D) Safeguarding and minimising resource use	Almost all the site (97%) is grade 3 agricultural land, which is the most common grade found throughout the district (approximately 64% of all land within the district is classed as grade 3). The loss of this land, which is not the most productive, is not considered to have a large negative impact.	-1		-1
E) Promoting economic	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
growth and employment	Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. However, this is a small scale proposal, and therefore only a neutral impact on this indicator has been scored.			
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base. The town centre is walkable, but is some distance from the site, but buses do pass by the adjoining main road. Whilst there may be some small positive benefit to local retail.	+1		+1
G) Meeting housing needs	This site makes a large contribution towards meeting the housing needs of the population of Crediton. The policy contains a requirement for 28% affordable housing. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance. The site sits adjacent to existing bus routes ensuring that residents who do not own a car can access services and facilities within the town.	+2		+2
H) Ensuring community health and wellbeing	Crediton has a wide variety of services, including doctor surgeries, schools and a non-emergency hospital. The town services are walkable, but some are a distance from the site. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. The recent opening of the Crediton link road is expected to alleviate air quality issues.	-1	The recent opening of the Crediton link road will allow residents living at the new development will not be required to drive through the town centre when accessing Exeter or Tiverton, as other routes will be available, thereby minimising any potential negative impact on local air quality. Overall, the impact is considered to be neutral.	0
I) Delivering the necessary infrastructure	The opening of the Crediton Link Road represents a significant upgrade to the local road network. It directs traffic away from the town centre and the canyon-like Exeter Road. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary	0	Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the towns which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within it's catchment area. Overall, the infrastructure is already in place, or nearing completion. The delivery of this site may put the primary schools under short-term pressure, but the development could support their longer-term expansion. The overall impact is therefore considered to be neutral.		facilities; overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	At present the extent of the built environment is relatively well contained within the landscape and is not often visually prominent. Allocation of edge of town of sites will help to meet Crediton's housing need but would likely have landscape impacts given the surrounding steep local topography. The development will help meet the housing needs in Crediton including affordable housing. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time for this site is 2 years. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Policy CRE4: The Woods Group, Exeter Road

A site of 0.17 hectares is allocated for eight residential dwellings, with mitigation for air quality issues, development that respects the character and setting of adjoining listed buildings and Conservation Area.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies within the settlement, within an already developed central location. There will be no landscape impacts. Given its highly urbanised nature, it is not anticipated that developing the site will have any negative impact on the natural environment.	0		0
B) Protection and promotion of a quality built and historic environment	There is a listed building to the north of the site, and the whole site is within the conservation area. The site at present is run-down, and detracts from the quality of some of the nearby older buildings. Generally, redevelopment of the site has the potential to enhance the local street scene and positively impact on the quality of the conservation area.	+1	Criteria seeks development that respects the character and setting of adjoining listed buildings and Conservation Area.	+1
C) Mitigating the effects of climate change	The site is located in flood zone 1, and is not in close proximity to the floodplain. Potential impact from surface water, a negative impact.	-1	The mitigating effect as a result of the inclusion of a Sustainable Urban Drainage (SUD) scheme has led to a neutral scoring.	0
D) Safeguarding and minimising resource use	This is a previously developed site, consisting of a number of low quality buildings. Redevelopment of this site is considered a positive outcome (even though the number of potential dwellings is low), reducing the reliance on the release of green field sites elsewhere.	+2	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance.	+2
E) Promoting economic growth and employment	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing. Housing development can boost local construction firms and associated trades who would benefit from being able to undertake contract work on the site. However, this is a small scale proposal, and therefore only a	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	neutral impact on this indicator has been scored.			
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base. The town centre is in close proximity, as is the supermarket at the southern end of the town. However, this is a small site, and whilst there may be some positive benefits.	+1		+1
G) Meeting housing needs	This site makes a contribution towards meeting the housing needs of the population of Crediton. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance. It is only a small scale proposal, therefore only a minor positive score has been proposed.	+1		+1
H) Ensuring community health and wellbeing	Crediton has a wide variety of services, including doctor's surgeries, schools and a non-emergency hospital. The site is located near the centre of Crediton, within easy walking distance of the town centre. A positive impact. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. The site is located on Exeter Road, which is one of the areas of highest air quality concern. The location of the site would mean that residents travelling to the site would not use the new link road if they were coming from the Tiverton direction, Exeter direction and through the centre of the town from the west. A negative impact. The site has a positive and negative impact, resulting in a neutral impact overall.	0		0
I) Delivering the necessary infrastructure	The provision of the Crediton Link Road represents a significant upgrade to the local road network. Access from Park Road only. Exeter road will require local widening and the raised footpath lowering to improve junction visibility. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an	0	Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	additional 240 places across the towns which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within it's catchment area. Overall, the infrastructure is already in place, or nearing completion. The delivery of a site of this size is unlikely to have a large impact on school places. The overall impact is therefore considered to be neutral.			

Secondary/cumulative/synergistic effects:	The development will help meet the housing needs in Crediton including affordable housing. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre. .
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time for this site is 1 year. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Policy CRE5: Pedlerspool, Exhibition Road

A site of 21 hectares at Pedlerspool could be allocated for 200 dwellings (including 28% affordable housing and at least five gypsy and traveller pitches), extra care housing comprising at least 25 dwellings, relocation of Crediton Rugby Club, a phasing strategy to ensure extra care housing and site for the sports pitch come forward broadly in set with housing, layout and design that reflects local distinctiveness, protect the setting of the Creedy Historic Park and garden and wider area, facilitation of access to local bus routes via sustainable travel modes, protection of TPO's and archaeological investigation.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site sits astride the boundary of two landscape character areas. The south western part falls within the 'lowland plains' area which is typified as being open, low lying, flat and agriculturally prosperous. The north east falls within the 'sparsely settled farmed valley floors' an area typified by the presence of rivers or streams and related flat or gently sloping valley bottoms. Development of the whole site would have a large impact on the landscape character of the area. Views to the site from the north and east are far reaching. A significant amount of landscaping and green infrastructure is proposed as part of the policy, in order to protect the upper slopes and shield parts of the site from inward views. The part of the site closest to the river is also designated as a priority habitat, being 'coastal and floodplain grazing marsh'. The site would also extend the built area of Crediton further to the north and east. At present the north-eastern boundary of the site is relatively well contained, shielding the built environment from being visible to the north and east. A number of protected trees are sited within the centre of the site.	-2	To mitigate the impacts on the landscape the policy includes provision for a significant amount of landscaping, with protection afforded for the most elevated and visible slopes to the south west of the site. Nevertheless, it is acknowledged that there will be impacts as a result of developing this site.	-1
B) Protection and promotion of a quality built and historic environment	The site sits to the east of Creedy Country Park, a locally important historic park and garden. The park shares a boundary running north-east to south-west with this site. The further to the north east, where the site is flatter, the park is already well screened from views from the east due to the presence of walls and continual tree cover along the boundary. To the south west of the boundary, the landscape is more open, and much more elevated. The potential impact along this section is therefore greater.	-2	The policy contains provisions that the setting of the upper slopes should be used for landscaping and green infrastructure accordingly. It is possible, however, that there may still be an impact on the adjoining park. The policy seeks layout, design and landscaping, including planting on the riverside that reflects the local distinctiveness and its sloping nature.	-1
C) Mitigating the effects of climate change	A small section along the north eastern boundary is within flood zone 2 and 3, and the remaining area of the site is within flood zone 1. Surface water run-off from the site could exacerbate periodic flooding of the River Creedy	-2	The policy requires the inclusion of a sustainable urban drainage scheme to ensure retention of all	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	to the north east of the site.		surface water from the site, to avoid increasing the risk of flooding. The inclusion of a Sustainable Urban Drainage (SUD) scheme is considered to mitigate an increase in flood risk, therefore an overall neutral impact has been scored.	
D) Safeguarding and minimising resource use	This is a large greenfield site, which is currently made up of a mixture of grade 2 and 3 agricultural land, of which 10.1ha is grade 2. Much of the farmland within the district is grade 3, however only approximately 11% of land falls with grade 2. The loss of the 10.1 hectares of productive land is a negative outcome of developing the site.	-2		-2
E) Promoting economic growth and employment	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact.	+1		+1
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base. Residents may make use of the town centre and supermarkets, thereby providing an added boost to local shopping. A positive impact is anticipated as a result.	+2		+2
G) Meeting housing needs	This site would make a significant contribution towards meeting the housing needs of the population of Crediton. The policy contains a requirement for 28% affordable housing and would also meet the needs of gypsies and travellers by providing at least five pitches. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance. It is a large scale proposal, and scores highly as a result.	+3		+3
H) Ensuring	Crediton has a wide variety of services, including doctor surgeries, schools	-1	The policy also contains provision	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
community health and wellbeing	and a non-emergency hospital. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. The opening of the Crediton Link Road represents a significant upgrade to the local road network. It directs traffic away from the town centre and the canyon-like Exeter Road.		for the relocation of the rugby club, and open space and other sports provision as part of the green infrastructure. This is considered to be a positive outcome.	
I) Delivering the necessary infrastructure	The opening of the Crediton Link Road represents a significant upgrade to the local road network. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the towns which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within it's catchment area. The delivery of this site may put the primary schools under short-term pressure, but the development could support their longer-term expansion. The overall impact is therefore considered to be neutral.	0	Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	At present the extent of the built environment is relatively well contained within the landscape and is not often visually prominent. Allocation of edge of town of sites will help to meet Crediton's housing need but would likely have landscape impacts given the surrounding steep local topography. The development will help meet the housing needs in Crediton including affordable housing. Development could contribute towards

	traffic in the town with consequential impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time for this site is 4 years. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Policy CRE6: Sports Fields, Exhibition Road

A site of 5.5 hectares at the sports field on Exhibition Road is allocated for 120 dwellings (including 28% affordable housing). The proposal would include relocation of the rugby club and associated pitches, archaeological investigation and implementation of a transport assessment.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This is a site that lies within the settlement, and therefore any impact on landscape character would be minimal. There are no known priority habitats or records of protected species nearby. The impact on the natural environment is likely to be neutral.	0		0
B) Protection and promotion of a quality built and historic environment	There are no known heritage assets in close proximity however the site does lie within an area of archaeological potential. Archaeological investigation could reveal more about the history of this site, though the subsequent development of the site would result in the permanent loss of any undiscovered archaeological remains.	-1/?	The policy requires archaeological mitigation prior to development of the site, in order to better understand the significance of the site's heritage. Overall, the application of this mitigation has resulted in impact on the historic environment.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1, and is not in close proximity to the floodplain. Surface water may increase due to development. A negative impact.	-1	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A neutral	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			impact has been scored.	
D) Safeguarding and minimising resource use	Though this site is used for recreational purposes, notionally it is a green field site, with potential to be used for agricultural purposes. Approximately 36% of the site falls within the grade 2 category, therefore being quality agricultural land. The remainder of the site is not categorised. Though notionally grade 2 in part, such a site, separated from other farmland, is unlikely to return to farming use unless there are significant demand changes within the industry. A negative outcome is therefore anticipated.	-2		-2
E) Promoting economic growth and employment	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing. Housing development can boost local construction firms and associated trades who would benefit from being able to undertake contract work on the site. However, a site of this size would have some positive impact on local building trades, and therefore a minor positive impact on this indicator has been scored.	+1		+1
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base. The town centre is in close proximity. However, this is a medium sized site, and whilst there may be some positive benefits to retail, overall the site has been scored as positive for this indicator.	+2		+2
G) Meeting housing needs	This site makes a contribution towards meeting the housing needs of the population of Crediton. The policy contains a requirement for 28% affordable housing. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance.	+3		+3
H) Ensuring community health and wellbeing	Crediton has a wide variety of services, including doctor's surgeries, schools and a non-emergency hospital. The town services are walkable, but some are a distance from the site. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. This is likely to be considerably alleviated now the new link road is	-1	The policy does stipulate the requirement for the implementation of a Transport Plan to minimise air quality impacts. Development of this site will only	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	complete. Therefore, it is anticipated that there is a slight negative impact associated with developing the site until the air quality of Crediton is re-assessed.		be able to take place once the rugby club (who currently make use of the site) have been relocated. This is stipulated within the policy, to ensure that there is no net loss to sports provision within the town.	
I) Delivering the necessary infrastructure	The provision of the Crediton Link Road represents a significant upgrade to the local road network. The requirement for a transport assessment is an uncertain effect. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the towns which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within it's catchment area. Overall, the infrastructure is already in place, or nearing completion. The delivery of a site of this size may have some impact on school places in the short term, but should be able to fund their longer-term expansion. The overall impact is therefore considered to be neutral.	0/?	Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	0/?

Secondary/cumulative/synergistic effects:	The development will help meet the housing needs in Crediton including affordable housing. Development could contribute towards traffic in the town with consequential

	impact on air quality within the town centre. .
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time for this site is 4 years. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Policy CRE7: Stonewall Lane

A site of 3.2 hectares at Stonewall Lane Playing Field is allocated for 50 dwellings (including 28% affordable housing). The policy requires the relocation of the playing fields to an alternative site, access requirements and highway alterations, archaeological investigation and the provision of a sustainable urban drainage system and arrangements for future maintenance.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies within the settlement, but is located in an elevated position along the town's northern boundary. It falls within the 'lowland plains' landscape character area, which is normally typified by being an open, low lying, flat and agriculturally prosperous area. The elevated nature of the site means there are wide views to be obtained looking south from the playing field. There would also be some landscape impacts when looking north towards the site. It is shielded by the woods to the north from views from that direction. The site is surrounding on three sides by housing, which would mitigate any impacts, though some may still arise.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review also provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	The site is located adjacent to Creedy Park listed on the local register of Historic Parks and Gardens. The site lies in an area of archaeological potential and in prominent position in the landscape where prehistoric activity is known from an enclosure site to the west. Any planning application for development here would need to be supported by a programme of archaeological work to allow an understanding of the significance of heritage assets that may be present here.	-2/?	Criteria within the policy seek mitigation measures through archaeological investigation.	0/?
C) Mitigating the effects of	The site is located in flood zone 1, and is not in close proximity to the floodplain. Development on the site may lead to surface water run-off, a	-1	The policy requires the inclusion of a sustainable urban drainage	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
climate change	negative impact.		scheme to reduce the impact of surface water run-off. This is considered to mitigate any flood risk that may arise.	
D) Safeguarding and minimising resource use	Though this site is used for recreational purposes, notionally it is a green field site, with potential to be used for agricultural purposes (though no agricultural grade exists for the site). Such a site, separated from other farmland, is unlikely to return to farming use unless there are significant demand changes within the industry. Given the loss of the land, a minor negative outcome is indicated.	-1		-1
E) Promoting economic growth and employment	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing. Housing development can boost local construction firms and associated trades who would benefit from being able to undertake contract work on the site. As a small scale proposal it is considered to have a neutral effect.	0		0
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base. Whilst there may be some positive benefits for retail, overall the site has been scored as minor positive for this indicator.	+1		+1
G) Meeting housing needs	This site makes a contribution towards meeting the housing needs of the population of Crediton. The policy contains a requirement for 28% affordable housing. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance. It is a medium scale proposal, therefore a positive score has been proposed.	+2		+2
H) Ensuring community health and wellbeing	Crediton has a wide variety of services, including doctors surgeries, schools and a non-emergency hospital. The town services are walkable, but some are a distance from the site. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. Now the link road is complete it is anticipated that air quality within the town centre will improve, overall the outcome of developing in this location	-1	Policy requires the relocation of the playing field to a suitable alternative site. Therefore, it is anticipated that there will be no overall negative impact associated with developing the site.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	could slightly negatively impact on air quality levels. Development of the site would result in the loss of the playing fields.			
I) Delivering the necessary infrastructure	The provision of the new Crediton Link Road represents a significant upgrade to the local road network. There are existing houses located to the south and west of the site. The only possible access points would be along the northern boundary which contains hedgerows and is bounded by a narrow single width track. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the towns which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within its catchment area. Overall a slight negative effect is possible.	-2	Access should be from Jockey Hill and diversion of Stonewall Lane through the site. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	At present the extent of the built environment is relatively well contained within the landscape and is not often visually prominent. Allocation of edge of town of sites will help to meet Crediton's housing need but would likely have landscape impacts given the surrounding steep local topography. The development will help meet the housing needs in Crediton including affordable housing. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time

	for this site is 2 years. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Policy CRE8: Land at Barn Park

A site of 1.64 hectares at Hunniver's Lane is allocated for 20 dwellings, including 28% affordable housing, with vehicular access being off Barn Park. For reference, this site was known as 'Land at Hunnivers Lane' in the 2013 SHLAA Report.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site lies adjacent to the south west side of the settlement. It falls within the 'lowland plains' landscape character area which is typified as being open, low lying, flat and agriculturally prosperous. The site abuts the existing built development off Barn Park, but the land slopes away to the south west offering wide views. However, this is a small development which would be mitigated by the adjacent housing, and landscape impacts therefore are considered to be minimal.	0		0
B) Protection and promotion of a quality built and historic environment	There are no known heritage designations in close proximity. Overall, impact against this indicator is neutral.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1, and is not in close proximity to the floodplain. The site also lies within very close proximity to the lower school, which may permit some children to walk to school, thereby lowering vehicular trip rates. Therefore, a slight positive impact has been assumed. Development may increase surface water flooding, a negative effect. Overall a neutral effect. Development on the site may increase surface water run-off. A negative effect.	-1	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance.	+1
D)	The site is located on existing farmland, which currently does not have an	-1/?		-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
Safeguarding and minimising resource use	agricultural land grade classification, an unknown impact. Development of the site would result in the permanent loss of the farmland and though this is a relatively small site, this would still be a minor negative impact.			
E) Promoting economic growth and employment	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing. Housing development can boost local construction firms and associated trades who would benefit from being able to undertake contract work on the site. However, this is a small scale proposal, and therefore only a neutral impact on this indicator has been scored.	0		0
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base. However, this is a small site, and whilst there may be some positive benefits, overall the site has been scored.	+1		+1
G) Meeting housing needs	This site makes a contribution towards meeting the housing needs of the population of Crediton. The policy contains a requirement for 28% affordable housing. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance. It is only a small scale proposal, therefore only a minor positive score has been proposed.	+1		+1
H) Ensuring community health and wellbeing	Crediton has a wide variety of services, including doctor's surgeries, schools and a non-emergency hospital. The town services are walkable, but some are a distance from the site. The Lower School is in close proximity to the site, which should enable children to walk to school. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. This is likely to be considerably alleviated now the new link road is complete. The close proximity of the site will enable children to walk to the lower school, and access other services offered on site. Therefore, it is anticipated that there will be no negative impact associated with developing the site.	0		0
I) Delivering the necessary	The provision of the Crediton Link Road represents a significant upgrade to the local road network. The Mid Devon Community Infrastructure Evidence	0	Policy requires a vehicular access coming off Barn Park. Policy S8 also	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
infrastructure	Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the towns which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within it's catchment area. Overall, the infrastructure is already in place, or nearing completion. The delivery of a site of this size is unlikely to have a large impact on school places. The local road infrastructure has limited capacity for additional development, therefore only a maximum of 20 dwellings have been specified for the site. The overall impact is therefore considered to be neutral.		provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	At present the extent of the built environment is relatively well contained within the landscape and is not often visually prominent. Allocation of edge of town of sites will help to meet Crediton's housing need but would likely have landscape impacts given the surrounding steep local topography. The development will help meet the housing needs in Crediton including affordable housing. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time for this site is 1 year. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Policy CRE9: Land at Alexandra Close

A site of 0.63 hectares at Land at Alexander Close is allocated for fifteen residential dwellings, including 28% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies within the settlement, and is surrounded by existing residential development (largely built in the 1960s/70s). It is not considered that there will be any landscape impacts as a result of developing the site. At this stage, the Council is not aware of the presence of protected species or habitats. A neutral impact is currently being assumed.	0		0
B) Protection and promotion of a quality built and historic environment	There are no heritage assets within the vicinity, nor is there evidence of any archaeological impacts from developing the site. Overall the outcome is therefore considered to be neutral.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1, and is not in close proximity to the floodplain. Development on the site may increase surface water flooding, a negative impact.	-1	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance.	0
D) Safeguarding and minimising resource use	This is a greenfield site located within the settlement. It is currently used for grazing sheep. Approximately half of the site is agricultural grade 2, the other half is graded 'urban' (and effectively has no grade). Grade 2 land is limited in Mid Devon (only 11% of land is grade 2), however the loss of 0.3ha is not considered to be significant. Given it is a greenfield site (though small in size), a slight negative impact has been assumed.	-2		-2
E) Promoting	The policy contains no commercial development proposals, however, there	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
economic growth and employment	is an economic benefit associated with the delivery of sites for housing. Housing development can boost local construction firms and associated trades who would benefit from being able to undertake contract work on the site. However, this is a small scale proposal, and therefore only a neutral impact on this indicator has been scored.			
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base (the town centre is in relatively close proximity). However, this is a small site, and whilst there may be some positive benefits for retail, overall the site has been scored as minor positivefor this indicator.	+1		+1
G) Meeting housing needs	This site makes a contribution towards meeting the housing needs of the population of Crediton. The policy contains a requirement for 28% affordable housing. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance. It is only a small scale proposal, therefore only a minor positive score has been proposed.	+1		+1
H) Ensuring community health and wellbeing	Crediton has a wide variety of services, including doctors surgeries, schools and a non-emergency hospital. The town services are walkable, but some are a distance from the site. The Upper School is in close proximity to the site, which should enable children to walk to school. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. The site is located on the west of Crediton, and any traffic accessing the high street, or heading for Tiverton, Exeter or beyond will need to drive through the town centre, thereby potentially having a low but negative impact on air quality. However, given the small size of the development, this impact is likely to be very low. Overall, it is anticipated that there will be no negative impact associated with developing the site.	0		0
I) Delivering the necessary infrastructure	The provision of the Crediton Link Road represents a significant upgrade to the local road network. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education	0	Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the towns which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within it's catchment area. Overall, the infrastructure is already in place, or nearing completion. The delivery of a site of this size is unlikely to have a large impact on school places. The overall impact is therefore considered to be neutral.		bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	The development will help meet the housing needs in Crediton including affordable housing. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time for this site is 1 year. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Policy CRE10: Land south of A377

A site of 1.9 hectares south of the A377 could be allocated for 7,600 square metres of commercial floorspace.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies on the southern edge of the settlement, falling within the 'sparsely settled and farmed valley floors' landscape character area, being an area typified by the presence of streams or rivers. The site is largely flat, reflecting its proximity to the floodplain to the south. Development of the site would be visible on the approach into Crediton along the A377, and from the higher ground to the south. The flat nature of the site could allow it to be well-screened to mitigate some of the impact. In terms of biodiversity, some of the site (particularly the southern element) has the potential to be a priority habitat, being floodplain grazing marsh.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review also provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	This area has already been subject to a programme of archaeological investigation and any further development would not have any impact. The historic estate of Downes lies to the north east of the site though the intervening topography screens the park from any potential impact as a result of developing this site. No impact is anticipated.	0		0
C) Mitigating the effects of climate change	The site is located in close proximity to the flood zones associated with the River Yeo. Flood zone 3 lies to the south of the site, whilst zone 2, crosses over a small part of the sites south eastern boundary. The SFRA (2014) shows surface water problems running through the central part of the site from the east to near the western edge of the site where an unnamed watercourse provides potential flooding which adds to the uncertainty of the impact. Overall a slight negative effect is considered.	-1/?	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. This is considered to mitigate any negative flood risk impact associated with developing the site.	0/?
D) Safeguarding and minimising resource use	This is a greenfield site which is agricultural grade 3. This is the most common grade found throughout the district, accounting for approximately 64% of all land. Though of reasonable quality, its loss is only considered to be a slight negative impact.	-1		-1
E) Promoting	The policy contains provision for over 5,820 square metres of employment	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
economic growth and employment	floorspace. Crediton has had limited employment development within recent years, and this site could meet a large proportion of the town's employment needs and creating local jobs.			
F) Supporting retail	The policy contains no specific retail proposals, however, retail does fall within the overall definition of commercial development. It is possible, therefore, that retail proposals could come forward on these sites if allocated. However, the any such proposals would also need to be considered against the sequential test set down in the 'Development outside town centres' policy. This should mitigate any harmful impacts against existing retail.	0		0
G) Meeting housing needs	The policy contains no housing proposals. No impact is anticipated.	0		0
H) Ensuring community health and wellbeing	Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. Option will contribute towards light and noise pollution, a slight negative effect. The site is located off the A377, in close proximity to the newly opened link road. Employment traffic generated by the site will be able to make use of the link road (when heading towards Tiverton), or via the A377 direct to Exeter, only needing to drive through the town centre when heading west along the A377. There will likely be some negative off-site air quality impacts as a result however.	-1		-1
I) Delivering the necessary infrastructure	The new provision of the Crediton Link Road represents a significant upgrade to the local road network. Overall, the infrastructure is already in place, or nearing completion.	0	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The development will help meet the employment needs in Crediton. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years),	Within the short term, construction traffic associated with the development will

Medium (6-15 years) Long (15+ years)	contribute towards traffic increase within the town. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide employment within Crediton. Development would be focussed in Crediton, the third town in the district.

Policy CRE11: Crediton Infrastructure

The Council will use CIL and planning obligations and where appropriate external sources of funding to deliver the following infrastructure; enhanced pedestrian and cycle facilities to serve development, bus service enhancements, air quality improvements, and expansion of primary and secondary education, emergency fire and rescue services, library reconfiguration to provide Devon Centre, extra care housing and community facilities.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	No anticipated effects.	0		0
B) Protection and promotion of a quality built and historic environment	No anticipated effects.	0		0
C) Mitigating the effects of climate change	The policy will support enhanced pedestrian and cycle facilities to serve development, a positive effect.	+2		+2
D) Safeguarding and minimising resource use	No anticipated effects.	0		0
E) Promoting economic growth and employment	No anticipated effects.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
F) Supporting retail	No anticipated effects.	0		0
G) Meeting housing needs	The policy supports the provision of extra care housing, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	The Council will use CIL and planning obligations and where appropriate external sources of funding to deliver the following infrastructure; enhanced pedestrian and cycle facilities to serve development, air quality improvements, emergency fire and rescue services, library reconfiguration to provide Devon Centre and community facilities (children / youth). This is all infrastructure required to ensure Crediton's community health and wellbeing over the course of the Plan period, a significant positive effect.	+3		+3
I) Delivering the necessary infrastructure	The Council will use CIL and planning obligations and where appropriate external sources of funding to deliver the following infrastructure; enhanced pedestrian and cycle facilities to serve development, bus service enhancements and expansion of primary and secondary education. This is all infrastructure required to deliver Tiverton's strategic growth over the course of the Plan period, a significant positive effect.	+3		+3

Secondary/cumulative/synergistic effects:	This policy supports many of the other Tiverton policies and collects funds towards necessary pieces of local infrastructure. This infrastructure is required to mitigate traffic impacts associated with existing and future developments in the town.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	The policy will have impacts over the lifetime of the plan, as monies will be gathered during all periods with development only likely to take place in the longer term.
Spatial extent: (District wide / local)	The impacts of the policy are likely to be wider than just Tiverton – as improvements to Tiverton's infrastructure / community facilities will serve a wider rural catchment.

Crediton Alternative Site Options

Land at Westwood Farm, Crediton

Option

A site of 3.5 hectares at Westwood Farm could be allocated for 50 dwellings (including 28% affordable housing). Access would either be from Westernlea, or direct from the A377, and the site would need to be subject to archaeological mitigation and the inclusion of a sustainable urban drainage scheme.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies on the western edge of the town and falls within the 'lowland plains' landscape character area. These areas are typified by being low lying, generally flat and agriculturally prosperous. This site is quite steeply sloping, and there is the possibility of wider landscape impacts by expanding the town further to the west. This could be particularly felt given the elevated nature of the site in comparison with the adjoining housing to the east. The site is at a lower level than then A377 which runs along the northern boundary, with limited views in when approaching along the main road. Nevertheless, given the sloping nature of the site, there will be some impact on the surrounding landscape.	-1	Appropriate landscaping to mitigate visual impacts associated with developing the site and protection of the upper slopes to reduce visual impact.	0
B) Protection and promotion of a quality built and historic environment	There are no known heritage assets in close proximity; however the site does lie within an area of archaeological potential. Archaeological investigation could reveal more about the history of this site, though the subsequent development of the site would result in the permanent loss of any undiscovered archaeological remains.	-1/?	The policy therefore requires archaeological mitigation prior to development of the site, in order to better understand the significance of the site's heritage. Overall, the application of this mitigation has resulted in a reduced but neutral impact on the historic environment.	0/?
C) Mitigating the effects of climate change	The site is mainly located in flood zone 1, with a small portion of the site in the east in flood zone 3. A negative impact. Development on the site may increase surface water run-off without mitigation, a negative impact. An unnamed watercourse flows through the site which may cause flooding, an	-2/?	The policy requires the inclusion of a sustainable urban drainage scheme to reduce the impact of surface water run-off. This is	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	uncertain impact.		considered to mitigate any flood risk that may arise.	
D) Safeguarding and minimising resource use	This is an agricultural site, all of which is categorised as grade 3 land. The majority of agricultural land within the district falls within this category. Therefore, a slight negative impact has been assumed given the potential loss of this land.	-1		-1
E) Promoting economic growth and employment	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing. Housing development can boost local construction firms and associated trades who would benefit from being able to undertake contract work on the site. As a small scale proposal it is considered to have a neutral effect.	0		0
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base. The town centre is in relatively close proximity, however, whilst there may be some positive benefits, overall the site has been scored as minor positive for this indicator.	+1		+1
G) Meeting housing needs	This site makes a contribution towards meeting the housing needs of the population of Crediton. The policy contains a requirement for 28% affordable housing. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance. It is a medium scale proposal, therefore a positive score has been proposed.	+2		+2
H) Ensuring community health and wellbeing	Crediton has a wide variety of services, including doctors surgeries, schools and a non-emergency hospital. The Upper School is in relative close proximity to the site, which should enable children to walk to school. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. The site is located on the west side of the town, and any traffic generated by the site travelling to Tiverton, Exeter or the M5 would pass through the High Street, thereby potentially further exacerbating existing air quality issues. Now the link road is complete it is anticipated that air quality within the town centre will	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	improve, overall the outcome of developing in this location could slightly negatively impact on air quality levels.			
I) Delivering the necessary infrastructure	The provision of the new Crediton Link Road represents a significant upgrade to the local road network. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the towns which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within its catchment area. Overall a slight negative effect is possible.	-1	Access from Westernlea via Threshers, or direct from A377. The total number of dwellings for the site has been limited to take account of the capacity of the existing road infrastructure. The overall impact is therefore considered to be neutral. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The development will help meet the housing needs in Crediton including affordable housing. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre. At present the extent of the built environment is relatively well contained within the landscape and is not often visually prominent. Allocation of edge of town of sites will help to meet Crediton's housing need but would likely have landscape impacts given the surrounding steep local topography.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time for this site is 2 years. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Land at Chapel Down Farm, Crediton

Option

A site of 10 hectares could be allocated for 120 dwellings (of which 28% would be affordable). The policy contains a requirement for substantial improvements to the local road network, archaeological investigation and provision of a sustainable urban drainage scheme.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This is a prominent site lying on the western boundary of the town. It is steeply sloping, with the northern element being considerably higher than the southern part of the site. The site falls within the 'lowland plains' landscape character area, being characterised by being part of a generally low lying, agricultural landscape. When viewing the town from further to the west, views of the existing built environment are limited by the topography, with the most westerly development, Queen Elizabeth Drive, being partly screened from view by its location within a fold in the landscape. This site is more prominent, and would visibly extend the built environment, with the potential for it to be seen from distant viewpoints. A lower density of housing has been assumed, which could ensure that the development is focused away from the most prominent elements. Generally though, there would be a large landscape impact as a result of developing this site.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review also provide some mitigation therefore a slightly negative effect is considered.	-1
B) Protection and promotion of a quality built and historic environment	Chapel Downs Farmhouse is a listed building which sits adjacent to the site. The farm complex would once have been more separate from the town, but over the years residential growth has brought the site within Crediton's urban fringe. Development of the surrounding agricultural land will further impact on the setting of the building, with the potential to reduce its significance. The site also contains a probable prehistoric enclosure, which requires further archaeological investigation.	-2/?	Protection of the setting of the listed Chapel Downs Farmhouse. The policy therefore requires appropriate archaeological investigation prior to any development taking place. Overall, however, development of the site has the potential to slightly negatively impact on the historic environment.	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	The site is located in flood zone 1, a neutral impact. The steep topography combined with development of the site could lead to potential off-site impacts due to surface water run-off.	-1	The policy therefore includes a sustainable urban drainage scheme to retain all on-site water. This is considered to mitigate any potential impact and therefore a neutral score has been assumed.	0
D) Safeguarding and minimising resource use	This is a greenfield site on the edge of the settlement. The northern portion of the site is agricultural grade 2, whilst the southern (and larger) portion is grade 3. Only 11% of land within the district is grade 2. The loss of several hectares of this valuable land is a sustainability concern for the long-term retention of quality agricultural land within the district. A negative outcome has therefore been scored.	-2		-2
E) Promoting economic growth and employment	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing. Housing development can boost local construction firms and associated trades who would benefit from being able to undertake contract work on the site. However, this is a large proposal, and therefore a positive knock-on effect on local construction could be anticipated.	+1		+1
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base. The town centre is in relatively close proximity, and would be walkable. Given the number of dwellings on site it could be assumed that there would be an associated retail boost for the high street and local supermarkets.	+2		+2
G) Meeting housing needs	This site would make a large contribution towards meeting the housing needs of the population of Crediton. The policy contains a requirement for 28% affordable housing. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance. It is a large scale proposal, therefore a high positive score has been proposed.	+3		+3
H) Ensuring	Crediton has a wide variety of services, including doctors surgeries, schools	0	Sensitive location of dwellings to	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
community health and wellbeing	and a non-emergency hospital. The town services are walkable, but some are a distance from the site. The Upper School is in relatively close proximity to the site, which should enable children to walk to school. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. The site is located on the west side of the town, and any traffic generated by the site travelling to Tiverton , Exeter or the M5 would pass through the High Street, thereby potentially further exacerbating existing air quality issues. Now the link road is completed it is anticipated that air quality within the town centre will improve, overall the outcome of developing in this location could negatively impact on air quality levels. There are some positive and negative impacts, however on balance a neutral impact has been assumed.		reduce overlooking of the existing adjacent properties on Queen Elizabeth Drive.	
I) Delivering the necessary infrastructure	The new Crediton Link Road represents a significant upgrade to the local road network. The policy includes provisions for substantial upgrades to Higher Road. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the towns which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within its catchment area. Overall a negative effect is possible.	-2	Criteria require access to the eastern part of the site to include substantial improvements to High Road, and access onto the A377 to include improvements to provide pedestrian facilities connecting the site to the town. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The development will help meet the housing needs in Crediton including affordable housing. Development could contribute towards traffic in the town with consequential

	impact on air quality within the town centre. At present the extent of the built environment is relatively well contained within the landscape and is not often visually prominent. Allocation of edge of town of sites will help to meet Crediton's housing need but would likely have landscape impacts given the surrounding steep local topography.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time for this site is 3 years. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Barnfield, Crediton

Option

A site of 0.25 hectares could be allocated for six residential dwellings. The policy stipulates that access would need to come via Town Park, and that development would need to include a sustainable urban drainage scheme.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies within the settlement and currently comprises a strip of land which is under-used, being located at the rear of properties on Barnfield, within an area which already has nearby existing residential development. Though the site is visible given its elevated location, the adjoining housing to the west and south (which is higher up the hillside) would mitigate any landscape impacts. Given the site is generally unused and overgrown land, there is the potential for the presence of a variety of species, including potentially protected species. A neutral impact is considered.	0		0
B) Protection and promotion of a quality built and historic environment	The site sits to the south of the Crediton Conservation Area, with a number of listed buildings along the high street. There is existing development adjacent to the site. The development of a small number of dwellings in this location is unlikely to affect the setting of these buildings, given the widespread development that has already taken place on the south side of the high street, and up the slopes of the hillside. The site is located in an	-2/?	Include requirement for archaeological investigation to take place prior to development of the site.	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	area of archaeological potential, with the rear of the plots along the high street, being within the historic core of the town. Therefore, the impact is considered to be negative, as developing the site could result in the loss of the archaeological features.			
C) Mitigating the effects of climate change	The site is located in flood zone 1, and is not in close proximity to the floodplain. Development may cause surface water flooding, a negative impact.	-1	The policy requires the inclusion of a sustainable urban drainage scheme to reduce the impact of surface water run-off. This is considered to mitigate any flood risk that may arise.	0
D) Safeguarding and minimising resource use	Whilst not a previously developed site, this is an area with no agricultural land classification an unknown impact. It is an under-utilised area of land adjacent to Town Park and on the southern side of the High Street. Use of such sites for housing will reduce the need to allocate greenfield sites elsewhere. Therefore, a small positive impact has been assumed.	+1/?		+1/?
E) Promoting economic growth and employment	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing. Housing development can boost local construction firms and associated trades who would benefit from being able to undertake contract work on the site. However, this is a small scale proposal, and therefore only a neutral impact on this indicator has been scored.	0		0
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base, especially given the close proximity of the site. However, this is a small site, and whilst there may be some positive benefits, overall the site has been scored as slightly positive for this indicator.	+1		+1
G) Meeting housing needs	This site makes a contribution towards meeting the housing needs of the population of Crediton. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance. It is only a small scale	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	proposal, therefore only a minor positive score has been proposed.			
H) Ensuring community health and wellbeing	Crediton has a wide variety of services, including doctor surgeries, schools and a non-emergency hospital. Both schools are in close proximity to the site, which should enable children to walk to school. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. Now the link road is completed it is anticipated that air quality within the town centre will improve, overall the outcome of developing in this location could negatively impact on air quality levels. Traffic generated by the site would need to drive through the town centre if travelling on to Exeter, Tiverton or further afield. However, many services and facilities are within walking distance of the site, which is considered a positive impact.	+1		+1
I) Delivering the necessary infrastructure	The new Crediton Link Road represents a significant upgrade to the local road network. The site should be accessed from Town Park. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the towns which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within it's catchment area. Overall a slight negative effect is possible.	-1	Site is subject to a suitable vehicular access being achievable. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The development will help meet the housing needs in Crediton including affordable housing. Development could contribute towards traffic in the town with consequential

	impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time for this site is 1 year. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Land south of Commonmarsh Lane, Crediton

Option

A site of 2.74 hectares could be allocated for 5,740 square metres of commercial floorspace. The policy would require there to be suitable vehicular access, provision of a sustainable urban drainage scheme and retention of areas within the floodplain as green infrastructure.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies on the eastern edge of Crediton, and falls within the 'lowland plains' landscape character area which is typified by generally being low lying, flat and agriculturally prosperous. The site slopes upwards towards the south, and would extend the area covered by the existing industrial estate further up the hillside. There would be a landscape impact when viewing the site from the north, as the hillside, and particularly the upper slopes, are visible from afar. Biodiversity records state that there may be the presence of badgers on part of the site. Given the potential landscape and biodiversity impacts, a negative score has been assumed.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review also provide some mitigation. A slight negative impact is considered post mitigation.	-1
B) Protection and promotion of a quality built and historic environment	Within or near to the site lies a possible pre-historic or Romano-British enclosure, with the potential for further deposits to be found in the area. The Downes estate, a locally important historic park and garden which includes a grade II* farmhouse lies adjacent to the site to the south. The intervening topography between the site and the estate should protect the setting of the park and garden, which lies behind the ridge line to the south of the site. A negative impact has been assumed given the potential disturbance of the archaeological remains in the area and the possibility of an impact on the Downes Estate.	-2/?	Include requirement for archaeological investigation to take place prior to development of the site. Include requirement for any development to ensure the protection of the setting of Downes estate. However due to the uncertainty of archaeological remains and visual impacts on	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			heritage assets, a slight negative but uncertain impact is considered.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 on elevated land. The floodplain of the River Creedy lies to the east. The increase in surface water run-off as a result of developing the site could have off-site impacts.	-1	The policy therefore requires the inclusion of a sustainable urban drainage scheme to reduce the impact of surface water run-off. This is considered to mitigateany negative impact.	0
D) Safeguarding and minimising resource use	This is a greenfield site which falls within agricultural land grade 2. Approximately only 11% of land within the district is this grade (grade 2 is high quality agricultural land). Though not a particularly large site, the loss of land of this quality is a negative impact of developing this site.	-2		-2
E) Promoting economic growth and employment	The policy contains provision for over 5,740 square metres of employment floorspace. Crediton has had limited employment development within recent years, and this site could meet a large proportion of the town's employment needs and creating local jobs.	+2		+2
F) Supporting retail	The policy contains no specific retail proposals, however, retail does fall within the overall definition of commercial development. It is possible, therefore, that retail proposals could come forward on these sites if allocated. However, the any such proposals would also need to be considered against sequential test set down in the 'Development outside town centres' policy. This should mitigate any harmful impacts against existing retail.	0		0
G) Meeting housing needs	The policy contains no housing proposals. No impact is anticipated.	0		0
H) Ensuring community health and wellbeing	Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. The site is located adjacent to the existing industrial estate and in close proximity to the new link road. Employment traffic generated by the site will be able to make use of the	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	link road (when heading towards Tiverton), or via the A377 direct to Exeter, only needing to drive through the town centre when heading west along the A377. There will likely be some negative off-site air quality impacts as a result however.			
l) Delivering the necessary infrastructure	The provision of the Crediton Link Road represents a significant upgrade to the local road network. Overall, the infrastructure is already in place, or nearing completion.	0	Site is subject to a suitable vehicular access being achievable. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	At present the extent of the built environment is relatively well contained within the landscape and is not often visually prominent. Allocation of edge of town of sites will help to meet Crediton's employment need but would likely have landscape impacts given the surrounding steep local topography. The development will help meet the employment needs in Crediton. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide employment within Crediton. Development would be focussed in Crediton, the third town in the district.

Land east of Exeter Road, Crediton

Option

A site of 5.3 hectares could be allocated for 11,130 square metres of commercial floorspace. The policy would require there to be suitable vehicular access, provision of a sustainable urban drainage scheme and retention of areas within the floodplain as green infrastructure.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies on the eastern edge of Crediton, and falls within the 'lowland plains' landscape character area which is typified by generally being low lying, flat and agriculturally prosperous. The site is steeply sloping, particularly within the south west. It is highly visible from the south west, but is bounded by hedgerows to the east. Generally the site is elevated, and there would be landscape impacts as a result of seeing it developed. There are no natural environment designations within or in close proximity to the site. A negative impact is considered based on the potential impact on the wider landscape.	-2	Requirement for landscaping along the western boundary to protect setting of the conservation area and the listed Fair Park House. The site will still have slight negative impact post mitigation.	-1
B) Protection and promotion of a quality built and historic environment	There is no known archaeological significance attached to this site. The site does lie adjacent to the conservation area to the west, which contains a number of listed buildings, including the house and walled garden of Fair Park immediately adjacent. The elevated nature of the site means there is potential for development to impact on the historic setting of the adjacent buildings along Exeter Road.	-1		-1
C) Mitigating the effects of climate change	The site is located in flood zone 1 on elevated land. The floodplain of the River Creedy lies further to the east, whilst the River Yeo is some distance to the south. The increase in surface water run-off as a result of developing the site could have off-site impacts.	-1	The policy therefore requires the inclusion of a sustainable urban drainage scheme to reduce the impact of surface water run-off. This is considered to mitigate any negative impact.	0
D) Safeguarding and minimising resource use	This is a greenfield site. Only part of the site has been classified with an agricultural grade, an unknown impact. The southern element of the site, comprising 3.4 hectares is agricultural grade 3. This is the most common grade found throughout the district, accounting for approximately 64% of all land. Though of reasonable quality, its loss is only considered to be a minor negative impact.	-1/?		-1/?
E) Promoting economic growth and	The policy contains provision for over 11,130 square metres of employment floorspace. Crediton has had limited employment development within recent years, and this site could meet a large proportion of the town's	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
employment	employment needs and creating local jobs.			
F) Supporting retail	The policy contains no specific retail proposals; however, retail does fall within the overall definition of commercial development. It is possible, therefore, that retail proposals could come forward on these sites if allocated. However, the any such proposals would also need to be considered against sequential test set down in the 'Development outside town centres' policy. This should mitigate any harmful impacts against existing retail.	0		0
G) Meeting housing needs	The policy contains no housing proposals. No impact is anticipated.	0		0
H) Ensuring community health and wellbeing	Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. The site is located adjacent to the existing industrial estate and in close proximity to the new link. Employment traffic generated by the site will be able to make use of the link road (when heading towards Tiverton), or via the A377 direct to Exeter, only needing to drive through the town centre when heading west along the A377. There will likely be some negative off-site air quality impacts as a result however.	-1		-1
I) Delivering the necessary infrastructure	The provision of the Crediton Link Road represents a significant upgrade to the local road network. Overall, the infrastructure is already in place, or nearing completion.	0	Site is subject to a suitable vehicular access being achievable. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	At present the extent of the built environment is relatively well contained within the landscape and is not often visually prominent. Allocation of edge of town of sites will help to meet Crediton's employment need but would likely have landscape impacts

	given the surrounding steep local topography. The development will help meet the employment needs in Crediton. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide employment within Crediton. Development would be focussed in Crediton, the third town in the district.

Fairpark House, Crediton

Option

A site of 1.2 hectares could be allocated for 48 dwellings (of which 28% are to be affordable).

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies within the settlement limit of Crediton and is bounded on the western boundary be existing development. There is potential for landscape issues as the site is on a slope facing west, however it is currently well screened by a hedgerow. A slight negative impact is considered.	-1	To mitigate the impacts on the landscape the policy includes provision for a significant amount of landscaping, with protection afforded for the most elevated and visible slopes to the south west of the site.	0
B) Protection and promotion of a quality built and historic environment	The site is located within the Crediton Conservation Area. Fairpark House and Gardens, as well as the Yard Wall are Grade II Listed and development would need to consider the setting of these heritage assets and other Listed buildings to the west of the site along Exeter Road. The impact on the built environment would depend on the design of the development and therefore a level of uncertainty remains.	-2/?	The policy contains provisions that development should respect the setting of Fairpark House. Development is subject to layout, design and landscaping that reflects the sloping, visible nature of the site, locally distinctive design and the need to protect the setting and character of the Crediton conservation area and the nearby	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			Listed Buildings. Given the position of the development a slight negative impact is considered. An uncertain effect remains as this impact will depend on the design.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 and is not in close proximity to the floodplain. A neutral effect. Development on the site may increase surface water run-off. A negative effect. Crediton has a good bus and train links. A positive effect.	+1	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance.	+2
D) Safeguarding and minimising resource use	The site is currently a greenfield site with 25% classed as Grade 3 and the remainder of the site not having an agricultural land grade. The loss of the Grade 3 land, although not the highest quality of agricultural land, would have a negative impact on this indicator. The unknown grade of agricultural land for the remainder of the site provides an unknown impact.	-1/?		-1/?
E) Promoting economic growth and employment	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact.	+1		+1
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base. The town centre is walkable, but is some distance from the site. A positive impact.	+1		+1
G) Meeting housing needs	This site makes a contribution towards meeting the housing needs of the population of Crediton. The policy contains a requirement for 28% affordable housing. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance. The site sits adjacent to existing bus	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	routes ensuring that residents who do not own a car can access services and facilities within the town.			
H) Ensuring community health and wellbeing	Crediton has a wide variety of services, including doctors surgeries, schools and a non-emergency hospital. The site is located quite close to the town centre, within easy walking distance to services. A positive impact. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. This is likely to be considerably alleviated now that the new link road is complete. Residents living at the new development coming from the west or Tiverton may not use the link road, adding to the air pollution in Crediton. A negative impact. Overall, the impact is considered to be neutral.	0		0
I) Delivering the necessary infrastructure	The provision of the Crediton Link Road represents a significant upgrade to the local road network. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the town which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within its catchment area. Overall, the infrastructure is already in place, or nearing completion. The delivery of a site of this size is unlikely to have a large impact on school places. The overall impact is therefore considered to be neutral.	0		0

Secondary/cumulative/synergistic effects:	The development will help to meet the housing need within Crediton including

	affordable housing. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Higher Road, Crediton

Option

A site of 0.9 hectares could be allocated for 36 dwellings (of which 28% are to be affordable).

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is a greenfield with no agricultural land classification. The site is located in to the north of Crediton on a rise of land. Part of the site would be opposite an open green field to the south and the whole site is adjacent ancient woodland to the north. Overall a slight negative impact.	-1	To mitigate the impacts on the landscape the policy includes provision for a significant amount of landscaping, with protection afforded for the most elevated and visible slopes to the south west of the site.	0
B) Protection and promotion of a quality built and historic environment	The site lies to the north of the settlement limit of Crediton. Development in this location would lead to the built environment to the north of Higher Road, a negative impact is considered. Currently there is limited development on this side of the road and nearby development is low density. The development would not have much of a visual impact due to the lay of the land. A neutral impact. Overall a slight negative impact.	-1	Policy DM1 will ensure the development is subject to layout, design and landscaping which would reduce the impact of the site. A neutral impact.	0
C) Mitigating the effects of climate change	The site is located in flood zone 1 and is not in close proximity to the floodplain. A neutral effect. Development on the site may increase surface water run-off. A slightly negative effect. Crediton has a good bus and train links. A positive effect.	+1	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			run-off and arrangements for future maintenance.	
D) Safeguarding and minimising resource use	The site is a greenfield, however there is not agricultural class associated with the site. A negative or unknown impact.	-1/?		-1/?
E) Promoting economic growth and employment	The policy contains no commercial development proposals, however, there is an economic benefit associated with the delivery of sites for housing. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact.	+1		+1
F) Supporting retail	The policy contains no retail proposals. Future residents of the site may undertake their shopping within the town centre, providing it with an additional customer base. The town centre is walkable, but is some distance from the site. A positive impact.	+1		+1
G) Meeting housing needs	This site makes a contribution towards meeting the housing needs of the population of Crediton. The policy contains a requirement for 28% affordable housing. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance.	+1		+1
H) Ensuring community health and wellbeing	Crediton has a wide variety of services, including doctors surgeries, schools and a non-emergency hospital. The site is located quite far from the town centre but is considered to be within a walkable distance. A positive impact. Crediton is currently designated as an Air Quality Management Area, due to poor air quality within the town centre. This is likely to be considerably alleviated now that the new link road is complete and residents travelling to and from Exeter could use this route. The location of the site would result in residents not driving through the centre of the town when travelling to the west or to Tiverton. There will likely be some negative off-site air quality impacts as a result however. Overall a neutral impact.	0		0
I) Delivering	The provision of the Crediton Link Road represents a significant upgrade to	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
the necessary infrastructure	the local road network. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for primary education expansion in the town of Crediton itself, with the two primary schools there, being Hayward's and Landscore both admitting more than their planned admission number. In order to support the demographic and housing growth both local schools need to expand to 420 places thus creating an additional 240 places across the town which will need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. The Queen Elizabeth's Academy School is currently forecast to have approximately 297 places available in the medium term. There should be sufficient pupil capacity at Queen Elizabeth's to accommodate the development allocated within its catchment area. Overall, the infrastructure is already in place, or nearing completion. The delivery of a site of this size is unlikely to have a large impact on school places. The overall impact is therefore considered to be neutral.			

Secondary/cumulative/synergistic effects:	The development will help to meet the housing need within Crediton including affordable housing. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Crediton including for affordable housing. Development would be focussed in Crediton, the third town in the district.

Villages: Preferred Site Allocations and Alternative Site Options

Bampton

Policy BA1: Newton Square, Bampton

Land with a gross site area of 0.25 (ha) at Newton Square, Bampton is proposed for 5 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is within the centre of a settlement and there is likely to be no impact on landscape character, a neutral effect.	0		0
B) Protection and promotion of a quality built and historic environment	There are many listed buildings within the centre of Bampton, though these are not likely to be affected by developing this site. The site area in an area of archaeological potential within the historic core of Bampton and Bampton Conservation Area. Overall negative and uncertain effect is considered.	-2/?	A criterion within the policy seeks design which respects and enhances the character and appearance of the Conservation Area. The policy also requires archaeological investigation and appropriate mitigation, overall a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	Of the original site area, 0.2 ha (67% South West) of the site is located in flood zone 1 and 0.1ha (33% North East) of the site is located in flood zone 2 and 3. The site boundary has been amended and now the whole of the site is in flood zone 1. In close proximity to the northern boundary is an area of	-1	The site area has been amended to remove the area in flood zone 2 and 3. A policy requirement in the Local Plan seeks mitigation	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	flood zone 2 and 3. The site could contribute to surface water run off without appropriate mitigation measures. Bampton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service overall a slight negative effect is considered.		measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Overall a neutral effect. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on brownfield land, a positive effect.	+2		+2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact	0	The policy makes provision for the parking of delivery vehicles serving the convenience store at 4-6 Newton Square, overall a positive effect.	+2
G) Meeting housing needs	Option provides for 5 new dwellings with 30% affordable housing, a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Bampton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
I) Delivering the necessary infrastructure	Site access is achievable from Newton Court. The Mid Devon Community Infrastructure Evidence Report indicates that the primary school can accommodate additional pupils arising from this development without expansion. Given the small scale of development it is anticipated that this development will not as an individual site put pressure on the local secondary schools. Overall a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bampton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Policy BA2: Stone Crushing Works (Scotts Quarry), Bampton

Land with a gross site area of 0.45 (ha) at Stone Crushing Works (Scotts Quarry), Bampton is proposed for a mixed use of 18 residential dwellings with 30% affordable housing and 355 sqm commercial floorspace.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is within the settlement limit and is screened from the surrounding area. The presence of the existing development on the adjoining employment and housing development already provides a level of mitigation against any impact. The site is very enclosed by the boundary trees with only short views into and from the site permitted. The impact would be very limited. As there may be some loss of trees a slight negative impact is considered.	-1	The policy requires the protection of mature trees within the site. Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan also provide some mitigation therefore a neutral effect is considered.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Groundwater flooding maps also shows up to 25% chance of groundwater emergence within the site boundary. Bampton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service overall a slight negative effect is considered.	-1	Based on recommendations provided by Devon County Council, groundwater monitoring is not required for this site, provided that necessary details are submitted with a drainage strategy. A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	The site is on grade 4 poor agricultural land. The remainder of the site is a spoil heap. The history of quarrying at the site highlights the possibility of the presence of contaminated land a negative effect overall.	-2	The policy requires the removal of the spoil heap and the assessment of land contamination and remediation where appropriate. Overall a positive effect.	+2
E) Promoting economic growth and employment	The policy provides for 355 sqm of commercial floorspace a positive impact.	+2		+2
F) Supporting	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
retail				
G) Meeting housing needs	Option provides for 18 new dwellings with 30% affordable housing a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Bampton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. There may be concerns with locating housing the other side of the existing employment site, where the amenity of residents could be affected by employment activities, e.g. noise levels, deliveries etc. HGVs accessing the site and driving through the centre of the village could also potentially affect air quality. Overall a slight negative effect.	-1	DM4 Pollution provides mitigation for the potential impact of HGVs therefore a neutral effect is considered.	0
I) Delivering the necessary infrastructure	The site has an existing access. The Mid Devon Community Infrastructure Evidence Report indicates that there is sufficient capacity in the local schools. Given that a road access is in place and provision of education capacity is possible an overall neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site have the potential to impact upon traffic congestion. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bampton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing and employment needs.

Policy BA3: Ashleigh Park, Bampton

Land with a gross site area of 0.3 (ha) at Ashleigh Park, Bampton is proposed for 7 residential dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Upper farmed and wooded valley slopes' landscape character area. The majority of this type of landscape drains into the Exe Valley and is characterised by lush and fertile land giving rise to extensive tracts of medium scale fields of permanent pasture however the site is located within the fold of the hill and development here would have minimal impact, a neutral effect. The site is close to Kersdown Quarry SSSI but is not adjoining therefore no impact on the geodiversity of this site is considered.	0		0
B) Protection and promotion of a quality built and historic environment	The development site is not within or near the Bampton Conservation Area and development is unlikely to impact upon any listed buildings, a neutral effect.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Bampton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development and arrangements for future maintenance, overall a neutral effect. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
D) Safeguarding and minimising resource use	The site is located in the Minerals Consultation Zone for Kersdown Quarry. The site is on Grade 3 and 4 agricultural land (good/moderate to poor quality agricultural land). Given the small scale of the site but the fact that the site is located in a Minerals Consultation Zone and is on Grade 3 and 4 agricultural land an overall negative effect is considered.	-2	This site has planning permission and therefore the Minerals Consultation Zone has been considered as part of the planning application process. A slight negative effect remains as the site is on Grade 3 and 4 agricultural land.	-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 7 new dwellings with 30% affordable housing a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Bampton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	An adequate site access is achievable, a neutral effect. The Mid Devon Community Infrastructure Evidence Report indicates that there is sufficient capacity in the local schools. As access is achievable and the provision of education is possible a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impact of the development of this site has the potential to impact upon traffic congestion. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the

	local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bampton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meeting housing needs.

South Molton Road, Bampton
Option

Land with a gross site area of 4 (ha) at South Molton Road, Bampton is proposed for 80 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are a number of important trees within the site, of which 17 are covered by TPOs (all of these are within the eastern field), a negative effect. The site falls within the 'River valley slopes and coombes' landscape character area, which are defined as having steeped, often wooded sides. In the upper valleys, such sites have a strong sense of enclosure. This site would be highly visible from the ridge to the south west and the ridge to the north west due to the steep sloping nature of the site. Development within this site would also be visible from South Molton Road. Overall a negative effect is considered given the impact on trees and the landscape.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment. However given the high number of TPOs on the site, the potential for a TPO to be affected still remains, a slight negative but uncertain effect is considered as the impact will depend on the layout of any development.	-1/?
B) Protection and promotion of a quality built and historic	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment				
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Bampton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Site is located on Grade 3 good / moderate quality agricultural land; given the relatively small area of the site a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 80 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Bampton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. Footway provision and widening will be required, overall a slight negative effect.	-1	The provision of footway and widening would result in a neutral effect.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
I) Delivering the necessary infrastructure	Accesses from the B3227 and High Street/C796 are achievable, but the site is steep which would limit suitable access points and highway layout, a slight negative effect. Bampton Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Tiverton High School however does have capacity to meet the requirements of this individual allocation. Given a road access is achievable but steep and the education requirement, an overall negative effect is considered.	-2	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. Footpath provision and widening to allow easy access to the village centre would benefit access to and from the site, however as the topography of the site is difficult to mitigate this will limits suitable access points and highway layout. Overall a slight negative and uncertain effect is considered given the topography of the site is difficult to mitigate and the uncertainty over education provision.	-1/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the

	local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bampton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land at Ball Hill, Bampton

Option

Land with a gross site area of 0.5 (ha) at Land at Ball Hill, Bampton is proposed for 16 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is not classed as a landscape character area, falling with the 'main cities and towns' area. The site in part is largely shielded by its high hedges and trees. The southern part lies on the western slope of the Batherm Valley and would be open to some views from the south, with landscape impacts expected as a result. Overall a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation, a neutral effect is therefore considered.	0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Bampton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Site is located on Grade 4 poor quality agricultural land; given the small scale of the site a neutral effect is considered.	0		0
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 16 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Bampton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The site is adjacent to sewerage works and there will be concerns of the impact of odours on residential amenity. Overall a slight negative effect.	-1	Given the proximity of the site to the sewerage works there are limited mitigation measures to respond to the impact of odours on residential amenity, a slight negative effect remains.	-1
I) Delivering the necessary infrastructure	West Street is of limited width but would be subject to improvement should the site south of Bampton School be developed. The site access is achievable off the existing highway. There is existing capacity in the local schools to accommodate development from this individual site. Overall a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bampton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Bourchier Close, Bampton

Option

Land with a gross site area of 2.4 (ha) at Bourchier Close, Bampton is proposed for 40 dwellings & 4,000 sqm floor space.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are no environmental designations within or adjacent the site, although the area is defined by Devon Biodiversity Record Centre as being of wildlife interest as a result of the site being comprised of 'semi-improved natural grassland/unimproved marshy grassland'. The site falls within the 'Upper farmed and wooded valley slopes' landscape character area, characterised by lush and fertile land giving rise to extensive tracts of medium scale fields of permanent pasture. The element of the site adjoining the road would have a lesser impact than the western site, which is much more steeply sloping. The Inspector's Report in 2010 noted that the development of the whole site would cause visual impact into the countryside outside the existing settlement although this would be contained by topography and potential screen planting, and concluded that allocating the site was justified. As the site is relatively small but could have an impact on biodiversity, and potentially the landscape without mitigation an overall negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment a neutral effect is considered. Further mitigation would be provided if development was contained within the western site.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Bampton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land. 1.1ha (73% eastern part) of the site is located on Grade 3 good / moderate quality agricultural land, 0.4ha (27% western part) is located on Grade 4, poor quality agricultural land, overall a slight negative effect is considered as the site is relatively small but includes some Grade 3 agricultural land.	-1		-1
E) Promoting economic growth and employment	Option provides 4,000 sqm of commercial floorspace helping to diversify the economy and encourage inward investment, a positive effect.	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting	Option provides for 40 new dwellings a contribution towards future housing	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
housing needs	need, a positive effect.			
H) Ensuring community health and wellbeing	Bampton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The existing pedestrian access to the town centre is poor, with no continuous pedestrian footpath along either the B3190 or Frog Street. Frog Street is relatively lightly trafficked and provides a direct route to the town centre from the site and is therefore the preferred pedestrian route. Frog Street is narrow with many dwellings directly fronting the highway. The upper part of the street is bounded by mature hedging which would not be desirable to lose. These factors make the widening of Frog Street difficult. The allocation of commercial land within Bampton could decrease air quality within the settlement through increased traffic movement and in particular HGV movements. Given the potential safety issues with pedestrian movement along Frog Street and potential harm to air quality a negative effect is considered.	-2	Development should include measures that discourage additional vehicular use of Frog Street whist at the same time making the highway safer for use. Improvements to cycling and pedestrian safety to the town centre along Frog Street should also be required. DM4 Pollution also provides some mitigation. Given the mitigation measures a neutral effect is considered.	0
I) Delivering the necessary infrastructure	Site will require measures to discourage additional vehicular use of Frog Street. There is existing capacity in the local schools to accommodate development from this individual site. Given the road impact on Frog Street an overall slight negative effect is considered.	-1	If transport measures are undertaken to discourage additional vehicular use of Frog Street a neutral effect can be considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bampton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing & employment needs.

Bickleigh

Land south of Glen View, Bickleigh

Option

Land with a gross site area of 1.42 (ha) at Land south of Glen View, Bickleigh is proposed for 45 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'River valley slopes and coombes' landscape character area. These areas are typified by their close proximity to the River Exe, and are largely comprised of steep, wooded valley sides, often with a strong sense of enclosure. Developing this site would change the context of the landscape, particularly when viewed from the west. However the site is surrounded by development and a main road which provides some mitigation. Overall a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation, a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	The site is within the Bickleigh Conservation Area and there are a number of listed buildings within close proximity to the site. Development on this site would be visible from Bickleigh Castle. Overall as there is potential impact on the Conservation Area, a number of listed buildings and Bickleigh Castle a negative effect is therefore considered.	-2	Where design and layout which respects the character and setting of the Conservation Area, relevant listed buildings and Bickleigh Castle a neutral effect is considered.	0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. There are also unnamed watercourses flowing through the north and south of the site, the impact of which is not yet known. Bickleigh has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and potential flood risk but the benefit of a bus service on balance a slight negative and uncertain effect is considered.	-1/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A Flood Risk Assessment would be required to determine the impact of the	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			unnamed watercourses. If development avoided areas of flood risk this would mitigate any impact. Given the mitigation of surface water run off and flood risk a slight positive effect is considered as there is the benefit of a bus service. Uncertainty remains as the impact of the unnamed watercourse is not yet known.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. 1.35 ha (96% East) is located on Grade 3 good / moderate quality agricultural land and 0.05ha (4% West) is located on Grade 4 poor quality agricultural land. Given the size of the site area, a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 45 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Bickleigh does not meet the criteria checklist to be designated a village in the Local Plan which is based on the physical characteristics of the settlement and the availability of three essential services (educational facility, convenience store and transport service). There is a bus stop in Bickleigh, which is walkable, but quite far with an hourly or greater bus service on the A396. It therefore scores a slight negative impact.	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
I) Delivering the necessary infrastructure	With careful location an adequate site access from the A396 is achievable. Access is only feasible from the East lane, and access would result in the loss of part of the hedgerows. The C103 is narrow and has restrictive alignments. Bickleigh Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Tiverton High School however does have capacity to meet the requirements of this individual allocation. Overall a negative effect is considered given access difficulties and school capacity.	-2	If the development provided access from the East lane, access would be achievable. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. Overall a neutral and uncertain effect is considered given the potential for access and school capacity to be provided for but the uncertainty around expanding the school within its existing site.	0/?

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bampton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Bow

Policy BO1: Land adjacent to Hollywell, Bow

Land with a gross site area of 1.2(ha) at Land adjacent Hollywell, Bow is proposed for 20 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape that is intensively farmed. The site is flat and the boundary hedges provide a significant amount of screening. Despite the gently rolling nature of the farmland to the southern side of the village, there are only limited opportunities for views into the site from the west, east and south due to the screening effect of the existing boundary. However as there may be some loss of hedges and if lost this would impact on the landscape, but the site is relatively small a slight negative effect is considered	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	This site lies in an area of archaeological potential, with prehistoric settlement and funerary activity recorded in the vicinity, a slight negative and uncertain effect is considered.	-1/?	The policy requires archaeological investigation and appropriate mitigation, overall a neutral effect is considered although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Bow has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development and arrangements for future maintenance. Given the mitigation	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 very good quality agricultural land, as the site is relatively small a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 20 new dwellings with 30% affordable housing a contribution towards future housing need. Option would require the demolition of one house in the south west corner to make an access onto Station Road. Given the overall net gain of 19 new dwellings a slight positive effect is considered.	+1		+1
H) Ensuring community health and wellbeing	Bow is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect	0		0
I) Delivering the necessary infrastructure	The Mid Devon Community Infrastructure Evidence Report indicates that primary and secondary school pupils can be accommodated without expansion. Access is possible but would require the demolition of the 'Hollywell' building. Given access will be required through a building a slight negative effect is considered.	-1	The allocation allows for 20 new dwellings and requires site access to come off Station Road via north west corner through the 'Hollywell'	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			building a neutral effect is therefore considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bow. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will meet housing needs.

Policy BO2: West of Godfrey Gardens, Bow

Land with a gross site area of 0.23 (ha) West of Godfrey Gardens, Bow is allocated for 6 affordable dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is within the 'Lower rolling farmed and settled valley slopes' character area, which is characterised by being a gently rolling and strongly undulating landscape which is intensively farmed. The site is largely shielded from views from the south due to existing hedgerows. The steep topography to the north also reduces views from that direction. There is medium housing to the East, and low density housing located to the West of the site. However as there may be some loss of hedges and if lost this would impact on the landscape, but the site is relatively small a slight negative effect is considered	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of	This site lies in an area of archaeological potential, with prehistoric settlement and funerary activity recorded in the vicinity, an overall slight negative and uncertain effect is considered.	-1/?	The policy requires archaeological investigations and appropriate mitigation measures, overall a	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
a quality built and historic environment			neutral effect is considered although this remains uncertain as the impact will depend on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Bow has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	0
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural, a slight negative effect as the site is relatively small.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 6 new affordable dwellings a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community	Bow is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited	0	The policy requires the provision of	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	level of development, a neutral effect		a pedestrian route linking Godfrey Gardens with Bow Mill Lane, overall a slight positive effect.	
I) Delivering the necessary infrastructure	The site is presently accessed from Bow Mill Lane which is a quite narrow, one vehicle width lane. Access from Godfrey Gardens only as Bow Mill Lane has restrictive alignment and width. The Mid Devon Community Infrastructure Evidence Report indicates that primary and secondary school pupils can be accommodated without expansion. Given access difficulties if development was to be access through Bow Mill Lane a slight negative effect is considered.	-1	The policy requires access from Godfrey Gardens, overall a neutral effect.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bow. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs

Land adjacent Bow Mill Lane, Bow

Option

Land with a gross site area of 2.17 (ha) at Land adjacent Bow Mill Lane, Bow is proposed for 52 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural	There is a tree preservation order on one tree in the northern part, and another along the eastern boundary. The site is within the 'Lower rolling	-2	Policy S9 'Environment' and DM1	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment	farmed and settled valley slopes' landscape character area, which is characterised by being a gently rolling and strongly undulating landscape which is intensively farmed. The south end of the site is largely shielded from views further to the south, west and north with high boundary hedging. The northern part of the site slopes steeply and would be more prominent in the landscape. Housing on this part would be visible from the south, north and west. The adjacent housing to the east would provide some level of mitigation. Although there is a backdrop of development as the north of the site slopes steeply there could be some landscape impact, there could also be an impact on important trees therefore a negative effect overall is considered.		'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment a neutral effect is considered. Further mitigation would be provided if development was focussed on the southern part of the site avoiding the northern more prominent location.	
B) Protection and promotion of a quality built and historic environment	This site occupies a large area in a landscape where prehistoric settlement and funerary activity is recorded in the vicinity. There may also be an impact of the development upon the setting of the Scheduled Monuments to the west. Given the potential of archaeological impact and potential impact on the setting of the Scheduled Monuments, an overall negative and uncertain effect is considered.	-2/?	If archaeological investigation and mitigation is provided for, and design and layout which respects the character and setting of the Scheduled Monuments is considered a neutral effect is viewed. Although an uncertain effect remains as the impact on the prehistoric settlement and funerary activity will depend on the results of the investigation	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Bow has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural. Given the relatively small scale of the development a slight negative effect is considered	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 52 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Bow is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The site is presently accessed from Bow Mill Lane which is a quite narrow, one vehicle width lane. Access from Godfrey Gardens only as Mill Lane has restrictive alignment and width, a slight negative effect. There is existing capacity in the local schools to accommodate development from this individual site. Given access difficulties through a restrictive alignment and road width a slight negative effect is considered.	-1	If development provides access from Godfrey Gardens a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bow. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet the housing needs of Bow.

East Langford Farm, Bow
Option

Land with a gross site area of 1.3 (ha) at East Langford Farm, Bow is proposed for 25 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is classified as 'Lower rolling farmed and settled valley slopes', which is characterised by being a gently rolling and strongly undulating landscape which is intensively farmed. The site may be viewed from the South however the existing development provides some mitigation, given the mitigation of the existing development and the relatively small scale of the site overall a neutral effect is considered.	0		0
B) Protection and promotion of a quality built and historic environment	This site occupies an area in a landscape where prehistoric settlement and funerary activity is recorded in the vicinity. The development would also be an illogical and unusual extension to the built environment. Overall a negative and uncertain effect.	-2/?	If archaeological investigation and mitigation is provided for this would improve the impact score although this remain uncertain as the impact will depend on the results of the investigation. A slight negative remains as the	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			development of this site would be an illogical and unusual extension to the built environment.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Bow has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 very good quality agricultural. Given the relatively small site area a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 25 new dwellings a contribution towards future housing need. Option would require the demolition of two homes to make an access onto Tree Park however an overall net gain of 23 new dwellings would be provided, therefore a positive effect is considered.	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
H) Ensuring community health and wellbeing	Bow is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Highways Authority visited Iter Close and has concluded that the site could be accessed from there for a small number of dwellings however it would be dependent on land in the control of both number 1 and 2 in the south west corner. This solution would only serve a small increase of up to 25 dwellings. Existing estate has issues with parking particularly on the bend to the north of the play area which causes a restriction, therefore a suitable level of parking need to be imposed. Option would require the demolition of two homes to make an access onto Tree Park. There is existing capacity in the local schools to accommodate development from this individual site. Given access and parking difficulties a slight negative effect is considered.	-1	If the development provided access from Iter Cross and access onto Tree Park, and provided appropriate parking a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bow. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land adjacent Jackman Car Park, Bow
Option

Land with a gross site area of 1 (ha) at Land adjacent Jackman Car Park, Bow is proposed for 32 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The site is open in nature, and slopes steeply down the hillside towards the north. The southern part of the site forms part of the ridge on which the main road through the village lies. There are wide views from the site out towards the wide ridge to the north. The site would also be visible from the ridge, however some level of mitigation would be provided by the existing built development line which spans along this side of the road. Given the small size of the site a neutral effect is considered.	0		0
B) Protection and promotion of a quality built and historic environment	0.3ha of site is within the Conservation Area of Bow (30%, the southern part of site). There are many listed buildings within the centre of Bow, a number of which are located in close proximity to the site, particularly on the south side of the main street further west along the road. The proposed development lies within an area of archaeological potential, in an area enclosed in the medieval period and in an area where prehistoric activity has been recorded. The site is also steeply sloping, falling sharply to the north. Development of this site would extend the built environment on the north side of the main road which is currently arranged in a linear fashion hugging the line of A3072. Given the potential impact on the Conservation Area, listed buildings, area of archaeological potential and extension of the built environment on the north side of the main road an overall significant negative and uncertain effect is considered.	-3/?	If the following aspects are considered by development this would provide some mitigation. • Design and layout which respects the character and setting of Conservation Area and listed buildings. • Archaeological investigation and appropriate mitigation measures. Although an uncertain effect remains as the impact on the area of archaeological potential will	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			depend on the results of the investigation. A slight negative impact is considered as the development would extend the built environment on the north side of the main which is generally arranged in a linear fashion hugging the line of the A3072.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Bow has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run-off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land, given the relatively small size of the site, only a slight negative effect is considered.	-1		-1
E) Promoting economic	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
growth and employment				
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 32 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Bow is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	High level differentials between the main road and the site may restrict access, which may need to cross the existing car park. There is a requirement for a frontage footway. There is existing capacity in the local schools to accommodate development from this individual site. Given access difficulties a slight negative effect is considered.	-1	If access is required through the existing car park, the provision of replacement car parking would ensure no net loss of infrastructure and therefore a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bow. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

South of Iter Cross, Bow (Commercial) Option

Land with a gross site area of 0.5 (ha) at South of Iter, Bow is proposed for 1,700 sqm commercial floor space.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is currently part of an open agricultural field which is highly visible from the south, although adjacent development will mitigate some impact. This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. Overall a slight negative effect is considered given the potential impact on the landscape from the south but mitigation is provided by existing development and the site is relatively small.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation, a neutral effect is therefore considered.	0
B) Protection and promotion of a quality built and historic environment	The site contains evidence of prehistoric activity and within a landscape that contains a concentration of prehistoric sites identified by aerial photography, overall slight negative and uncertain effect.	-1/?	If archaeological investigation and mitigation is provided for a neutral effect is viewed, although this remains uncertain as the impact will depend on the results of the investigation	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Bow has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 Excellent quality agricultural land. Given the relatively small scale of the site a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	Option provides 1,700 sqm of commercial floorspace helping to diversify the economy, provide opportunities for local employees, reduce out-commuting and encourage inward investment, a positive effect	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	Bow is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The allocation of commercial land within Bow could decrease air quality within the settlement through increased traffic movement and in particular HGV movements. Given the potential for harm to air quality an overall slight negative effect is considered.	-1	DM4 Pollution will provide mitigation, a neutral effect overall.	0
I) Delivering the necessary infrastructure	The site is already allocated and there are no known issues with infrastructure.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic congestion.
Temporary/permanent effects: Timescale: Short (1-5 years),	Within the short term, construction traffic associated with the development will

Medium (6-15 years) Long (15+ years)	increase traffic within Bow. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet employment needs.

South West of Junction Road, Bow (Commercial) Option

Land with a gross site area of 0.6 (ha) at South west of Junction Road, Bow is proposed for 2,100 sqm commercial floor space.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site would be highly visible from the south, although adjacent development will mitigate some impact. This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. Given the site is relatively small but there may be some landscape impact from the south overall a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation, a neutral effect is therefore considered.	0
B) Protection and promotion of a quality built and historic environment	The site lies near evidence of prehistoric activity and within a landscape that contains a concentration of prehistoric sites identified by aerial photography, overall a slight negative and uncertain effect.	-1/?	If archaeological investigation and mitigation is provided for a neutral effect is viewed, although this remains uncertain as the impact will depend on the results of the investigation	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Bow has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 excellent quality agricultural land. Given the relatively small size of the site a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	Option provides 2,100 sqm of commercial floorspace helping to diversify the economy, provide opportunities for local employees, reduce out-commuting and encourage inward investment, a positive effect	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	Bow is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The allocation of commercial land within Bow could decrease air quality within the settlement through increased traffic movement and in particular HGV movements. Given the potential for harm to air quality an overall slight negative effect is considered.	-1	DM4 Pollution will provide mitigation, a neutral effect overall.	0
I) Delivering the necessary infrastructure	There is a potential access through the employment site directly to the north, otherwise access would be difficult, a slight negative effect.	-1	If access was provided to the north a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic congestion.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bow. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet employment needs.

Bradninch

Policy BR1: Hele Road, Bradninch

Land with a gross site area of 0.3 (ha) at Hele Road, Bradninch is proposed for 7 dwellings with 30% affordable.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. These areas are typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The site is an open field, and slopes from the north west to the south east. The site can be viewed from some distance, particularly from the ridge line to the south east effect. However, the existing adjoining housing already provides a backdrop of built development and would provide a level of mitigation should the site be used for housing. As there could be a slight negative impact on landscape as it can be viewed from some distance from the ridge line to the south east a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation a neutral effect is therefore considered.	0
B) Protection and promotion of a quality built and historic environment	The site lies in an area of archaeological potential demonstrated by the presence of prehistoric sites identified through aerial photography, an overall slight negative and uncertain effect is considered.	-1/?	The policy requires archaeological investigations and appropriate mitigation measures, overall a neutral effect although this remains uncertain as the impact will depend on the results of the	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Bradninch has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	0
D) Safeguarding and minimising resource use	Development option is located on greenfield land, Grade 3 good / moderate quality agricultural land, a slight negative effect given the small scale of the site.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 7 new dwellings with 30% affordable, a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Bradninch is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
I) Delivering the necessary infrastructure	An adequate access is achievable to the north of the site. The Mid Devon Community Infrastructure Evidence Report indicates that pupils can be accommodated without expansion. Overall a neutral effect is considered.	0	The policy requires the access point to be located on the northern part of the site frontage on to Hele Road, overall a neutral effect.	0

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Bradninch. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Burlescombe

Churchyard Field, Burlescombe

Option

Land with a gross site area of 0.6 (ha) at Churchyard Filed, Burlescombe is proposed for 10 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. To the west the land drops away and offers wide views, which reciprocally when viewed into the site would be seen with the church in the background, a slight negative effect.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation, a neutral effect is therefore considered.	0
B) Protection	The site lies in an area of archaeological potential in proximity to the parish	-2/?	If the following aspects are	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
and promotion of a quality built and historic environment	church, which is likely to have been the focus of the early settlement at Burlescombe. The site is located in close proximity to the listed church (to the east), and development of the site may negatively impact upon the setting of the building whilst also reducing the openness of the village centre. Given the potential of archaeological disturbance and impact on the setting of the listed church, an overall negative and uncertain effect is considered.		considered by development a neutral effect is considered. • Design and layout which respects the character and setting of Conservation Area and listed buildings. • Archaeological investigation and appropriate mitigation measures. Although an uncertain effect remains as the impact on the area of archaeological potential will depend on the results of the investigation	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Burlescombe has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and potential flood risk but the benefit of a bus service on balance a slight negative effect is considered.	-1	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			Given the mitigation of surface water run off and flood risk a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. There is contaminated land to the east of the church. The site is located on Grade 3 good / moderate quality agricultural land. A negative effect is considered given the presence of contaminated land and Grade 3 agricultural land.	-2	Site contamination assessment and remediation should be undertaken where required. However as the site is still on Grade 3 agricultural land a slight negative effect is still considered.	-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 10 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Burlescombe does not meet the criteria checklist to be designated a village in the Local Plan which is based on the physical characteristics of the settlement and the availability of three essential services (educational facility, convenience store and transport service). Burlescombe is remote from services/facilities and has a less than daily bus service, therefore a slight negative effect is considered.	-1		-1
I) Delivering	There is poor access to the site, with a telephone wire crossing from the	-1	If access is re-graded a neutral	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
the necessary infrastructure	east to west in the northern part of the site and a public right of way on the site as well, which may constrain development. An adequate access is achievable however the access would need to be re-graded. There is existing capacity in the local schools to accommodate development from this individual site. Overall a slight negative effect is considered.		effect is considered.	

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Burlescombe. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Butterleigh

North West of Homefield, Butterleigh

Option

Land with a gross site area of 0.7 (ha) at North West of Homefield, Butterleigh is proposed for 10 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This sites falls within the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium-scale fields of permanent pasture. There would be an	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation, a neutral effect is considered.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	impact on the landscape character if the site was developed, as views of the site from the south and west are far reaching. There would also be little mitigation provided by the existing built development, as there are only a small number of dwellings at this part of the village. A slight negative effect is considered.			
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Butterleigh does not have access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the lack of a bus service overall a negative effect is considered.	-2	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 very good quality agricultural land. Given the relatively small size of the site a negative effect is considered.	-2		-2
E) Promoting economic growth and	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
employment				
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 10 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Butterleigh does not meet the criteria checklist to be designated a village in the draft Local Plan which is based on the physical characteristics of the settlement and the availability of three essential services (educational facility, convenience store and transport service). Butterleigh is remote from services/facilities and there is no bus service provided, a slight negative effect.	-1		-1
I) Delivering the necessary infrastructure	The local highway network consists of narrow roads having restrictive alignments although an adequate access is achievable from the C31 to the east of the site. The unclassified road to the west is unsuitable for access to the site. No immediate local school, development will increase the home to school transport costs as no schools are within a safe walking distance. Given site access difficulties and issues around home to school transport costs a negative effect is considered.	-2	If access is provided from the C31 to the east of the site this would help minimise the impact of delivering the necessary infrastructure. However due to the lack of school a slight negative effect is still considered.	-1

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Butterleigh. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Chawleigh

Policy CH1: Barton, Chawleigh

Land with a gross site area of 1.25 (ha) at Barton, Chawleigh is proposed for 20 dwellings with 30% affordable.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Upper farmed and wooded valley slopes' landscape character area. This area is typified by a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium-scale fields of permanent pasture. The original site area of 4.9ha would encroach into the open countryside and would create some loss of views from the northern part of the village that spreads as far as Chawleigh Barton Wood to the north, overall a negative impact. Restricting development to the south western portion of the site would limit any impact.	-2	The site has been reduced in size from 4.9ha to 1.25ha and limits development to the south western portion of the site which limits any impact, a neutral effect.	0
B) Protection and promotion of a quality built and historic environment	The proposed development site lies in an area of archaeological potential with findspots of prehistoric tools and settlement site located in the wider landscape. The HER also records the presence of a prehistoric burial mound somewhere within the proposed development site. The original site area was larger and abutted the Conservation Area and tree lined avenue to the east. Overall this site would have scored negatively although an element of uncertainty would remain.	-2/?	The site area has been reduced and no longer abuts the Conservation Area or tree lined avenue to the east. The policy requires archaeological investigation and appropriate mitigation measures, overall a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The original site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site has been reduced in size and remains within flood zone 1. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Chawleigh has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but	0	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development and arrangements for future	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	the benefit of a bus service on balance a neutral effect is considered.		maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land, Grade 3 good / moderate agricultural land. Given the relatively small scale of development on this site a slight negative impact is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 20 new dwellings with 30% affordable housing, a contribution towards future housing need, overall a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Chawleigh is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect	0		0
I) Delivering the necessary infrastructure	The original site area of 4.9ha would have required access to be taken from the unclassified road at the south east corner of the site. The Mid Devon Community Infrastructure Evidence Report indicates that primary and secondary school pupils can be accommodated without expansion. Overall a slight negative effect and uncertain effect is considered given the limitations of the unclassified road.	-1/?	A smaller site area of 1.25 ha is now considered to accommodate 20 dwellings. The policy requires access to be achieved of School Close. The lower development level proposed reduces issues around	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			road capacity and therefore a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Chawleigh. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Tower Meadow, Chawleigh
Option

Land with a gross site area of 0.4 (ha) at North West of Tower Meadow, Chawleigh is proposed for 16 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Upper farmed and wooded valley slopes' landscape character area. This character area is typified by its steeply rolling landform and lush and fertile land which gives rise to extensive tracts of medium-scale fields. Developing this site would not have a significant impact upon the character of the surrounding landscape as it is enclosed by development, a neutral effect.	0		0
B) Protection and promotion of	The site is located within the Chawleigh Conservation Area where a number of listed buildings lie immediately to the east, including the Church of St James (Grade I). The proposed development lies within an apparent	-3/?	The following aspects could provide some mitigation:	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
a quality built and historic environment	enclosed area centred on the church of St James and similar types of enclosed areas elsewhere in the county have been interpreted as the early settlement boundary and, as such, may date to the Saxon or earlier period. Appeal decisions on the site have been dismissed due to serious harm on the character and appearance of the Conservation Area. Given the potential impact on an area of archaeological potential, the potential impact on the Chawleigh Conservation area and Grade I listed building an overall significant negative and uncertain effect is considered.		• Design and layout which respects the character and setting of Conservation Area and listed buildings. • Archaeological investigation and appropriate mitigation measures. An uncertain effect remains as the impact on the area of archaeological potential will depend on the results of the investigation. A negative effect is still considered given the appeal decisions on the site which set out concerns over serious harm on the character and appearance of the Conservation Area.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Chawleigh has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land used for growing Christmas Trees. The site is located on Grade 3 good / moderate agricultural land, a slight negative effect as the site is relatively small.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 16 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Chawleigh is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Access to the site would need to be taken from the unclassified road at the east of the site and is considered achievable. There is capacity in the local schools to accommodate this level of development in Chawleigh, a neutral effect overall.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.

Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Chawleigh. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Cheriton Bishop

Policy CB1: Land off Church Lane, Cheriton Bishop

Land with a gross site area of 1.9 (ha) at Land off Church Lane, Cheriton Bishop is proposed for 30 dwellings with 30% affordable housing. For reference, this site was known as 'Land north of Brakes View' in the 2013 SHLAA Report.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The land gently undulates, dropping away further to the east. This area is typified by its strong cultural association with Dartmoor National Park, forming part of the setting of the moor and is very important to its value and appreciation. Landscape impacts are likely to be low as there is existing housing along the southern and western boundaries and the site is relatively small. Given the relatively small size of the site and backdrop of development which provides mitigation, but the proximity to Dartmoor National Park a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for any potential impact on Dartmoor National Park, overall a neutral effect.	0
B) Protection and promotion of a quality built and historic environment	This site has the benefit of linking two parts of the village together, a slight positive effect.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	The site has been considerably reduced in size. There is a small watercourse along the southern boundary of the site. The site is located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures. Cheriton Bishop has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered. This remains uncertain as the impact of the small watercourse is unknown.	-1/?	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from development and arrangements for future maintenance. The supporting text also makes note of the watercourse along the boundary of the site and states that a flood risk assessment will need to consider the potential for flooding. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service. This remains uncertain as the impact of the small watercourse is unknown.	+1/?
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Site is located on Grade 3 good / moderate agricultural land. Given the relatively small scale a slight negative impact is considered.	-1		-1
E) Promoting economic growth and employment		0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 30 new dwellings with 30% affordable housing, a contribution towards future housing need, a positive effect.	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
H) Ensuring community health and wellbeing	Cheriton Bishop is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The development option presents the opportunity to integrate the two distinct parts of the village into a single community improving community cohesion a slight positive effect is therefore considered.	+1	The policy requires the widening of Church Lane and provision of a footpath along the site frontage which in this case will be beneficial for those in the wider community as well as the development itself. This improvement would reduce the need to walk in the road when heading towards the school from the southern part of the village. Overall a positive effect is considered.	+2
I) Delivering the necessary infrastructure	The Mid Devon Community Infrastructure Evidence Report indicates that primary and secondary school pupils can be accommodated without expansion. Access is achievable from Church Lane but will require road widening and footway construction over site frontage. Junction with C50 (main road running west-east) should be assessed for maximum capacities and yields should be determined from these or junction improvements undertaken to cater for increases. Given the potential junction capacity issues and the need for road widening and footway construction a slight negative and uncertain effect is considered.	-1/?	The policy requires the assessment of the capacity of the junction Church Lane and the main road (C50). It also requires the widening of Church Lane and provision of a footpath along the site frontage. Overall a neutral effect although some uncertainty remains as mitigation depends on the results of the assessment.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact

	upon traffic, put pressure on services and facilities and the current provision of infrastructure. The cumulative impact of development at Cheriton Bishop could also impact upon the setting of Dartmoor National Park to the south. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Bishop. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Cheriton Bishop Glebe, Cheriton Bishop Option

Land with a gross site area of 0.9 (ha) at Cheriton Bishop Glebe, Cheriton Bishop is proposed for 29 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Inland elevated undulating land' landscape character area. This area is typified by its strong cultural association with Dartmoor National Park, forming part of the setting of the moor and is very important to its value and appreciation. The proposed use of the site for housing would be a small extension to the village and therefore would have little impact on the landscape character of the area, and will not be seen in the wider context of the landscape. However given its proximity to Dartmoor National Park a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for any potential impact on Dartmoor National Park, overall a neutral effect.	0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures. A stream runs parallel to the northern boundary of the site and the impact of development on the water course may need to be tested through a flood risk assessment. Cheriton Bishop has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered. This remains uncertain as the impact of the stream is unknown.	-1/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A flood risk assessment should be undertaken for the site to determine the impact of the stream parallel to the northern boundary of the site. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service. Although this remains uncertain as the level of impact from the stream is unknown.	+1/?
D) Safeguarding and minimising resource use	Development option is located on mainly greenfield and includes some public open space. The site is located on Grade 3 good / moderate agricultural land. Given the relatively small size of the site a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 29 new dwellings a contribution towards future housing need, a positive effect.	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
H) Ensuring community health and wellbeing	Cheriton Bishop is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The proposed development of this site would result in the loss of an area of existing open space which would need to be relocated. Given the loss of open space an overall negative effect is considered.	-2	If the development safeguards or relocates the loss of open space, or demonstrates this to be a surplus of open space in the local area a neutral effect is considered.	0
I) Delivering the necessary infrastructure	There is existing capacity in the local schools to accommodate development from this individual site. An adequate access is achievable off the main through road, overall a neutral effect.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. The cumulative impact of development at Cheriton Bishop could also impact upon the setting of Dartmoor National Park to the south. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Bishop. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land near the church, Cheriton Bishop

Option

Land with a gross site area of 2.9 (ha) at Land near the church, Cheriton Bishop is proposed for 40 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Inland elevated undulating land' landscape character area. This landscape character area has a strong cultural association with the adjacent landscape of Dartmoor, and forms part of its setting. The proposed use of the site for housing will have some impact on the landscape character of the area however existing development provides some mitigation. Given the proximity of this site to Dartmoor National Park a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for any potential impact on Dartmoor National Park, overall a neutral effect.	0
B) Protection and promotion of a quality built and historic environment	Adjacent to Cheriton Bishop Conservation Area (which includes the listed church) which the site bounds on three sides. There is likely to be impact on historic built form as the properties will be close to historic buildings. The proposed development lies in an area of archaeological potential in close proximity to the Old Rectory a Grade II* listed building dating to the 14/15th century, a negative effect. Given the proximity to Conservation Area, Listed Buildings and potential for archaeological impact but mitigation available an overall negative and uncertain effect is considered.	-2/?	If the following aspects are considered by development a neutral effect is considered. • Design and layout which respects the character and the setting of the Conservation Area and listed buildings. • Archaeological investigation and appropriate mitigation measures. Although an uncertain effect remains as the impact on the area of archaeological potential will depend on the results of the investigation	0/?
C) Mitigating the effects of climate	The site is located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures. A stream runs along the north and eastern edge of site and the	-1/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
change	impact of development on the water course may need to be tested through a flood risk assessment. Cheriton Bishop has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered. This remains uncertain as the impact of the stream is unknown.		Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A flood risk assessment should be undertaken for the site to determine the impact of the stream parallel to the northern boundary of the site. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service. Although this remains uncertain given the level of impact from the stream is unknown.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. 1.8 (ha) (62% Western part) is located on Grade 3 good / moderate agricultural land and 1.1 (ha) (38% Eastern part) located on grade 4 poor quality agricultural land. Given the loss of Grades 3 & 4 agricultural land and the relatively small scale of the site, an overall slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 40 new dwellings a contribution towards future housing need, a significant positive effect.	+2		+2
H) Ensuring	Cheriton Bishop is a designated village under policy S13, it has the three	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
community health and wellbeing	essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.			
I) Delivering the necessary infrastructure	There is existing capacity in the local schools to accommodate development from this individual site. An adequate access is achievable from the north but it is uncertain if the south site could be adequately accessed via the north. To access the site there may be a need to re-profile the land to provide roadway that would require the loss of hedging to provide the necessary visibility. Visibility splays may not be in the control of the land owner and there are overhead power cables that may constrain parts of the site. Given the constraints to site access an overall slight negative and uncertain effect is considered.	-2/?	Although an access is achievable from the north it is uncertain if the south site could be adequately accessed. Significant works to re-profile the land to enable access and visibility would also be required. Other constraints such as land ownership and overhead power cables mean that that delivering the necessary infrastructure may be problematic however if achievable a neutral effect is considered although this remains uncertain.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities including education capacity and the current provision of infrastructure. The cumulative impact of development at Cheriton Bishop could also impact upon the setting of Dartmoor National Park to the south.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Bishop. Once completed the development will be permanent.

Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land adj Woodleigh Hall, Cheriton Bishop
Option

Land with a gross site area of 9.2 (ha) at Land adjacent Woodleigh Hall, Cheriton Bishop is proposed for 221 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Inland elevated undulating land' landscape character area. This landscape character area has a strong cultural association with the adjacent landscape of Dartmoor, and forms part of its setting. The proposed use of the site for housing will have some impact on the landscape character of the area however existing development such as the roads to the north and south and developed land to the east provides some mitigation. Given the proximity of this site to Dartmoor National Park, and the large number of dwellings proposed a significant negative effect is considered.	-3	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation however given the large number of dwellings proposed a slight negative effect is considered.	-1
B) Protection and promotion of a quality built and historic environment	Two listed buildings (Woodleigh Hall and Woodleigh Coach House) sit in land that is adjacent to the site in the south east. Development of this site would also extend the village in a linear fashion along the line of the former A30, overall a negative effect is considered.	-2	If development provided design and layout which respects the character and setting the listed buildings this would provide some mitigation. However the location of the site would still result in the extension of the village in a linear fashion along the line of the former A30, overall a slight negative effect.	-1
C) Mitigating	The site is located in flood zone 1 the lowest level of flood risk. The site	-1/?	A policy requirement in the Local	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
the effects of climate change	could contribute to surface water run off without appropriate mitigation measures. A stream runs along the north west boundary and the impact of development on the water course may need to be tested through a flood risk assessment. Cheriton Bishop has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered. This remains uncertain as the impact of the stream is unknown.		Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A flood risk assessment should be undertaken for the site to determine the impact of the stream parallel to the northern boundary of the site. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service. Although this remains uncertain given the level of impact from the stream is unknown.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. 7.7 (ha) (84% southern part) is located on Grade 3 good / moderate agricultural land and 1.5 (ha) (16% Northern part) located on grade 4 poor quality agricultural land, a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	Development could help boost local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be a slight positive impact.	+1		+1
F) Supporting retail	No impact.	0		0
G) Meeting housing	Option provides for 221 new dwellings a contribution towards future housing need, a significant positive effect. This level of housing provision	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
needs	could be out of scale with the settlement size of Cheriton Bishop and may need to be reduced to reflect the housing demand and need within the village.			
H) Ensuring community health and wellbeing	Cheriton Bishop is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. However given the scale of development this may impact on existing services and facilities, therefore a slight negative effect is considered.	-1		-1
I) Delivering the necessary infrastructure	Cheriton Bishop Community Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Q E Academy Trust however does have capacity to meet the requirements of this individual allocation. An adequate access is achievable but would require the loss of hedging to provide the necessary visibility and there may be a need to re-profile the land, a slight negative effect. Given the constraints to site access and educational capacity an overall negative and uncertain effect is considered.	-2/?	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. Although access is achievable, works to re-profile the land to enable access and visibility and could be problematic, however if achievable a neutral effect is considered although this remains uncertain.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact

	upon traffic, put pressure on services and facilities and the current provision of infrastructure. The cumulative impact of development at Cheriton Bishop could also impact upon the setting of Dartmoor National Park to the south. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Bishop. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land east of Hill View, Cheriton Bishop Option

Land with a gross site area of 1.3 (ha) at Land east of Hill View, Cheriton Bishop is proposed for 5 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'inland elevated undulating land' landscape character area. These areas are typified by the repeated patterns of the irregularly hedge enclosed fields and isolation of the far reaching views from higher areas. This landscape character area has a strong cultural association with the adjacent landscape of Dartmoor, and forms part of its setting. The site has wide views to the north and is in close proximity to the built environment in the village. The adjacent properties form a linear development along the main road and building on this site would be a continuation of the existing development line. Given the proximity of the site to Dartmoor National Park a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for any potential impact on Dartmoor National Park, overall a neutral effect.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Cheriton Bishop has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Site is located on Grade 3 good / moderate agricultural land, an overall slight negative effect is considered as the site considered is relatively small.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing	Option provides for 5 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
needs				
H) Ensuring community health and wellbeing	Cheriton Bishop is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	There is existing capacity in the local schools to accommodate development from this individual site. An adequate access can be formed to serve a small cul-de-sac or frontage development, overall a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. The cumulative impact of development at Cheriton Bishop could also impact upon the setting of Dartmoor National Park to the south. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Bishop. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet the housing needs of Cheriton Bishop.

Cheriton Fitzpaine

Policy CF1: Barnshill Close, Cheriton Fitzpaine

Land with a gross site area of 0.3 (ha) at Barnshill Close, Cheriton Fitzpaine is proposed for 7 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and undulating landscape which is intensively farmed. The proposed use of the site will have very limited impact on the general landscape of the area given its position, its relatively small size, and the fact that it is already surrounded effectively on three sides by development, a neutral effect.	0		0
B) Protection and promotion of a quality built and historic environment	There are a number of listed buildings and the Conservation Area within reasonable distance of the site, although it is unlikely that these would be impacted by development of this site, a neutral effect.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Cheriton Fitzpaine has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks the provision of a Sustainable Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Site is located on Grade 3 good / moderate agricultural land, a slight negative effect as the size of the site is relatively small.	-1		-1
E) Promoting economic	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
growth and employment				
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 7 new dwellings with 30% affordable housing, a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Cheriton Fitzpaine is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	An adequate access is achievable. The Mid Devon Community Infrastructure Evidence Report indicates that primary and secondary school pupils can be accommodated without expansion. Given the site access is achievable and spare capacity of the school to support low levels of development an overall neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Fitzpaine. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs

Policy CF2: Land adjacent school, Cheriton Fitzpaine
Option

Land with a gross site area of 1.1 (ha) at Land adjacent the primary school, Cheriton Fitzpaine is proposed for 22 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. It is typified by a gently rolling and strongly undulating landscape which is intensively farmed. The adjacent school and housing at White Cross will mitigate some of the visual impact, a slight negative effect.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation therefore a neutral is considered.	0
B) Protection and promotion of a quality built and historic environment	Development of this site would establish a link between the main part of the village and the nearby housing at White Cross, overall a slight positive effect.	+1		+1
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Cheriton Fitzpaine has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks the provision of a Sustainable Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and	Development option is located on greenfield land. Site is located on Grade 3 good / moderate agricultural land, a slight negative effect, given the relatively small size of the site.	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
minimising resource use				
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 22 new dwellings with 30% affordable housing, a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Cheriton Fitzpaine is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. Development of this site could improve community cohesion through linking the main part of the village with White Cross and would ensure short walking distances to the school overall a slight positive effect.	+1		+1
I) Delivering the necessary infrastructure	An adequate access is achievable. The Mid Devon Community Infrastructure Evidence Report indicates that primary and secondary school pupils can be accommodated without expansion. Overall a neutral effect given the scale of the development. Given the site access is achievable and spare capacity of the school to support low levels of development an overall neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years),	Within the short term, construction traffic associated with the development will

Medium (6-15 years) Long (15+ years)	increase traffic within Cheriton Fitzpaine. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Cheriton Fitzpaine Glebe, Cheriton Fitzpaine

Option

Land with a gross site area of 2.2 (ha) at Cheriton Fitzpaine, Cheriton Fitzpaine is proposed for 40 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	A large protected tree forms a distinctive feature within the field area, on its upper slopes. The landscape character of the area forms part of a predominantly gently rolling and strong undulating landscape in this area. The proposed development will have a major impact on the quality of the landscape in this area and which will also lead to the growth of the village on the upward valley slopes on this side. Existing development provides some mitigation however given the impact on the landscape and the potential loss or damage to the protected tree a negative effect overall is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	The site is close to some listed buildings a slight negative effect.	-1	Design and layout which respects the character and setting of the listed buildings would provide mitigation and therefore a neutral effect is considered.	0
C) Mitigating the effects of climate change	A river runs along northern boundary of the site. 1.9ha (87% South) of the site lies within Flood zone 1 and 0.3ha (13% North) lies within Flood zone 2 and 3. The site could contribute to surface water run off without appropriate mitigation measures. Cheriton Fitzpaine has access to a bus service which	-1	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered.		Schemes to deal with surface water run-off and arrangements for future maintenance. If development avoided areas in flood zone 2 and 3 a neutral effect is considered. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Loss of 0.4 (ha) (18% south) Grade 2 very good quality agricultural land and 1.8 (ha) (82% north) Grade 3 agricultural land. A negative effect is considered as some of the site is Grade 2 agricultural land.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 40 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Cheriton Fitzpaine is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. Following consultation this site is proposed as a Local Green Space by the community, for this reason a negative impact is	-2		-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	considered.			
I) Delivering the necessary infrastructure	The local highway network of narrow roads have restrictive alignments, an adequate access is achievable as the site is accessible from the road, though some of the hedge would need to be removed for visibility. There is existing capacity in the local schools to accommodate development from this individual site. Overall a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Fitzpaine. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Landboat Farm, Cheriton Fitzpaine
Option

Land with a gross site area of 1.91 (ha) at Landboat Farm, Cheriton Fitzpaine is proposed for 55 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are several mature trees, mainly horse chestnuts, within the site. The site is classed as being within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is defined as being predominantly	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	open, rolling countryside (and further characterised by a tightly rolling, medium to small scale landform). The proposed use of the site will impact on the general landscape of the area given its position; part of the site affords open views eastwards towards the Raddon Hills and rolling, open countryside, while the rest of site would not impact the landscape due to the close proximity to the settlement and existing uses. Given the potential impact on the mature trees and the impact on the landscape over part of the site overall a negative effect is considered.		the impact on the landscape and the natural environment a neutral effect is considered.	
B) Protection and promotion of a quality built and historic environment	There are no listed buildings although there are some undesignated older (C19) farm buildings sited within the site and which may be worthy of retention as local heritage assets, although it is likely that these buildings do not have significant historical or architectural value. They are typical of the local vernacular but do not presently form an integral part of the local building fabric, having been mainly obscured over the years by various agricultural additions. Overall a neutral effect is therefore considered.	0		0
C) Mitigating the effects of climate change	A stream runs along the southern part of the site. The southwest of the site is within flood zone 2 and 3 (17%) with the remaining (83%) in flood zone 1. The site could contribute to surface water run off without appropriate mitigation measures. Overall a negative effect is considered. Cheriton Fitzpane has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service, on balance a slight negative effect is considered. This remains uncertain as the impact of the stream is unknown.	-1/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. If development avoided areas in flood zone 2 and 3 and a flood risk assessment is undertaken to determine the impact of the stream that runs through the centre of the southern part of the site a neutral effect is considered. Given the mitigation of flood risk a	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			slight positive effect is considered as there is the benefit of a bus service. This remains uncertain as the impact of the stream is unknown.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Site is located on Grade 3 good / moderate agricultural land with some of the site forming agricultural buildings. Given the relatively small size of the site a slight negative impact is considered.	-1		-1
E) Promoting economic growth and employment	In the south western part of the site, there is a group of buildings which are modern, open agricultural storage buildings and other storage facilities. Also contained within the site are a group of three traditional stone barns which link together to form a central yard. Development of the site would result in the loss of some employment uses, a slight negative effect.	-2	Retention of the existing buildings which provide employment uses or the provision of equivalent employment land within the site would result in a neutral effect overall.	0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 55 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Cheriton Fitzpaine is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect. Some of the land (the strip to the south of Cherry Meadow) already forms some form of informal recreational use with at least one resident having an opening from private gardens onto this land. Under previous planning policy this piece of land was designated as 'Important land for sport and recreation'. Given the provision	-1	Retention of the land used for informal recreation would result in a neutral effect overall.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	of services and facilities but potential loss of some important although undesignated recreational land, a slight negative effect is considered.			
I) Delivering the necessary infrastructure	Access into the site is via a farm track, formed within the past 10 years located approx. mid way along its northern boundary and with a large visibility splay with the Class lll road, and has new Devon banks either side; this access has replaced the original farm access road along the western edge, which has been partially blocked at its egress onto the Class lll road to only now allow for direct pedestrian access on this side. The local highway network of narrow roads has restrictive alignments and the existing access has inadequate visibility however an adequate access is considered achievable. There is existing capacity in the local schools to accommodate development from this individual site. Given the potential works required to deliver access but it is achievable a slight negative effect is considered.	-1	Improvement of the site access would improve visibility and is therefore achievable, overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Fitzpaine. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Poole Barton, Cheriton Fitzpaine
Option

Land with a gross site area of 1.2 (ha) at Poole Barton, Cheriton Fitzpaine is proposed for 21 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. Part of the site is already developed, however many of these buildings are historic and agricultural in nature and play a role as part of the local landscape. Landscape character could be affected by insensitive development in this location, a slight negative effect.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation, a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	A number of the buildings within the site fall within the Cheriton Fitzpaine Conservation Area. Poole Barton, lying immediately on the east side of the SW-NE lane is a grade II* listed building and dates from the 15th/16th century. The grade I, Church of St Matthew, sits to the immediate north east of the site. Any development here could have an impact on these heritage designations. This site lies on the western edge of the historic core of the village and adjacent to Cheriton Barton any development here has the potential to expose archaeological deposits with the medieval and post-medieval settlement at Cheriton Fitzpaine. Given the potential impact on listed buildings, Conservation Area and archaeological deposits an overall negative and uncertain effect is considered.	-2/?	Design and layout which respects the character and the setting of the Conservation Area and listed buildings and archaeological investigation and appropriate mitigation measures would help mitigate the potential impact of this development on the built and historic environment and therefore a neutral effect would be considered although this remains uncertain as the impact on the archaeological deposits will depend on the results of the investigation.	0/?
C) Mitigating the effects of	Approximately half of the site is located in Flood Zone 3. The Flood Map for Surface Water shows a high risk of flooding from surface water in areas. A	-1	A policy requirement in the Local Plan seeks mitigation measures	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
climate change	negative effect is considered. Cheriton Fitzpaine has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered.		through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. If development avoided flood zone 3 a neutral effect is considered, however this may reduce the yield of the site. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on part of a farm and on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land. Given the relatively small area of the site a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 21 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and	Cheriton Fitzpaine is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
wellbeing	limited level of development, a neutral effect.			
I) Delivering the necessary infrastructure	Roads are narrow and access from outside of bend with substandard visibilities, necessary land is outside of the site boundary. Site is an existing farm and will have a traffic generation. Survey data of farm movements and transport statement would be required. Development should be limited to equivalent movements. An access via the doctor's surgery would need to be negotiated. There is existing capacity in the local schools to accommodate development from this individual site. Given the access difficulties presented and requirement of a transport statement but spare capacity at the school a slight negative and uncertain impact is considered.	-1/?	If access can be negotiated and achieved a neutral effect is considered, however uncertainty remains as this is reliant on negotiation. Also a transport statement is requirement. A neutral and uncertain effect is considered.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Fitzpaine. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Colebrooke

Colebrooke Glebe, Colebrooke

Option

Land with a gross site area of 1 (ha) at Colebrooke Glebe, Colebrooke is proposed for 15 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area which is typified by being an open, low lying flat landscape and is agriculturally prosperous. The proposed use of the site for housing will have some impact on the landscape character of the area and will be seen in the wider context of the landscape. In particular the site has distant views to the ridge line in the south east which would be affecting by developing this site. Some mitigation may be provided by the existing built environment however an overall a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation, overall a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	The site lies adjacent to the Colebrooke Conservation Area, a slight negative effect is considered.	-1	Design and layout which respects the character and the setting of the Conservation Area will help mitigate the impact, a neutral effect is therefore considered.	0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Colebrooke has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising	Development option is located on greenfield land. 0.94 ha (94% northern portion) of the site is located on Grade 2 very good quality agricultural land and 0.06ha (6% southern portion) is located on Grade 3, good / moderate quality agricultural land. Given the loss of very good quality and some good /	-2		-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
resource use	moderate quality agricultural land but the small site area, an overall negative effect is considered.			
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 15 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Colebrooke does not meet the criteria checklist to be designated a village in the Local Plan which is based on the physical characteristics of the settlement and the availability of three essential services (educational facility, convenience store and transport service), a slight negative effect overall.	-1		-2
I) Delivering the necessary infrastructure	The surrounding highway infrastructure consists of narrow lanes that are considered unsuitable to accommodate significant additional traffic. An adequate site access is considered achievable but would require the loss of an expanse of hedging to create the required visibility onto the highway. There are no education facilities in Colebrooke and therefore development will place additional pressure on home to school transport budget. Given the site access is achievable but additional pressure the highway infrastructure and school transport an overall negative effect is considered.	-2	A transport statement may be required to determine the impact of development on the surrounding highway infrastructure. If results deem development to be acceptable then a slight negative effect is considered as the lack of education facilities remains. An uncertain effect is also considered as the score is reliant on the outcome of	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			the transport statement.	

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Colebrooke. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Copplestone

Policy CO1: The Old Abattoir, Copplestone

Option

Land with a gross site area of 1.5 (ha) at Old Abattoir, Copplestone is proposed for 30 dwellings with 30% affordable housing and a 100 space railway station car park.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are a number of mature trees along the northern boundary of the site. This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The site is not visible from far away. Landscape impact is likely to be minimal. There may be a loss of mature trees from developing this site, a slight negative effect.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation to protect the mature trees therefore a neutral effect is considered.	0
B) Protection and	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
promotion of a quality built and historic environment				
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Copplestone has access to a bus and train service which could help reduce car travel and therefore carbon emissions, a positive effect. The provision of a railway station car park is a positive effect as this will encourage an alternative form of travel to the car for Copplestone and the wider community. Given the potential issue around surface water run off but the positive effects of the provision of the railway station car park and access to a bus and train service overall a significant positive effect is considered.	+3	A policy requirement in the Local Plan seeks the provision of a Sustainable Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance. The policy requires a 100 space car park, and as there is the benefit of a bus and train service overall a significant positive effect.	+3
D) Safeguarding and minimising resource use	Development option is located on some brownfield land and agricultural grade 3 land, a neutral effect. The land is a former abattoir and is classed as contaminated land which would require remediation, overall a negative effect is considered.	-2	The policy requires the assessment of land contamination and appropriate remediation. Remediation of contaminated land will be required where appropriate by the policy therefore a positive effect is considered.	+2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	Option provides for 30 new dwellings with 30% affordable housing, a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Copplestone is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	An adequate access is achievable from the existing access from Shambles Drive. The Mid Devon Community Infrastructure Evidence Report indicates that primary and secondary school pupils can be accommodated without expansion. Given the constraints to delivery, a slight negative effect is considered.	0	The policy requires a 100 space railway station car park in the eastern part of the site and the existing access point off Shambles Drive to serve both the housing and the car park, a positive effect. Given the potential constraints to delivery due to the gas main which is a slight negative effect but the positive impact of providing a new car park, an overall slight positive effect is considered.	+2

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools. There could be a secondary impact of this development as the 100 space railway car park will help reduce the reliance on cars.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Copplestone. Once completed the development will be

	permanent.
Spatial extent: (District wide / local)	This site option will help provide meet housing needs. This development also has the potential to impact the wider area by providing 100 space railway car park which can be used by those outside of the Copplestone area.

Land adjoining Dulings Meadow, Copplestone

Option

Land with a gross site area of 4.9 (ha) at Land adjoining Dulings Meadow, Copplestone is proposed for 118 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. Due to the land rising to the east and the large number of dwellings proposed there may be an impact on the surrounding land from far away. The loss of any of the mature trees on the site would also be damaging, overall a significant negative effect is considered.	-3	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment, however given the number of dwellings proposed a slight negative effect remains. Further mitigation could be provided by avoiding development on land rising to the east.	-1
B) Protection and promotion of a quality built and historic	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment				
C) Mitigating the effects of climate change	4.9ha (92%) of the site is located in flood zone 1 the lowest level of flood risk and 0.4ha (8%) is located in Flood zone 2 and 3. An unnamed watercourse passes through the centre of the site from east to west which is the source of flood zone 2 and 3. The site could contribute to surface water run off without appropriate mitigation measures. Copplestone has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus and train service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. If development avoided flood zone 3 a neutral effect is considered, however this may reduce the yield of the site. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 very good quality agricultural land. Given the relatively small size of the site a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	Development could boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site, a slight positive effect.	+1		+1
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 118 new dwellings a contribution towards future housing need, a significant positive effect. This level of housing provision could be out of scale with the settlement size of Copplestone and may need to be reduced to reflect the housing demand and need within the village.	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
H) Ensuring community health and wellbeing	Copplestone is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. However given the scale of development this may impact on existing services and facilities, therefore a slight negative effect is considered.	-1		-1
I) Delivering the necessary infrastructure	Access from Bewsley Hill is feasible but not favoured as it is narrow and lacks footways near its junction with the A377 an alternative access direct from the A377 is also feasible but would require the re-alignment of Elston Lane. Copplestone Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Q E Academy Trust however does have capacity to meet the requirements of this individual allocation. Given that access is feasible but would require realignment and the issues with the capacity of the primary school a negative effect is considered.	-2	Access to be provided from the A377 and the re-alignment of Elston Lane to ensure that access is deliverable. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities however Copplestone Primary School has no opportunities to expand within the current site. A neutral effect is considered if access is deliverable and the additional school infrastructure is provided. However there is an element of uncertainty due to the limited opportunities for school expansion within the existing site.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Copplestone. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Bewsley Farm, Copplestone
Option

Land with a gross site area of 9.7 (ha) at Bewsley Farm, Copplestone is proposed for 50 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is adjacent to the north of the village of Copplestone and is comprised of a large area of farmland rising away from the existing houses, with hedgerows and mature trees around the site. This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. Existing development will provide some mitigation however due to the rising nature of the ground; development could have an impact on distant views. Given the potential impact on distant views but existing development providing some mitigation and the loss of mature trees, overall a negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment a neutral effect is considered. Further mitigation could be provided by focussing development close to existing development to avoid the rising land that can be viewed from a distance.	0
B) Protection	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
and promotion of a quality built and historic environment				
C) Mitigating the effects of climate change	A stream runs along the western boundary and therefore a flood risk assessment may be required. The site is located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures. Copplestone has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus and train service on balance a neutral effect is considered. This remains uncertain as the impact of the stream is unknown.	0/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service. This remains uncertain as the impact of the stream is unknown.	+1/?
D) Safeguarding and minimising resource use	Development option is located on greenfield land which is considered to be negative impact on resource use. The site is located on Grade 3 good / moderate quality agricultural land, a slight negative effect.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	Option provides for 50 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Copplestone is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	There is a possible access from Bassett's Close (via an adjacent site) and Sunnymead, but it is not known whether third party land would be required however both Bassett's Close and Sunnymead are estate roads which have a limited capacity for additional traffic. Given it is not known if third party land is required to access the site an uncertain effect is considered. Two points of access can be achieved with an access road serving up to 50 dwellings but limiting factor would be capacity of junction onto A377 from Sunnymead. Assessment would be required to justify development up to 50. Copplestone Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Q E Academy Trust however does have capacity to meet the requirements of this individual allocation. Given an access is unknown and education capacity, an overall slight negative and uncertain effect is considered.	-1/?	If access is achievable without third party land or if an agreement can be made this would mitigate any access issue. A junction capacity assessment of the A377 should be undertaken to justify the number of dwellings. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities however Copplestone Primary School has no opportunities to expand within the current site. A neutral effect is considered if access is deliverable and the additional school infrastructure is provided. However there is an element of uncertainty due to the limited opportunities for	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			school expansion within the existing site.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Copplestone. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet the housing needs of Copplestone.

Culmstock

Policy CL1: Linhay Close, Culmstock

Land with a gross site area of 0.23 (ha) at Linhay Close, Culmstock is proposed for 6 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. Land is currently a field although does not appear to be grazed as recently been mowed. The land is generally flat, and landscape impacts would likely be minimal given the mitigating presence of the adjacent housing, a neutral effect.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
B) Protection and promotion of a quality built and historic environment	The site is located outside but adjacent the Culmstock Conservation Area, a slight negative impact.	-1	The policy requires design and layout to respect the character of the Conservation Area, overall a neutral effect.	0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site boundary has been amended, but the whole of the site remains in flood zone 1. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Culmstock has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks the provision of a Sustainable Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	The site is already partially developed with terraced new builds with the remaining part of the site located on greenfield land. The remaining portion of the site is located on Grade 3 good / moderate quality agricultural land, a slight negative effect as the site is relatively small.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	Option provides for 6 new dwellings with 30% affordable housing, a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Culmstock is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The site has good access. The Mid Devon Community Infrastructure Evidence Report indicates that development will put minor pressure on Culmstock Primary school and therefore some developer contributions will be required. Given the small scale of development it is anticipated that this development will not as an individual site put pressure on the local secondary schools. Overall a slight negative effect is considered given the minor pressure put on the primary school.	-1	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities a neutral effect overall.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Culmstock. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Policy CL2: Hunter's Hill, Culmstock

Land with a gross site area of 0.4 (ha) at Hunters Hill, Culmstock is proposed for 10 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies upon two landscape character areas. To the south west, the landscape character of the site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The north east part of the site falls within the 'Upper farmed and wooded valley slopes' landscape character area. Developing the higher reaches may result in breaking the skyline and dominating the existing residential development. It may also impact on the setting of the Blackdown Hills AONB. Some mitigation may be provided by existing development however given the impact of developing on the higher reaches of the original site area of 1ha and the potential impact on the setting of the Blackdown Hills AONB a negative effect is considered.	-2	The site has been reduced in size from the previous potential allocation to only encompass the southern part of the site, minimising the impact on the landscape character. The policy requires landscaping and design to protect the setting of the Blackdown Hills AONB. Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan also provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	This site lies in an area of archaeological potential with regard to known prehistoric activity in the vicinity as well as evidence of the iron industry that operated in the Blackdown Hills in the Roman and later periods, an overall slight negative and uncertain effect.	-1/?	The policy requires archaeological investigation and appropriate mitigation, overall a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site has been reduced in size and remains within flood zone 1. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Culmstock has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks the provision of a Sustainable Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			service.	
D) Safeguarding and minimising resource use	The site is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land, a slight negative effect as the site is relatively small.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 10 new dwellings with 30% affordable housing a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Culmstock is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	An adequate access to the site is achievable. The Mid Devon Community Infrastructure Evidence Report indicates that development will put minor pressure on Culmstock Primary school and therefore some developer contributions will be required. Given the small scale of development it is anticipated that this development will not as an individual site put pressure on the local secondary schools. Overall a slight negative effect is considered given the minor pressure put on the primary school.	-1	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities a neutral effect overall.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the

	local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Culmstock. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Culmstock Glebe and Rackfields, Culmstock

Option

Land with a gross site area of 1 (ha) at Culmstock Glebe and Rackfields, Culmstock is proposed for 25 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The site is open, and generally flat, and would be visible from afar, resulting in landscape impacts. Existing development provides some mitigation, overall a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation, a neutral effect is therefore considered.	0
B) Protection and promotion of a quality built and historic environment	The site lies in an area of archaeological potential with regard to known prehistoric activity in the vicinity as well as evidence of the iron industry that operated in the Blackdown Hills in the Roman and later periods. A number of listed buildings lie to the north of the site although none are adjoining. The site is adjacent to the Conservation Area with 0.03ha within Culmstock Conservation Area. Given the potential impact on the area of archaeological potential, setting of listed buildings and the Conservation Area a negative and uncertain effect is considered.	-2/?	If the following aspects are considered by development a neutral effect is considered. • Design and layout which respects the character and the setting of the Conservation Area and listed buildings. • Archaeological investigation and appropriate mitigation measures.	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			However this remains uncertain as the impact on the area of archaeological potential will depend on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest risk of flooding, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Culmstock has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	The site is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land, a slight negative effect, as the site is relatively small.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting	Option provides for 25 new dwellings a contribution towards future housing	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
housing needs	need, a positive effect.			
H) Ensuring community health and wellbeing	Culmstock is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The local highway network consists of narrow roads having restrictive alignments and there is poor access via a steep winding road which is a key route into village. The C391 is unsuitable to provide access due to inadequate visibility with its junction to Uffculme Road. Adequate access is achievable direct from Uffculme Road. Culmstock Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Cullompton Community College however does have capacity to meet the requirements of this individual allocation. As there are some limitations in providing access and issues around the capacity of Culmstock Primary School a negative effect is considered.	-2	If access is provided from Uffculme Road this will mitigate access issues. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Culmstock. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

The Croft, Culmstock
Option

Land with a gross site area of 1.7 (ha) at Uffculme Road, Culmstock is proposed for 53 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. There are views from the site across to the north and west, which are generally far reaching. Views from the south are limited by the topography, and to the east by other buildings within the village. There is potential for landscape impacts given the elevated position of the site. Adjacent dwellings are single storey, with many being at a lower level than the site, and therefore only provide a limited function in mitigating any impact of development. Given the limited function of existing development in providing mitigation and the potentially significant landscape impact of the site given its elevated position a negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation, a slight negative effect is considered as given the elevated position of the site some impact is likely to remain.	-1
B) Protection and promotion of a quality built and historic environment	The Culmstock Conservation Area lies to the north east of the site but the site is not adjacent to it. This site lies in an area of archaeological potential with regard to known prehistoric activity in the vicinity as well as evidence of the iron industry that operated in the Blackdown Hills in the Roman and later periods. Given the potential impact on the area of archaeological potential a slight negative and uncertain effect is considered.	-1/?	If archaeological investigation and appropriate mitigation measures are considered, a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. An ordinary watercourse is within the site /on the site boundary. Any alterations or works within the watercourse must be discussed with Devon County Council Flood Risk Management and Land Drainage Consent requested and approved where necessary. The site could contribute to surface water run off without appropriate mitigation measures, a negative	-1/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	effect overall. Culmstock has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flood risk but the benefit of a bus service on balance a slight negative effect is considered. This remains uncertain as the impact of the ordinary watercourse is unknown.		future maintenance. A flood risk assessment should be undertaken for the site to determine the impact of the watercourse within the site. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service. As the impact of the watercourse is unknown an uncertain effect remains.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land, a slight negative effect as the site is relatively small.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 53 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Culmstock is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering	The local highway network consists of narrow roads having restrictive	-2	If road widening and analysis of the	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
the necessary infrastructure	alignments. Site access is dependent on road widening and would require junction analysis of Town Hill & Fore Street and a safety audit. Culmstock Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Cullompton Community College however does have capacity to meet the requirements of this individual allocation. An overall negative effect is considered.		Town Hill & Fore Street and safety audit are undertaken to ensure access can be provided this would mitigate any access issues. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. Overall a neutral and uncertain effect is considered as provided road widening, analysis, access and school capacity can be provided it is possible this development will have a neutral effect however this is currently uncertain.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.

Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Culmstock. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Halberton

Policy HA1: Land adjacent Fishers Way, Halberton

Land with a gross site area of 0.6 (ha) at Land adjacent Fisher's Way, Halberton is proposed for 10 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The local countryside is of gently undulating fields, which can be viewed to the north and west. Views are medium distance, and the adjacent modern housing would mitigate some impact, a neutral effect.	0		0
B) Protection and promotion of a quality built and historic environment	This site lies in an area of archaeological potential with the HER recording prehistoric activity here and recent archaeological work to the west has identified prehistoric activity across the wider landscape, overall a slight negative and uncertain effect.	-1/?	The policy requires archaeological investigations and appropriate mitigation measures, overall a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. Groundwater flooding maps show a 25-50% chance of groundwater emergence within the site boundary. The site could contribute to surface water run off without appropriate mitigation measures. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or	-1	Based on recommendations provided by Devon County Council, groundwater monitoring is not required for this site, provided that necessary details are submitted	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Wimbleball Reservoir. Halberton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered.		with a drainage strategy. A policy requirement in the Local Plan seeks the provision of a Sustainable Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 1 excellent quality agricultural land. Given the loss of Grade 1 excellent quality agricultural land but the relatively small scale of the site, a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	Option provides for 10 new dwellings with 30% affordable housing a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Halberton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The Mid Devon Community Infrastructure Evidence Report indicates that the primary school can accommodate additional pupils arising from this development without expansion. Given the small scale of development it is anticipated that this development will not as an individual site put pressure on the local secondary schools. A larger site area was originally considered which could have been problematic on highway grounda, therefore a slight negative effect was considered.	-1	The site area has been reduced on highway grounds and the housing numbers reduced accordingly. Given that an adequate access is achievable and that this would be relatively small development now that the site area has been reduced, a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Halberton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will provide housing in Halberton.

Land at Blundells Road, Halberton
Option

Land with a gross site area of 1.25 (ha) at Land at Blundells Road, Halberton is proposed for 25 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site can be viewed from the south, east and north ridgelines, and would therefore could have a large impact on the surrounding landscape. Existing development would provide some mitigation and therefore a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation, a neutral effect is therefore considered.	0
B) Protection and promotion of a quality built and historic environment	The site is located within the Halberton Conservation Area and there is a group of listed buildings located to the east of the site. This site lies in an area of archaeological potential with the HER recording prehistoric activity here and recent archaeological work to the west has identified prehistoric activity across the wider landscape, a negative effect. Given the potential impact on the Conservation Area, listed buildings and area of archaeological potential an overall negative and uncertain effect is considered.	-2/?	If the following aspects are considered by development a neutral effect is considered. • Design and layout which respects the character and the setting of the Conservation Area and listed buildings. • Archaeological investigation and appropriate mitigation measures. However, this remains uncertain as the impact on the area of archaeological potential will depend on the results of the investigation	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. Only 1% of the site in the north western corner is in flood zone 3. An unnamed watercourse to the south of the site could cause potential flooding issues. The site could contribute to surface water run off without appropriate mitigation measures. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Halberton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a slight negative effect is considered and unknown impact due to the unnamed watercourse.	-1/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off and flood risk a slight positive effect is considered as there is the benefit of a bus service. An unknown impact is due to the unnamed watercourse directly south of the site.	+1/?
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 1 excellent quality agricultural land and a small portion of Grade 3 good / moderate quality agricultural land. Given the loss of Grade 1 excellent quality agricultural land and some grade 3 land but the relatively small site size, a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 25 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community	Halberton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	level of development, a neutral effect.			
I) Delivering the necessary infrastructure	The C769 east through Halberton is, due to narrow carriageway width's and lack of pedestrian facilities, unsuitable to cater for significant traffic generation. An access direct onto Lower Town road is achievable. Access to the east at Lower town can be achieved with some road improvements and would serve a development of up to 25 dwellings from a share surface road and potentially greater, however concerns still remain over the capacity of the priority system and a full capacity study should be undertaken to prove additional traffic is acceptable. There is existing capacity in the local schools to accommodate development from this individual site. Given that an adequate access is achievable but concerns over the capacity of the priority system, an overall slight negative and uncertain effect is considered.	-1/?	If a full capacity study is undertaken and demonstrates that additional traffic is acceptable a neutral effect is considered. As this remains uncertain and overall neutral and uncertain effect is considered.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Halberton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Hemyock

Policy HE1: Depot, Hemyock

Option

Land with a gross site area of 0.55 (ha) at Depot, Hemyock is proposed for 10 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is located within the Blackdown Hills Area of Outstanding Natural Beauty (AONB) however it is a small infill site within the village and therefore a negative impact on the AONB is not considered. This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. Any impact is likely to be minimal given the surrounding housing development on all sides. The site is therefore unlikely to have an impact on the special qualities of the AONB. The barns/outbuildings could also be a habitat for protected species such as barn owls, overall a slight negative and uncertain effect is considered as the wildlife potential is unknown.	-1/?	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan also provide some mitigation therefore a neutral effect is considered, although a uncertain effect remains as there is an unknown in terms of wildlife potential with regard to the barns/outbuildings on site.	0/?
B) Protection and promotion of a quality built and historic environment	The site lies in an area of high archaeological potential, with recent archaeological investigations in and around Hemyock exposing evidence of medieval and early post-medieval industrial activity around the village. Development could also result in the loss of some Devon bank, a slight negative and uncertain effect. It would however be an infill site which has a history of untidy and informal uses. In considering the potential for the improvement of the site but the potential for the impact on the area of archaeological potential, on balance a neutral yet uncertain effect is considered. This is an infill site, which has a history of untidy and informal uses, including planning permissions which have not been implemented.	-0/?	The policy requires the replacement provision of any lost Devon bank. The policy also requires archaeological investigations and appropriate mitigation measures, this will provide mitigation although it remains uncertain as the impact will depend on the results of the investigation. Given the history of untidy and informal uses of the site, overall a slight positive effect	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			is considered.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Hemyock has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks the provision of a Sustainable Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located partly on greenfield land and partly brownfield land. However given the size of the site with only the rear of the site being greenfield which can only be accessed using the residential access point it is unlikely this land will be used for agricultural purposes and therefore a slight positive effect is considered.	+1		+1
E) Promoting economic growth and employment	There would be a small loss of commercial use and therefore a slight negative effect is considered.	-1		-1
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 10 new dwellings with 30% affordable housing a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Hemyock is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary	There is potential for the development to affect the surrounding highway network. The Mid Devon Community Infrastructure Evidence Report	-2/?	The policy requires 10 dwellings	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
infrastructure	indicates that development will put minor pressure on Hemyock Primary school and therefore some developer contributions will be required. Given the small scale of development it is anticipated that this development will not as an individual site put pressure on the local secondary schools. Overall a negative and uncertain effect is considered given the minor pressure put on the primary school and the highway network.		with 30% affordable housing subject to a Transport Statement. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities, overall a neutral and uncertain effect is considered as the understanding of the impact on the highway network is dependent on the Transport Statement.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Cumulatively development may impact on the setting and character of the Blackdown hills Area of Outstanding Natural Beauty. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Hemyock. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land South West of Conigar Close, Hemyock

Option

Land with a gross site area of 1.1 (ha) at Land South West, Hemyock is proposed for 35 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is located within the Blackdown Hills Area of Outstanding Natural Beauty (AONB), given that this site is on the edge of the village there may be some impact on the AONB. This sites falls within the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium-scale fields of permanent pasture. There are views into and from the site from ridges to the north and south. There would be some landscape impact, but a high degree of mitigation would be provided by the adjacent housing to the north and east. However given the site is within an AONB, a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation. However given that the site is on the edge of the village some impact on the AONB may remain, therefore a slight negative and uncertain effect is considered as the impact will depend on the design of the development.	-1/?
B) Protection and promotion of a quality built and historic environment	Recent archaeological work at the northern end of this site has revealed the presence of an, as yet, undated, iron working area. It is known that this industry was operation from at least the Roman period through to the medieval period, overall a slight negative and uncertain effect is considered.	-1/?	If archaeological investigation and appropriate mitigation measures are considered, a neutral effect although this remains uncertain as the impact will depend on the results of the investigation	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. There is also an unnamed watercourse flowing through the west of the site, the impact of which is not yet known. Hemyock has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and flood risk but the benefit of a bus service on balance a slight negative and uncertain effect is considered.	-1/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A Flood Risk Assessment would be required to determine the impact of the	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			unnamed watercourses. If development avoided areas of flood risk this would mitigate any impact. Given the mitigation of surface water run off and flood risk a slight positive effect is considered as there is the benefit of a bus service. Uncertainty remains as the impact of the unnamed watercourse is not yet known.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. There is a historic quarry to south west corner/edge of site considered contaminated land. The site is located on Grade 3 good /moderate quality agricultural land. Given the loss of good / moderate quality agricultural land and presence of contaminated land a significant negative effect is considered.	-3	If the assessment of land contamination and appropriate remediation is undertaken a slight negative effect is considered as the site is on Grade 3 agricultural land but is a small size.	-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 35 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community	Hemyock is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	level of development, a neutral effect.			
I) Delivering the necessary infrastructure	The local highway network consists largely of narrow roads having restrictive alignments. The north section of this site is currently being developed while access to the south section through Conigar Close and Logan Way a residential estate could be achievable. Hemyock Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Cullompton Community College however does have capacity to meet the requirements of this individual allocation. Given that an adequate access is achievable but there is limited capacity at the primary school an overall slight negative effect is considered.	-1	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. Overall a neutral but uncertain effect is considered.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Cumulatively development may impact on the setting and character of the Blackdown hills Area of Outstanding Natural Beauty. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Hemyock. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Culmbridge Farm, Hemyock
Option

Land with a gross site area of 6.1 (ha) at Culmbridge Farm, Hemyock is proposed for 80 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is located within the Blackdown Hills Area of Outstanding Natural Beauty (AONB). A number of important trees within the site (Tree Preservation Orders s southern side of site). This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. There are views into the site from south and western ridges. The adjacent housing and farm buildings would provide some mitigation. Given the sites location in the Blackdown Hills AONB and potential loss of mature trees an overall negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment. However given that the site is on the edge of the village some impact on the AONB may remain, therefore a slight negative and uncertain effect is considered as the impact will depend on the design of the development.	-1/?
B) Protection and promotion of a quality built and historic environment	The recent discovery of Hemyock's industrial heritage – pottery (17th century) and iron production (Roman to medieval) – raises the potential for development around the village to expose archaeological and artefactual deposits associated with these industries, overall a slight negative and uncertain effect.	-1/?	If archaeological investigation and appropriate mitigation measures are considered, a neutral effect, although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. There are also unnamed watercourses	-1/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
change	flowing through the north and east of the site, the impact of which is not yet known. Hemyock has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and flood risk but the benefit of a bus service on balance a slight negative effect is considered.		Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A Flood Risk Assessment would be required to determine the impact of the unnamed watercourses. If development avoided areas of flood risk this would mitigate any impact. Given the mitigation of surface water run off and flood risk a slight positive effect is considered as there is the benefit of a bus service. Uncertainty remains as the impact of the unnamed watercourse is not yet known.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. North eastern corner is previously developed land with farm buildings associated with a poultry farm. The site is located on Grade 3 good / moderate quality agricultural land. Given the loss of good / moderate quality agricultural land but use of previously developed land and the relatively small size of the site a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	The redevelopment of the north east corner would result in the loss of some farm buildings, a slight negative effect.	-2	The provision of some employment land to replace the loss of the farm buildings or the relocation of these farm buildings which have a role in	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			promoting economic growth and employment would result in a neutral effect.	
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 80 new dwellings a contribution towards future housing need, a positive effect. This level of housing provision could be out of scale with the settlement size of Hemyock and may need to be reduced to reflect the housing demand and need in the vicinity.	+2		+2
H) Ensuring community health and wellbeing	Hemyock is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Level changes between the road and field mean access is only achievable from the north east corner. The redevelopment of the north east corner would require the relocation of the existing farm buildings. The local highway network consists largely of narrow roads having restrictive alignments. Hemyock Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Cullompton Community College however does have capacity to meet the requirements of this individual allocation. Overall a negative impact is considered given the limitations of access and educational capacity issues.	-2	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. If access is provided from the north east corner and the farm buildings are relocated overall a neutral but uncertain effect is considered.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Cumulatively development may impact on the setting and character of the Blackdown hills Area of Outstanding Natural Beauty. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Hemyock. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land north of Culmbridge Farm, Hemyock

Option

Land with a gross site area of 5.2 (ha) at Land north of Culmbridge Farm, Hemyock is proposed for 80 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is located within the Blackdown Hills Area of Outstanding Natural Beauty (AONB). 0.5ha of the site (north east corner) is noted to be a Priority Habitat for its grassland. The majority of the site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area to the south west. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. A small portion of the site in the north east of the site falls within the 'Sparsely settled farmed valley floors' landscape character area. This area is typified by the presence of rivers or streams and related flat or gently sloping valley bottoms within the low lying areas of the district. There are views into and out of the site from ridges to the north, south and west. The site is also elevated, and there would likely be large landscape impacts as a result of developing the whole	-3	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment. Furthermore if the north east corner is excluded from development this would mitigate any impact on the Priority Habitat. However given that the site is on the edge of the village some	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	site, some mitigation may be provided by existing development. Given the sites location in the Blackdowns AONB, impact on the Priority Habitat and some impact on landscape setting, cumulatively a significant negative effect is considered.		impact on the AONB may remain, therefore a slight negative and uncertain effect is considered as the impact will depend on the design of the development.	
B) Protection and promotion of a quality built and historic environment	The recent discovery of Hemyock's industrial heritage – pottery (17th century) and iron production (Roman to medieval) – raises the potential for development around the village to expose archaeological and artefactual deposits associated with these industries, a slight negative and uncertain effect.	-1/?	If archaeological investigation and appropriate mitigation measures are considered, a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	91% South West and West of the site is located in flood zone 1 the lowest level of flood risk with the remaining 8% along North East and East side located in Flood zone 2 and 1% in the North East in Flood zone 3. As flood zone 2 and 3 is a very small percentage of the site, it is considered that this along with the fact that the site could contribute to surface water run off without appropriate mitigation measures, this would only result in a slight negative effect. Hemyock has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land. 3.3ha (63% South) is located on Grade 3 good / moderate quality agricultural land and 1.9ha (37% North) is located on Grade 4 poor quality agricultural land. Given the loss of good / moderate quality agricultural land and some poor agricultural land but the relatively small size of the site an	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	overall slight negative effect.			
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 80 new dwellings a contribution towards future housing need, a significant positive effect.	+2		+2
H) Ensuring community health and wellbeing	Hemyock is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	An adequate access is achievable. Hemyock Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Cullompton Community College however does have capacity to meet the requirements of this individual allocation. Given that an adequate access is achievable and but issues around education capacity, an overall slight negative effect is considered.	-1	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. Overall a neutral and uncertain effect is considered.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact

	upon traffic, put pressure on services and facilities and the current provision of infrastructure. Cumulatively development may impact on the setting and character of the Blackdown hills Area of Outstanding Natural Beauty. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Hemyock. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land adj Cemetery, Hemyock

Option

Land with a gross site area of 4.8 (ha) at Land adj Cemetery, Hemyock is proposed for 107 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is located within the Blackdown Hills Area of Outstanding Natural Beauty (AONB). This site falls almost exclusively within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. However, the site also sits on the boundary between the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium-scale fields of permanent pasture. The site is open in character, offering wide views to the west, north and east. In particular the high ridge line to the north is clearly visible. There is housing to the east which will mitigate some impact and modern housing on the south side of Culmstock Road, which is at a higher level than the site and would therefore itself be clearly visible when viewed from the elevated land to the north. Given the number of dwellings	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation. However given that the site is on the edge of the village some impact on the AONB may remain, therefore a slight negative and uncertain effect is considered as the impact will depend on the design of the development.	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	proposed but some mitigation is provided by existing development and the location of the site in the Blackdown Hills AONB a negative effect is considered.			
B) Protection and promotion of a quality built and historic environment	The site lies in an area of high archaeological potential, with recent archaeological investigations in and around Hemyock exposing evidence of medieval and early post-medieval industrial activity around the village, a slight negative and uncertain effect.	-1/?	If archaeological investigation and appropriate mitigation measures are considered, a neutral effect, although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	An ordinary watercourse is on the site boundary. Any alterations or works within the watercourse must be discussed with Devon County Council Flood Risk Management and Land Drainage Consent approved where necessary. Flood Zone 3 is within the site boundary however the majority of the site is Flood Zone 1. Groundwater flooding maps show a 25-50% chance of groundwater emergence within the site boundary. Some historic flooding has occurred within the site boundary. Any historic flooding information should be used in conjunction with development proposals and any flood risk assessment. The site could contribute to surface water run off without appropriate mitigation measures. Hemyock has access to a bus service which could help reduce car travel and therefore carbon emissions. Overall a negative effect remains given the potential issues around flood risk but the benefit of a bus service. This remains uncertain as the impact of the ordinary watercourse is unknown.	-2/?	Avoidance of land within flood zone 3, the provision of a flood risk assessment, drainage strategy and SUDs would result in a neutral effect being considered. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service. This remains uncertain as the impact of the ordinary watercourse is unknown.	+1/?
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good /moderate quality agricultural land. There is the potential for land contamination associated with the adjacent cemetery. Given the loss of good / moderate quality agricultural land, and land contamination a significant negative effect is considered.	-2	Assessment of land contamination and appropriate remediation would mitigate impact from land contamination. A slight negative effect remains as although the site	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			is relatively small it is on Grade 3 agricultural land.	
E) Promoting economic growth and employment	There may be a slight positive impact for local construction firms and associated trades who would be able to undertake contract work.	+1		+1
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 107 new dwellings a contribution towards future housing need, a significant positive effect.	+3		+3
H) Ensuring community health and wellbeing	Hemyock is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. However given the scale of development this may impact on existing services and facilities, therefore a slight negative effect is considered.	-1		-1
I) Delivering the necessary infrastructure	Suitable access can be achieved with off-site highway improvements, provision of footways and cycle linkages /emergency vehicle access. May be limited by flood zones would seek junction analysis in Culmstock at the junction of Fore street and Town Hill. Possible junction mitigation will be required. A number of LTP schemes are identified in Hemyock and contributions will be sought towards their delivery. Hemyock Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Cullompton Community College however does have capacity to meet the requirements of this individual allocation. Given that an adequate access is achievable although there may be some issues around the capacity of junctions and potential issues around education capacity, an overall negative impact is considered.	-2	Highway impacts can be mitigated through suitable access achieved with off-site highway improvements, provision of footways and cycle linkages/emergency vehicle access, junction analysis and mitigation where required and contributions to LTP schemes. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. Overall a neutral and uncertain effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Cumulatively development may impact on the setting and character of the Blackdown hills Area of Outstanding Natural Beauty. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Hemyock. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Brookridge Timber, Hemyock (Commercial)

Option

Land with a gross site area of 1.8 (ha) at Brookridge Timber, Hemyock is proposed for 7,200 sqm commercial floorspace.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is located within the Blackdown Hills Area of Outstanding Natural Beauty (AONB). The main part of the site falls within the 'Lower rolling farmed and settled valley slopes landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. A small portion of the eastern part of the site falls within the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being lush and fertile. The site is screened from the north, east and west views. There are views into and out of the site from a southern ridge. Given that there are views from the southern ridge a slight negative effect and the fact that the site is within the AONB overall a negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment. However given that the site is in an isolated location away from the village some impact on the AONB may remain, therefore a slight negative effect is considered.	-1
B) Protection and promotion of a quality built and historic environment	There is no anticipated impact.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Hemyock has access to a bus service which could help reduce car travel and therefore carbon emissions. However as the site is 400m from the eastern edge of Hemyock outside the existing settlement limit as has no footpath the benefit of the bus service for this site is limited. Given the potential issues around surface water runoff and the limited benefit of a bus service on balance a negative effect is considered.	-2	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water runoff but the limited benefit of a bus service a slight negative effect	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			remains.	
D) Safeguarding and minimising resource use	Development option is located on brownfield land, a positive effect.	+2		+2
E) Promoting economic growth and employment	The option provides for 7,200 sqm of commercial floorspace, a positive effect.	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	Hemyock is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. However given the location of the development 400m away from the settlement edge, a slight negative effect is considered.	-1		-1
I) Delivering the necessary infrastructure	An adequate access is achievable. Access from north, east and south. The site has a wide access on its north edge with good visibility and sufficient space for lorry movements. There are currently no pedestrian and cycle links to the site. Given that an adequate access is achievable but there is there is a lack of pedestrian and cycle links to the site an overall slight negative effect is considered.	-1	The provision of pedestrian and cycle link would provide some mitigation. Policy S8 provides mitigation by setting out that developers will be expected to	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Cumulatively development may impact on the setting and character of the Blackdown hills Area of Outstanding Natural Beauty.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Hemyock. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet employment needs.

Kentisbeare

Land by Kentisbeare Village Hall, Kentisbeare

Option

Land with a gross site area of 0.8 (ha) at Land by Kentisbeare Village Hall, Kentisbeare is proposed for 26 dwellings & 500 sqm floor space.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The site is enclosed above the village hall, by existing vegetation and topography	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	which would limit the overall impact, a neutral effect.			
B) Protection and promotion of a quality built and historic environment	The site boundary is adjacent to the Kentisbeare Conservation Area to the north. There is a potential impact on the setting of the parish church a listed building. This site lies on the edge of the historic core of the settlement and any development here has the potential to expose archaeological and artefactual deposits associated with the early settlement here, overall a negative and uncertain effect is considered.	-2/?	If the following aspects are considered by development a neutral effect is considered. • Design and layout which respects the character and the setting of the Conservation Area and listed buildings. • Archaeological investigation and appropriate mitigation measures. Although this remains uncertain as the impact on the archaeological and artefactual deposits will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Kentisbeare has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. 0.2ha (25% South) is located on Grade 2 very good quality agricultural land and 0.6ha (75% North) is located on Grade 3 good / moderate quality agricultural land, a neutral effect. As the site is relatively small but some land is Grade 2 quality a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	Option provides 500 sqm of commercial floorspace helping to diversify the economy and encourage inward investment, a positive effect.	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 26 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Kentisbeare is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	An acceptable access is achievable and there are no issues with the route to the A373, although other local roads are narrow, having restrictive alignments. Kentisbeare Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Cullompton Community college however does have capacity to meet the requirements of this individual allocation. Given that an adequate access is achievable but the potential issue around school capacity a slight negative effect is considered.	-1	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. Overall a neutral but uncertain effect is	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			considered.	

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Kentisbeare. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing and commercial needs.

Lapford

Land between the Primary School & the Church, Lapford

Option

Land with a gross site area of 1.3 (ha) at Land between the Primary School & the Church, Lapford is proposed for 42 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium scale fields of permanent pasture. Whilst the site is elevated, so are the adjoining built up uses. There are wide views to the south, though the uses immediately to the south do screen the site relatively well, overall a neutral effect.	0		0
B) Protection and	The site is located next to a listed church to the west, a slight negative effect is considered.	-1	Design and layout which respects	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
promotion of a quality built and historic environment			the character and the setting of the listed building would mitigate any impact, a neutral effect.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Lapford has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus and train service on balance a slight positive effect is considered.	+1	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a positive effect is considered as there is the benefit of a bus and train service.	+2
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land, overall a slight negative effect	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 42 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring	Lapford is a designated village under policy S13, it has the three essential	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
community health and wellbeing	services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.			
I) Delivering the necessary infrastructure	There is existing capacity in the local schools to accommodate development from this individual site. The capacity of the junction onto Main C480 (north-south road through village from the U606 (road running along southern boundary of site) is questioned, an uncertain effect. Access to the site can be achieved with adequate visibility. There are concerns over poor alignment gradient lack of footways and additional highway safety risks to pedestrians, in particular school children at the adjacent school. There is a need for additional footway over frontage and link to school, overall a slight negative effect and uncertain effect.	-1/?	An assessment of the junction onto the main C480 from the U606 and provision of footway over frontage and link to the school would provide mitigation, overall a neutral but uncertain effect is considered as the capacity of the junction will depend on the results of the assessment.	0/?

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Lapford. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land south of Sandhurst, Lapford

Option

Land with a gross site area of 0.95 (ha) at Land south of Sandhurst, Lapford is proposed for 18 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This sites falls within the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium-scale fields of permanent pasture. However the site is likely to be viewed within the context of the existing built form, which is at a higher level than the site and would mitigate some of the impact, a neutral effect.	0		0
B) Protection and promotion of a quality built and historic environment	The Grade II listed congregational church is located on north side of the road to the west, however it is not anticipated that development will have an impact on this listed building. It is not anticipated that the development of this area will have an archaeological impact a neutral effect overall is therefore considered.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. An ordinary watercourse is on the site boundary. The site could contribute to surface water run off without appropriate mitigation measures. Lapford has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and the ordinary watercourse but the benefit of a bus and train service on balance a neutral effect is considered. This remains uncertain as the impact of the ordinary watercourse is unknown.	0/?	A policy requirement in the Local Plan seeks the provision of a Sustainable Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance, overall a neutral effect. Any alterations or works within the watercourse must be discussed with Devon County Council Flood Risk Management and Land Drainage Consent requested and approved where necessary. Given the mitigation of flood risk a positive effect is considered as there is the benefit of a bus and train service. This	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			remains uncertain as the impact of the ordinary watercourse is unknown.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land, given the relatively small scale of the site a slight negative effect.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 18 new dwellings with 30% affordable housing a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Lapford is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Access is technically feasible but off a road which has limited footway provision and blind bends and will attract pedestrian traffic to the school. May be feasible if it can be established if a footpath can be provided to the main road via Moorland View. The Mid Devon Community Infrastructure Evidence Report indicates that primary and secondary school pupils can be accommodated without expansion. Overall a slight negative effect is considered due to highway difficulties.	-1	Mitigation could be provided through the provision of a footpath link through the site linking Moorland View to Eastington Lane, overall a neutral effect.	0

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area

	could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Lapford. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing need.

Morchard Bishop

Policy MO1: Greenaway, Morchard Bishop

Land with a gross site area of 1.2 (ha) at Land west of Greenway, Morchard Bishop is proposed for 20 dwellings with 30% affordable.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by its gently rolling and strongly undulating form and an intensively farmed agricultural area. However, development of this site would have minimal impact on character of landscape as it is bound to the east by existing development which already provides a backdrop of the built environment, a neutral effect.	0		0
B) Protection and promotion of a quality built and historic environment	The site lies in an area of archaeological potential to the south of a possible prehistoric settlement or funerary monument, overall a negative and uncertain effect.	-1/?	The policy requires archaeological investigations and appropriate mitigation measures, overall a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site has been increased from the original option, but remains within flood zone 1. The site could contribute to surface water run off without appropriate mitigation measures. Morchard Bishop has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the	0	A policy requirement in the Local Plan seeks the provision of a Sustainable Urban Drainage Scheme to deal with all surface water from development and arrangements for future	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	benefit of a bus service on balance a neutral effect is considered.		maintenance, overall a neutral effect. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land; given the relatively small scale of the site a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 20 new dwellings with 30% affordable housing a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Morchard Bishop is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0	The policy requires the provision of a footpath link into the estate to the east, overall a slight positive effect.	+1
I) Delivering the necessary infrastructure	There is an existing farm access into the site from the road immediately to the South and a possible further access via the eastern boundary from the Greenway Estate, this would require road widening. The Mid Devon Community Infrastructure Evidence Report indicates that primary and secondary school pupils can be accommodated without expansion. Given that an adequate access is achievable but would require road widening a	-1	The policy requires road widening across site frontage, provision of appropriate visibility splays and replacement provision of any lost Devon bank, overall a neutral	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	slight negative effect is considered.		effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Morchard Bishop. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Tatepath Farm, Morchard Bishop
Option

Land with a gross site area of 0.5 (ha) at Tatepath Farm, Morchard Bishop is proposed for 16 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by a gently rolling and strongly undulating landscape which is intensively farmed. The impact of developing this site would be minimal as there are already a large number of buildings already on the site, a neutral effect.	0		0
B) Protection and promotion of a quality built and historic	Tatepath Farm is separated from the main body of the village, being located a distance along a relatively narrow lane, a slight negative effect is therefore considered.	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment				
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Morchard Bishop has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Although the site contains agricultural buildings it is classified as greenfield land and is Grade 3 agricultural land. There is possible land contamination. Overall a significant negative effect is considered given the potential for land contamination and the fact that the site is on Grade 3 agricultural land.	-3	The assessment of land contamination and appropriate remediation would mitigate any contamination impact. However the land is still classed as Grade 3 agricultural land, as this is small site, only a slight negative impact is considered.	-1
E) Promoting economic growth and employment	Development of the site would result in the loss of a number of agricultural units a reduction in rural prosperity, a negative effect.	-2	The relocation of these agricultural units would mitigate any impact, a neutral effect.	0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 16 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
H) Ensuring community health and wellbeing	Morchard Bishop is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	An adequate access is achievable. There is existing capacity in the local schools to accommodate development from this individual site. Given that an adequate access is achievable and there is educational capacity a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Morchard Bishop. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs

Church Street, Morchard Bishop

Option

Land with a gross site area of 2.6 (ha) at Church Street, Morchard Bishop is proposed for 25 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural	The middle of the site features an old established tree which may be worthy of a Tree Preservation Order. The site falls within the 'Lower rolling farmed	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment	and settled valley slopes' landscape character area. This area is typified by a gently rolling and strongly undulating landform which is intensively farmed. The site is surrounded by three sides which would provide landscape mitigation. Given the potential loss of the important tree within the site a slight negative effect is considered.		Plan provide some mitigation therefore a neutral effect is considered.	
B) Protection and promotion of a quality built and historic environment	The site is adjoining the Conservation Area. There are a large number of listed buildings immediately adjacent to the site on the road to the south. The site lies on the edge of the historic core of the village and to the south of the site of the former vicarage and there is evidence of prehistoric activity in the wider landscape. A negative and uncertain effect is considered due to the potential impact on the Conservation Area, listed buildings and archaeology.	-2	If the following aspects are considered by development a neutral effect is considered. • Design and layout which respects the character and the setting of the Conservation Area and listed buildings. • Archaeological investigation and appropriate mitigation measures. Although this remains uncertain as the impact on the archaeology will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures. Morchard Bishop has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of flood risk a slight positive effect is considered as	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land, a slight negative effect as the site is relatively small.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 25 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Morchard Bishop is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. A public footpath bisects the site and the site has been proposed as Local Green Space by the community, therefore a negative impact is considered.	-2		-2
I) Delivering the necessary infrastructure	The eastern part of the site is potentially compatible although the access and relationship with development on Church Street and Old Rectory Gardens may be problematic. Access is achievable from Rectory Gardens, but third party land may be required, an uncertain effect. Access from Old Rectory Gardens would serve 25 dwellings with pedestrian link to Church St is achievable. There is existing capacity in the local schools to accommodate development from this individual site. Given that an adequate access is achievable but third party land may be required, an overall uncertain effect	?	If access is achieved a neutral effect is considered although this may still be dependent on third party land therefore a neutral and uncertain effect is considered.	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	is considered.			

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Morchard Bishop. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Newton St Cyres

Policy NE1: Court Orchard, Newton St Cyres

Land with a gross site area of 2.7 (ha) at Court Orchard, Newton St Cyres is proposed for 25 dwellings with 30% affordable housing and a new primary school.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area, which is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The landscape to the north of the site opens out and is relatively flat, with views that are not distant from the site, it being largely screened by the existing field boundaries. The adjacent housing would provide some level of mitigation from developing the site for additional dwellings. However as there may be some loss of field boundaries and if lost this would impact on the landscape	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for landscape and designated site impacts therefore a neutral effect is considered.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	and approximately half of the site (southern section) is located in an area of Priority Habitat (which includes newly planted trees) an overall negative effect is considered.			
B) Protection and promotion of a quality built and historic environment	This site lies in an area of archaeological potential with the Historic Environment Record showing a concentration of prehistoric archaeological sites. The site contains the remnants of an extensive water meadow system, overall a slight negative and uncertain effect is considered.	-1/?	The policy requires archaeological investigations and appropriate mitigation measures, overall a neutral effect is considered although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The majority of the site lies in Flood Zone 1 with the eastern portion located in Flood zones 2 and 3. The site boundary has changed since the Options consultation to extend to the north hand take out part of the site in the flood zones 2 and 3. The majority of the site remains in the flood zone 1 to the west and flood zones 2 and 3 to the east, due to the Shuttern Brook. The site could contribute to surface water run off without appropriate mitigation measures. Newton St Cyres has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issue around flooding but the benefit of a bus and train service on balance a neutral effect is considered.	0	The policy requires school sports provision only within flood zone 2 and 3 to the east of the site. A policy requirement in the Local Plan seeks the provision of a Sustainable Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance, overall a neutral effect. Given the mitigation of flood risk a positive effect is considered as there is the benefit of a bus and train service.	+2
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 very good quality agricultural land. As the site is relatively small, overall a negative effect is considered.	-2		-2
E) Promoting	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
economic growth and employment				
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 25 new dwellings with 30% affordable housing a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Newton St Cyres is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect. The provision of a new primary school will help provide for the development but also has a wider community benefit with the new school being provided in a safer location in the village, overall a positive effect is considered.	+2		+2
I) Delivering the necessary infrastructure	The site has sufficient highway frontage to enable the provision of an adequate access however the narrow carriageway approaching the A377 would be likely to restrict traffic generation, a slight negative effect. The Mid Devon Community Infrastructure Evidence Report secondary school pupils can be accommodated without expansion. Development of this site will also provide a new primary school. An overall slight positive effect is considered given the provision of a new school but the narrow carriageway approaching the A377 likely to restrict traffic generation.	+1	The policy requires the widening of Station Road to reduce congestion. The policy also provides for 1.1 hectares for a new primary school at no cost to the Local Education Authority, a positive effect overall.	+2

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Newton St Cyres. Once completed the development will be permanent.

Spatial extent: (District wide / local)	This site option will help meet housing needs. It also will provide a new site for the local primary school.

Land west of Tytheing Close, Newton St Cyres Option

Land with a gross site area of 2 (ha) at Land west of Tytheing Close, Newton St Cyres is proposed for 48 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There is a very small wooded area on the south eastern portion of the site which could potential be a habitat for various types of biodiversity. There are previous records of badger sightings within the site. The site is located in the 'Lower rolling farmed and settled valley slopes' landscape character area. It is characterised by a gently rolling and undulating landscape with light soils which are intensively farmed. The site is very open in character and offers very wide views to the lower valley floor and ridges to the north and west. The proximity of the Tytheing Close housing to the east may provide some mitigation, particularly if development is focused within the south eastern edge. Overall a negative effect is considered given the potential impact on the landscape and wildlife.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment a neutral effect is considered. Further mitigation may be provided if development was focussed on the south eastern edge.	0
B) Protection and promotion of a quality built and historic environment	This site lies in an area of archaeological potential with the Historic Environment Record showing a concentration of prehistoric archaeological sites, an overall slight negative and uncertain effect.	-1/?	If archaeological investigation and appropriate mitigation measures are considered, a neutral effect, although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Newton St Cyres has access to a bus and train service which could help reduce car travel and therefore carbon	+1	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	emissions. Given the potential issues around surface water run off but the benefit of a bus and train service on balance a slight positive effect is considered.		Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water a positive effect is considered as there is the benefit of a bus and train service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 very good quality agricultural land, as the site is relatively small an overall negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 48 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Newton St Cyres is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The site is considerably elevated above the adjacent A377 and therefore for reasons of access, the land requirement would be likely to severely restrict the development potential of the site, a slight negative effect. There is existing capacity in the local schools to accommodate development from this individual site. Given that an adequate access is difficult to achieve an	-1	If a lower yield was considered for this site, the restrictions regarding access would no longer apply and therefore a neutral effect is considered.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	overall slight negative effect is considered.			

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Newton St Cyres. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet the housing needs of Newton St Cyres.

Land east of Tytheing Close, Newton St Cyres

Option

Land with a gross site area of 2 (ha) at Land west of Tytheing Close, Newton St Cyres is proposed for 64 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is located in the 'Lower rolling farmed and settled valley slopes' landscape character area. It is characterised by a gently rolling and undulating landscape with light soils which are intensively farmed. The site is very open in character and offers very wide views to the lower valley floor and ridges to the north and east. The proximity of the Tytheing Close housing to the west may provide a level of mitigation against any impact on the landscape from developing the site, particularly if development is focused along the western edge of the site, a slight negative effect is considered given the potential landscape impact.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation, a neutral effect is therefore considered. Further mitigation may be provided by focussing development on the western edge of the site.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
B) Protection and promotion of a quality built and historic environment	This site lies in an area of archaeological potential with the Historic Environment Record showing a concentration of prehistoric archaeological sites. The field to the south contains two substantial prehistoric or Romano-British enclosures, a slight negative and uncertain effect.	-1/?	If archaeological investigation and appropriate mitigation measures are considered, a neutral effect, although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Newton St Cyres has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus and train service on balance a slight positive effect is considered.	+1	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water a positive effect is considered as there is the benefit of a bus and train service.	+2
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 very good quality agricultural land. Given the loss of very good quality agricultural land but the site is relatively small an overall negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
retail				
G) Meeting housing needs	Option provides for 64 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Newton St Cyres is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The site has sufficient frontage to enable adequate visibility splays to be provided. Newton St Cyres Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Q E Academy Trust however does have capacity to meet the requirements of this individual allocation. Overall a slight negative effect given the issues around primary school capacity.	-1	If a new primary school is provided for by another allocated site such as 'Court Orchard' this will mitigate any education impact a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Newton St Cyres. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet the housing needs of Newton St Cyres.

Oakford

Land at Oakford, Oakford

Option

Land with a gross site area of 0.5 (ha) at Land west of Land at Oakford, Oakford is proposed for 5 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium-scale fields of permanent pasture. The impact of development on this site would be low, due to the screening provided by the hedgerow and trees. Development on the site would only be visible from three dwellings. However as development could result in the loss of the hedgerows and trees which provide screening a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	The site is located within the Oakford Conservation Area. This site lies on the edge of the historic core of Oakford and any development here has the potential to expose archaeological deposits associated with the early settlement here. Given the potential impact on the Conservation area and archaeology a negative and uncertain effect is considered.	-2/?	If the following aspects are considered by development a neutral effect is considered. • Design and layout which respects the character and the setting of the Conservation Area. • Archaeological investigation and appropriate mitigation measures. Although this remains uncertain as the impact on archaeology will	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			depend on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. There are also unnamed watercourses flowing through the north of the site and through the north east of the site which gives and unknown impact on flooding. Oakford has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and the unnamed watercourses, but the benefit of a bus service on balance a neutral effect is considered.	0/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A Flood Risk Assessment would be required to determine the impact of the watercourse, if any areas of flood risk were avoided a neutral effect would be considered. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service. Some uncertainty remains as the impact of the unnamed watercourse is unknown.	+1/?
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land, a slight negative effect as the site is relatively small.	-1		-1
E) Promoting economic 0growth and employment	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 5 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Oakford does not meet the criteria checklist to be designated a village in the draft Local Plan which is based on the physical characteristics of the settlement and the availability of three essential services (educational facility, convenience store and transport service), overall a slight negative effect.	-1		-1
I) Delivering the necessary infrastructure	The local highway network consists of narrow roads having restrictive alignments. A single, central access would be required in order to achieve adequate visibility however the field is considerably higher than the road and this would cause problems in obtaining access. No immediate local school, development will increase the home to school transport costs as no schools are within a safe walking distance. Area is served by Bampton School. Given that an adequate access is difficult to achieve and poor education capacity, an overall negative effect is considered.	-2	Given the difficulties in topography restricting the access capabilities of the site with little mitigation measures possible and the lack of a nearby school a negative impact remains.	-2

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Oakford. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Sampford Peverell

Policy SP1: Former Tiverton Parkway Hotel, Sampford Peverell

Land with a gross site area of 0.45 (ha) at Former Tiverton Parkway Hotel, Sampford Peverell is proposed for 10 dwellings with 30% affordable housing and a doctor's surgery.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. There is a modern housing estate to the west and low density single plot dwellings to the east. The site is on higher land than to the south east, where the landform drops away, offering wider and longer views. The landform to the south west is steeper and shields the site from views from that direction. As there may be some landscape impact although mitigation is provided by existing development a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan also provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	No designations immediately around the site, however the Sampford Peverell Conservation Area lies a little distance to the west, though this is unlikely to be affected by development on this location. No anticipated impact upon any known heritage assets, an overall neutral effect.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. Groundwater flooding maps show a 0-25% chance of groundwater emergence within the site boundary. The site could contribute to surface water run off without appropriate mitigation measures. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Sampford Peverell has access to a bus and train service which could help reduce car travel and therefore	0	Based on recommendations provided by Devon County Council, groundwater monitoring is not required for this site, provided that necessary details are submitted with a drainage strategy. The policy requires the provision of a	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	carbon emissions. Given the potential issues around flooding but the benefit of a bus and train service on balance a neutral effect is considered.		drainage strategy and sustainable urban drainage scheme to deal with all surface water from the development. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. Given the mitigation of flood risk a positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on brownfield land which is considered to be a positive impact for resource use.	+2		+2
E) Promoting economic growth and employment	Though the site is vacant, the previous use of a hotel, and consented use, of a nursing home, would involve an element of employment. If the doctor's surgery could be accommodated on-site, this would ensure the site still retained an element of employment and a slight positive effect is considered.	+1	The policy requires the provision of a doctor's surgery, a slight positive effect is considered as the site previously involved an element of employment.	+1
F) Supporting retail	No impact.	0		0
G) Meeting	Option provides for 10 new dwellings with 30% affordable housing a	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
housing needs	contribution towards future housing need, a slight positive effect.			
H) Ensuring community health and wellbeing	Sampford Peverell is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0	The policy provides for the provision of a doctor's surgery, overall a positive effect is considered.	+2
I) Delivering the necessary infrastructure	Access can be achieved and the site is a short distance from the existing bus service. The Mid Devon Community Infrastructure Evidence Report indicates that the primary school can accommodate additional pupils arising from this development without expansion. Given access to the site can be achieved and the capacity of the local schools overall a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Sampford Peverell. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Higher Town, Sampford Peverell

Option

Land with a gross site area of 6 (ha) at Higher Town, Sampford Peverell is proposed for 60 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The overall rise above Turnpike is significant and there are far-reaching views to and from the site. If suitable access could be achieved, given the steep gradients, it is likely that a substantial length of hedgerow would need to be removed. Visually the character of the area is agricultural and divorced from the village, with only a few low density detached dwellings on the opposite side of Turnpike. Given the impact on the landscape but limited mitigation provided by existing development and potential loss of a substantial length of hedgerow a negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	The site is adjacent to Sampford Peverell Conservation Area to North East. The site occupies an area enclosed in the medieval period and archaeological remains associated with the earlier field system and archaeological remnants may be affected by development here. Given the potential impact on the Conservation Area and archaeology a negative and uncertain effect is considered.	-2/?	If the following aspects are considered by development a neutral effect is considered. • Design and layout which respects the character and the setting of the Conservation Area. • Archaeological investigation and appropriate mitigation measures. Although this remains uncertain as the impact on archaeology will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without	0	A policy requirement in the Local Plan seeks mitigation measures	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
change	appropriate mitigation measures. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Sampford Peverell has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and flood risk but the benefit of a bus and train service on balance a neutral effect is considered.		through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. Given the mitigation of surface water run off and flood risk a positive effect is considered as there is the benefit of a bus and train service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 very good quality agricultural land. Given the loss of very good quality agricultural land but the relatively small site area an overall negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting	Option provides for 60 new dwellings a contribution towards future housing	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
housing needs	need, a positive effect.			
H) Ensuring community health and wellbeing	Sampford Peverell is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The roads surrounding the site have no footpaths and the Turnpike is a dangerous road for pedestrians. Within the village, pedestrian and cycle links are good, with access to the Grand Western Canal and the cycle path connecting the train station to Tiverton and Willand. Access onto Turnpike would require substantial hedgerow and earth removal and the topography of the site may make suitable access unachievable. Adequate road access is achievable to the site however access from the minor roads would require frontage improvements including the removal of substantial length of hedgerow to ensure visibility displays. There is existing capacity in the local schools to accommodate development from this individual site. Given the difficulties identified to access to the site an overall slight negative and uncertain effect is considered.	-1/?	Given the issues around access and topography for which little mitigation can be provided and the uncertainty over whether access is achievable a slight negative and uncertain effect remains.	-1/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Sampford Peverell. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land off Whitnage Road, Sampford Peverell
Option

Land with a gross site area of 6 (ha) at Land off Whitnage Road, Sampford Peverell is proposed for 60 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The canal is a Conservation Area and County Wildlife Site. The eastern part of the site falls within the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium-scale fields of permanent pasture. The western part of the site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. All parts of the site are well enclosed in the landscape, with no far-reaching views. The eastern part of the site is particularly low-lying as it leads down to the stream and canal. However as the eastern part is divorced from the settlement and could impact on the canal a negative effect overall is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation and therefore a neutral effect is considered. Further mitigation could be provided by ensuring that development is focussed on the west of the site avoiding the eastern part of the site to avoid any impact on the canal and to ensure development is not divorced from the settlement.	0
B) Protection and promotion of a quality built and historic environment	The Grand Western Canal which is a Conservation Area runs along some of the north side of the site. The site lies in an area where prehistoric activity is demonstrated by findspots of stone tools. Given the potential impact on the canal and archaeology an overall negative and uncertain effect is considered.	-2/?	If the following aspects are considered by development a neutral effect is considered. • Design and layout which respects the character and the setting of the Conservation Area. • Archaeological investigation and appropriate mitigation measures.	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			Although this remains uncertain as the impact on archaeology will depend on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. A stream follows the boundary of the fields within the site and a flood risk assessment may be required to determine any potential impact. The site could contribute to surface water run off without appropriate mitigation measures. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Sampford Peverell has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding run off but the benefit of a bus and train service on balance a neutral effect is considered. This remains uncertain as the impact of the stream is unknown.	0/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. This would include a buffer zone next to the Grand Western Canal for maintenance in the public domain. If a flood risk assessment is provided to assess the potential impact of the stream and mitigation provided or this is excluded from the site, a positive effect is considered as there is the benefit of a bus and train service.	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			Although this remains uncertain as the impact of the stream is unknown.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. There is a 0.2 ha (3% middle of east field) classified as contaminated land due to quarrying. The site is located on Grade 3 good / moderate quality agricultural land. Given the loss of good / moderate quality agricultural land and the contaminated land overall a significant negative effect is considered.	-3	If a site contamination assessment and remediation is undertaken some mitigation will be provided. The site is relatively small but is on Grade 3 agricultural land therefore a slight negative effect is considered.	-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 60 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Sampford Peverell is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect. The site is located adjacent to the A361 and could be subject to traffic noise, a slight negative effect.	-1		-1
I) Delivering the necessary infrastructure	Adequate road access is achievable but Whitnage Road would require widening over the site frontages. Within the village, pedestrian and cycle links are good, with access to the Grand Western Canal and the cycle path connecting the train station to Tiverton and Willand. There is existing	-1	If road widening over the site frontages is provided a neutral effect is considered.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	capacity in the local schools to accommodate development from this individual site. Given an adequate site access is achievable but would require widening over the site frontages a slight negative effect is considered.			

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Sampford Peverell. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land at Mountain Oak Farm, Sampford Peverell

Option

Land with a gross site area of 9 (ha) at Land at Mountain Oak Farm, Sampford Peverell is proposed for 216 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Site runs up to edge of Grand Western Canal Country Park and Local Nature Reserve. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is separated from the village and therefore little mitigation is provided by existing development. A significant negative effect is considered overall as the development could impact on the canal and there could be a negative impact on landscape given the	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment, however a slight negative effect is still	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	number of dwellings proposed and the lack of existing development to provide significant mitigation.		considered given the divorced nature of the site from the settlement and the potential landscape impact.	
B) Protection and promotion of a quality built and historic environment	This site occupies a substantial area in a landscape where prehistoric activity is recorded in the wider landscape. Development would impact upon the Canal Conservation Area if the whole site was developed, overall a negative and uncertain effect.	-2/?	If the following aspects are considered by development a neutral effect is considered. • Design and layout which respects the character and the setting of the Conservation Area. • Archaeological investigation and appropriate mitigation measures. Although this remains uncertain as the impact on the archaeology will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. The site contains a pond and a number of streams which follow the field boundaries within the site, and a flood risk assessment may be required to determine any potential impact. The site could contribute to surface water run off without appropriate mitigation measures. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Sampford Peverell has access to a bus and	0/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Appropriate	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus and train service on balance a neutral effect is considered. This remains uncertain as the impact of the stream is unknown.		mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. A buffer zone will be required adjacent to the Grand Western Canal to allow access for maintenance which should be within public open space and not within private gardens. If a flood risk assessment is undertaken to determine potential impacts of the pond and steams and mitigation is provided overall positive effect is considered as there is the benefit of the bus and train service. Although this remains uncertain as the impact of the pond and streams is unknown.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. There is a 0.9 ha classified as contaminated land due to quarrying. The site is located on Grade 3 good / moderate quality agricultural land. Given the loss of good / moderate quality agricultural land, potential issues around contaminated land and Grade 3 agricultural land an overall significant negative effect is considered.	-3	If a site contamination assessment and remediation is undertaken some mitigation will be provided. The site is relatively small but is on Grade 3 agricultural land therefore	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			a slight negative effect is considered.	
E) Promoting economic growth and employment	There may be a slight positive impact for local construction firms and associated trades who would be able to undertaken contract work.	+1		+1
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 216 new dwellings a contribution towards future housing need, a significant positive effect. This level of housing provision could be out of scale with the settlement size of Sampford Peverell and may need to be reduced to reflect the housing demand and need within the village.	+3		+3
H) Ensuring community health and wellbeing	Sampford Peverell is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. However given the scale of development this may impact on existing services and facilities, therefore a slight negative effect is considered.	-1		-1
I) Delivering the necessary infrastructure	The site could be accessed from Lower Town to the north of the link to the station, as the verge is again maintained in the verge schedules but not shown on Land charges plans, the existing access is suitable for a share surfaced cul-de-sac serving a maximum of 25 dwellings. The overall yield figure will be based upon what access can be formed to the east and a secondary access provided further to the west and an emergency access through the existing access. The site access is of limited width but would be acceptable as a shared surface serving a limited development. Visibility at the site access is inadequate for a 40 mph speed limit but the 30 mph limit	-2/?	If access is achievable a neutral effect is considered. An uncertain effect is still considered as the yield is dependent on what access can be formed. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	would need to be extended. Street lighting would need to be provided on the C105. There are good links to Tiverton, the outlying villages, the train station and the canal, with a public footpath adjacent to the site, running along Grand Western Canal. Sampford Peverell Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Cullompton Community College however does have capacity to meet the requirements of this individual allocation. Given that access can be achieved but the overall yield is dependent on what access can be formed and issues around educational capacity an overall negative and uncertain effect is considered.		and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. Overall a neutral and uncertain effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Sampford Peverell. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Morrells Farm, Sampford Peverell

Option

Land with a gross site area of 30.9 (ha) at Morrells Farm, Sampford Peverell is proposed for a use of either 742 dwellings, 64,890 sqm commercial floor space or a mixed (and hence proportionately reduced) use of both.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is not elevated or particularly prominent, but development of this large area outside of the village would significantly change the character of Sampford Peverell and its wider environment, a negative effect.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation which will reduce the impact to a slight negative effect however as the site is so large, a wider landscape assessment would be needed if taken forward, as the landscape impact would vary across the site. Further mitigation could be provided by reducing the scale of the development, however it is likely that some impact will remain given the divorced nature of the site from the settlement.	-1
B) Protection and promotion of a quality built and historic environment	This site occupies a substantial area in a landscape where prehistoric activity is recorded in the wider landscape. The separation of the site from the main element of the village raises concerns about how well the final design could integrate the existing and the proposed development, overall a negative and uncertain effect.	-2	If archaeological investigation and mitigation is undertaken this would provide some mitigation. Although this remains uncertain as the impact will depend on the results of the investigation would still remain. Design or an appropriate masterplanning process could help provide some mitigation in integrating the development with the existing settlement however	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			due to the divorced nature of the site with the main settlement a slight negative effect w	
C) Mitigating the effects of climate change	The majority of the site is located in flood zone 1 the lowest level of flood risk. The eastern edge of the site falls within flood zone 2 and 3. The site could contribute to surface water run off without appropriate mitigation measures. There are a number of unnamed streams and the Spratford Stream which have a potential to cause flood risk, therefore the flood risk from these streams are unknown. Sampford Peverell has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus and train service on balance a neutral effect is considered.	0/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. If development avoided areas in flood zone 2 and 3 a positive effect is considered given the benefit of the bus and train service. The flood risk impact from the unnamed watercourses through the site is unknown.	+2/?
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on mainly Grade 3 good / moderate & some Grade 4 poor quality agricultural land in the eastern corner. Given the loss of good / moderate / poor quality agricultural land and the large scale of the site an overall negative effect is considered.	-2		-2
E) Promoting economic growth and	Option provides 64,890 sqm of commercial floorspace helping to diversify the economy, provide opportunities for local employees, reduce out-commuting and encourage inward investment, a positive effect.	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
employment	Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact. Even if a lesser amount were allocated, the site still has the potential to meet a significant amount of the district's employment needs a significant positive effect.			
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 742 new dwellings a contribution towards future housing need, a significant positive effect. This level of housing provision could be out of scale with the settlement size of Sampford Peverell and may need to be reduced to reflect the housing demand and need within the village. It is possible the quantity of housing could be reduced in order to see some commercial development on the site. Even if this is done, this is a large enough site to provide a significant amount of the district's housing needs.	+3		+3
H) Ensuring community health and wellbeing	Sampford Peverell is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The site is divorced from the settlement which may affect community cohesion, the scale of the development may also impact community facilities and therefore a negative effect is considered.	-2	A smaller development size less than 100 dwellings would provide some mitigation however a slight negative impact would remain as the site is divorced from the settlement.	-1
I) Delivering the necessary infrastructure	Adequate accesses are achievable. Street lighting on existing roads would be required and the 30 mph speed limit would need to be extended. There is good access as the site is in relatively close proximity to Sampford Peverell, there is access to the train station, canal and a cycle path. Sampford Peverell Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Cullompton Community College however does have	-2	If the road infrastructure required is provided for this would mitigate any impact on road infrastructure and access. A transport assessment may also be required to help mitigate any impact and therefore	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	capacity to meet the requirements of this individual allocation. The site may need to deliver a large amount of road infrastructure. Given the capacity limitations at the local school, and the level of road infrastructure required, a negative score is considered.		an uncertain effect is assumed given the reliance on further information. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the school to expand within the current site. Overall a neutral and uncertain effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Sampford Peverell. A large site like this will take many years to be built out, and is likely to have an impact in the medium to long-term. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing and employment needs.

Morrells Farm adjacent the main road, Sampford Peverell Option

Land with a gross site area of 3 (ha) at Morrells Farm adjacent the main road, Sampford Peverell is proposed for 56 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is low-lying in the landscape, with no far-reaching views. Development would have a minimal landscape visual impact, a neutral effect. There is a network of hedges throughout the site, as well as a number of trees. The stream to the east may also act as a habitat. The barns adjacent to Chains Road may also act as a habitat for protected species, such as barn owls, which would be affected if demolition of the buildings was required. Given the potential impact on the wildlife a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation a neutral effect is therefore considered.	0
B) Protection and promotion of a quality built and historic environment	Two grade II listed buildings sit adjacent to the site, the Merriemead Hotel and the Morrells Farmhouse (3 Lower Town). The Sampford Peverell Conservation Area lies immediately adjacent to the north, and cuts across the eastern part of the site. It is considered likely that this development will have an impact on the grade II farmhouse which would have a detrimental impact on the significance character and appearance of the Conservation Area, particularly as the proposed access point requires the demolition of a stone frontage wall and a group of traditional farm buildings (all within the Conservation Area) a negative effect overall.	-2	Design and layout which respects the character and the setting of the Conservation Area and listed buildings would provide some mitigation, however given that access to the site would require the demolition of a stone frontage wall and a group of traditional farm buildings (all within the Conservation Area) a negative effect still remains.	-2
C) Mitigating	An ordinary watercourse is within the site /on the site boundary. The site is	-1/?	A policy requirement in the Local	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
the effects of climate change	located mostly in flood zone 1, although 0.67ha along the eastern boundary is within flood zones 2 and 3 (where a stream runs parallel to the public right of way). Sampford Peverell has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus and train service on balance a slight negative effect is considered. This remains uncertain as the impact of the stream is unknown.		Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. If development avoided flood zone 3 and a flood risk assessment is undertaken in consultation with Devon County Council to determine the impact of the watercourse within the site this would provide further mitigation and positive effect is considered given the benefit of a bus and train service. Although this remains uncertain as the impact of the watercourse is unknown.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good to medium quality agricultural land, as the site is relatively small a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 56 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Sampford Peverell is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect. Development of the site may require some loss of part of the adjacent pub beer garden which serves as a play area and recreational space, a slight negative effect given the loss of this undesignated recreational open space.	-1	The provision of or relocation of the loss of recreational space would mitigate any impact and therefore a neutral effect is considered.	0
I) Delivering the necessary infrastructure	Provision of suitable access to site may necessitate the demolition of the farm buildings and suitable footway/ cycleway/ secondary access provision to the east should be provided. A transport assessment will be necessary and should include impact on Halberton traffic calming. There is existing capacity in the local schools to accommodate development from this individual site. Given the difficulties identified to access to the site and the need for a transport assessment a slight negative and uncertain effect is considered.	-1/?	If provision of a suitable access and mitigation for the impact on Halberton is provided for a neutral effect is considered. The impact however remains uncertain as the impact on Halberton traffic and mitigation required is dependent on a transport assessment, overall a neutral and uncertain effect is considered.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Sampford Peverell. Once completed the development will be permanent.

Spatial extent: (District wide / local)	This site option will help meet housing needs.

Sandford

Policy SA1: Fanny's Lane, Sandford

Land with a gross site area of 1.5 (ha) at Fanny's Lane, Sandford is proposed for 27 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. However, development of this site would have a minimal impact on the character of the landscape as it is contained by development and man-made interventions, a neutral effect.	0		0
B) Protection and promotion of a quality built and historic environment	The western boundary of the site abuts the curtilage of a listed building. The western part of the site also falls within Sandford Conservation Area and will impact views towards Sandford and the historic core around St Swithun's Church, overall a negative effect is considered.	-2	The policy requires a buffer strip of planting or open space to protect the setting of the listed Park House and Sandford Conservation area. It also requires careful design and landscaping to protect views towards Sandford and historic core around St Swithun's Church, therefore a neutral effect is considered.	0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Sandford has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service	0	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Given the	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	on balance a neutral effect is considered.		mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land, Grade 2 very good quality agricultural land. Given the relatively small scale of the site, a negative impact is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 27 new dwellings with 30% affordable housing, a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Sandford is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Can be accessed off the new road into the estate recently granted planning permission. The Mid Devon Community Infrastructure Evidence Report indicates that primary and secondary school pupils can be accommodated without expansion. Overall neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	No anticipated impact.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Sandford. Once completed the development will be permanent.

	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land at Sandford (West), Sandford
Option

Land with a gross site area of 1.5 (ha) at Land at Sandford (West), Sandford is proposed for 48 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The elevated position of the site means that any development here would be prominent within the local landscape. Some parts of the field are very elevated and offer panoramic views of the surrounding countryside. The main body of the village, though on rising land, is partly enclosed within a fold in the landscape. Development of this site would extend the village beyond that which could be contained within the landscape, therefore existing development provides little mitigation and would likely have a large impact as a result. Overall a negative impact is considered given the large landscape impact.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation. A slight negative effect remains given the prominent position of the site and potential impact on the landscape.	-1
B) Protection and promotion of a quality built and historic environment	The Sandford Conservation Area and a number of listed buildings lie a short distance to the south of the site (though not directly adjoining). The site lies in an area where no formal archaeological work has been undertaken, but in a prominent position within a landscape where prehistoric activity is recorded in the Historic Environment Record, overall a negative and uncertain effect.	-1/?	If archaeological investigation and mitigation is undertaken this would provide some mitigation. Although this remains uncertain as the impact will depend on the results of the investigation. Development should also consider the impact on	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			the setting of the Conservation Area and any listed buildings, overall a neutral effect is considered.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. Groundwater flooding maps show a 25-50% chance of groundwater emergence within the site boundary. The site could contribute to surface water run off without appropriate mitigation measures. Sandford has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and groundwater flooding but the benefit of a bus service on balance a slight negative effect is considered.	-1	Any development should undertake a drainage strategy to determine the impact of the groundwater flooding. A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land which is considered to be negative impact on resource use. The site is located on Grade 2 very good quality agricultural land, as the site is relatively small a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	Option provides for 48 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Sandford is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The site lies to the north of village and can technically be accessed from Signpost Lane although this would require considerable earth moving as site lies approximately 2.0m above road. The site would also require road widening to accommodate footpath provision, given the road conflict with pedestrians the site is considered only suitable for a small cul-de sac as the only single point of access around the school. There is existing capacity in the local schools to accommodate development from this individual site. Given that access is achievable but would require considerable earth moving and the conflict with pedestrians a slight negative effect is considered.	-1	A smaller development would help mitigate any impact of traffic in conflict with pedestrians however as it would require considerable earth moving this may not be viable for a small development therefore a uncertain effect remains. Overall a neutral and uncertain effect is considered.	0/?

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Sandford. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Shillingford

Land off Bowdens Lane, Shillingford

Option

Land with a gross site area of 1.6 (ha) at Land off Bowdens Lane, Shillingford is proposed for 51 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site would be visible from the hill ridge to the west, south and north east. The existing housing would provide some level of mitigation against any landscape impact that would arise. Given the relatively small scale of the site a neutral effect is considered.	0		0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Shillingford has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land, as the site is relatively small a slight negative impact is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 51 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Shillingford does not meet the criteria checklist to be designated a village in the draft Local Plan which is based on the physical characteristics of the settlement and the availability of three essential services (educational facility, convenience store and transport service), overall a slight negative effect.	-1		-1
I) Delivering the necessary infrastructure	An adequate access is achievable from Bowdens Lane. No immediate local school, development will increase the home to school transport costs as no schools are within a safe walking distance. Area is served by Bampton School. Given an adequate site access is achievable but there are issues around education transport an overall slight negative effect is considered	-1	As there is no school in Shillingford a slight negative effect remains.	-1

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the

	local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Shillingford. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Silverton

Policy SI1: Land at Old Butterleigh Road, Silverton

Land with a gross site area of 0.35 (ha) at Land at Old Butterleigh Road is proposed for 8 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Upper farmed and wooded valley slopes' landscape character area. This site is currently use for agricultural purposes and is largely flat. As the site is well contained and landscape impacts are unlikely a neutral effect is considered.	0		0
B) Protection and promotion of a quality built and historic environment	The site is adjacent to the Silverton Conservation Area, a slight negative effect.	-1	The policy requires design and layout to respect the character of the Conservation Area, a neutral effect overall.	0
C) Mitigating the effects of climate change	A river runs to the eastern side of the site, and a small proportion of the eastern field falls within the flood zones 2 and 3. The remaining area of the site is located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures, overall a negative effect. Silverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on	-1	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. The policy also requires no development on the floodplain to the east of the site.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	balance a slight negative effect is considered.		Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The majority of the site is on Grade 3 good /moderate agricultural land. The southern section of the site is located on Grade 2 very good quality agricultural land. Overall a negative effect is considered given the inclusion of grade 2 agricultural land within the site.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 8 new dwellings with 30% affordable housing a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Silverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	An adequate access to both sites is achievable however the highway would require widening across the site frontages and frontage footways would need to be provided, a slight negative effect. The Mid Devon Community Infrastructure Evidence Report indicates that as the level of development is small it is anticipated that the local schools will be able to accommodate the small number of pupils likely to be generated by this development with appropriate contributions from developers. Given an adequate site access is achievable but would require widening and the need for developer contributions to accommodate the number of pupils generated a negative is	-2	The policy requires widening of carriageway over site frontage and provision of grass verge. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	considered.		and facilities. Overall a neutral effect.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Silverton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Livinghayes Road, Silverton

Land with a gross site area of 0.5 (ha) at Livinghayes Road, Silverton is proposed for 8 dwellings with 30% affordable housing. Following the Local Plan Review Options Consultation 2014 the site area was redrawn to be reconsidered by the SHLAA panel. The appraisal below refers to the amended site area.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium-scale fields of permanent pasture. As the site is well contained and landscape impacts are unlikely a neutral effect is considered.	0		0
B) Protection and promotion of	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
a quality built and historic environment				
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures. Heal-eye stream flows along the east boundary of the site, the impact of which is not yet known. Silverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off and flooding but the benefit of a bus service on balance a slight negative effect is considered.	-1/?	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. A Flood Risk Assessment would be required to determine the impact of the Hele-eye stream. If development avoided areas of flood risk this would mitigate any impact. Given the mitigation of surface water run off and flooding a slight positive effect is considered as there is the benefit of a bus service. Uncertainty remains as the impact of the unnamed watercourse is not yet known.	+1/?
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land. Given the loss of good /moderate quality agricultural land but the small size of the site an overall slight negative effect is considered.	-1		-1
E) Promoting	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
economic growth and employment				
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 8 new dwellings with 30% affordable housing a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Silverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Access to Livinghayes Road site is limited as the site is located off a private road which is narrow and doesn't have footways. Refuse lorries do not currently use the lane, which is developed would result in an unacceptable arrangement for future resident who would need to deposit their refuse on collection says at the junction with Coach Road. The Mid Devon Community Infrastructure Evidence Report indicates that as the level of development is small it is anticipated that the local schools will be able to accommodate the small number of pupils likely to be generated by this development with appropriate contributions from developers. Given access difficulties and the need for development contributions for the number of pupils generated a significant negative effect is considered.	-3	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities which will help provide for the number of pupils generated by the development. However a negative effect remains due to the access difficulties of the site.	-2

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years),	Within the short term, construction traffic associated with the development will

Medium (6-15 years) Long (15+ years)	increase traffic within Silverton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Glebe, Silverton
Option

Land with a gross site area of 1.08 (ha) at Glebe, Silverton is proposed for 35 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium-scale fields of permanent pasture. The site is largely flat, but does offer some views to the south, which will be impacted, although the site will be partly shielded by the hedges and trees. Views from the north are limited to the buildings immediately adjacent. Given the relatively small scale of the site and existing development providing some mitigation a neutral effect is considered.	0		0
B) Protection and promotion of a quality built and historic environment	The proposed development site lies on the edge of the historic core of the village and in an area where the mid-19th century Tithe Map shows a concentration of buildings that have largely disappeared by the late 19th century. The site is adjacent to the Silverton Conservation Area, overall a negative and uncertain effect is considered.	-2/?	Archaeological investigation and mitigation, and design which respects the Conservation Area and its setting will minimise any impact and therefore a neutral effect is considered. Although this remains uncertain as the impact on archaeology will depend on the results of the investigation	0/?
C) Mitigating	The site is located in flood zone 1 the lowest level of flood risk, a neutral	-1/?	A policy requirement in the Local	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
the effects of climate change	effect. The site could contribute to surface water run off without appropriate mitigation measures. There is also an unnamed watercourse to the south west of the site, the impact of which is not yet known. Silverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and flooding but the benefit of a bus service on balance a slight negative effect and uncertain is considered.		Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A Flood Risk Assessment would be required to determine the impact of the unnamed watercourses. If development avoided areas of flood risk this would mitigate any impact. Given the mitigation of surface water run off and flooding a slight positive effect is considered as there is the benefit of a bus service. Uncertainty remains as the impact of the unnamed watercourse is not yet known.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. 0.162 ha (15% South) of the site is located on Grade 1 excellent quality agricultural land, 0.03 ha (3% South) is located on Grade 2 very good quality agricultural land and 0.86 ha (81% north) is located on Grade 3 good / moderate agricultural land. Given the relatively small size of the site but the loss of excellent / very good / good /moderate quality agricultural land an overall negative effect is	-2		-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	considered.			
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 35 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Silverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	An adequate access is achievable from the unclassified road fronting the north west of the site. The unclassified road fronting the north east of the site is subject only to the national speed limit and the provision of adequate visibility would be likely to be problematic. Silverton Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Given an adequate site access is achievable but visibility would be problematic and the potential issues around education capacity an overall negative effect is considered.	-2	If adequate visibility is provided this would mitigate access issues however an uncertain effect remains as this may be problematic**.** Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the current overcapacity of the school and the scale of the development proposed. If mitigation is provided	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			a neutral effect is considered however this remains uncertain.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Silverton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

The Garage, Silverton

Option

Land with a gross site area of 0.11 (ha) at The Garage, Silverton is proposed for 5 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'River valley slopes and coombes' landscape character area. This area typically falls within the River Exe valley and often has steep, wooded sides and a strong sense of enclosure within a lush valley landscape. The site is shielded by high hedges and trees along the lane, and with few opportunities for views into and out of the site. However as development may result in the loss of the high hedges and trees which shield the site a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation therefore a neutral effect is considered.	0
B) Protection and	The site is within the Silverton Conservation Area yet is divorced from the main body of the village, overall a negative effect is considered.	-2	Design which respects the Conservation Area and its setting	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
promotion of a quality built and historic environment			would mitigate any impact on the Conservation Area, however a slight negative effect remains as the site is divorced from the main body of the village.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Silverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	The site is located on brownfield land, a positive effect.	+2		+2
E) Promoting economic growth and employment	Planning permission from 1983 is for storage, parking and maintenance. There will be a loss of some employment land if this site is developed for housing, a negative effect.	-2	The relocation of the employment element or provision of employment onsite would mitigate any impact. This would result in a neutral effect.	0
F) Supporting retail	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	Option provides for 5 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Silverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. There is no footpath between the site and the village which would result in increased conflict between pedestrians and vehicles giving rise to safety concerns, overall a slight negative effect.	-1	If a footpath was provided this could provide mitigation and would result in a neutral effect.	0
I) Delivering the necessary infrastructure	Access from Newcourt Road where an adequate site access is achievable if located to maximise visibility. Silverton Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Given an adequate site access is achievable but potential educational impact a slight negative effect is considered.	-1	Access to be provided at Newcourt Road, a neutral effect. Mid Devon Community Infrastructure Evidence Report indicates that it is considered that two sites of 8 dwellings can be accommodated with appropriate contributions from developers therefore it is considered that this site as an individual smaller site could be accommodated. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities. Overall a neutral effect.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact

	upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Silverton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

East of Hederman Close, Silverton

Option

Land with a gross site area of 1.86 (ha) at East of Hederman Close, Silverton is proposed for 60 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Upper farmed and wooded valley slopes' landscape character area. These areas are typified by having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium scale fields of permanent pasture. The site can be viewed from the wooded hillside to the south west, but it appears an inaccessible viewpoint. Views to the north are shielded by elevated fields. The housing along the western boundary is visible from the east and would provide a level of mitigation, overall a neutral effect.	0		0
B) Protection and promotion of a quality built and historic environment	This site lies within a landscape where there is a concentration of prehistoric activity. While no sites are recorded within the area under consideration it is possible that evidence of prehistoric activity may be present here, a slight negative effect.	-1	If archaeological investigation and mitigation is undertaken a neutral effect is considered.	0
C) Mitigating the effects of climate	The site is located in flood zone 1 the lowest level of flood risk. The Heal-eye Stream runs along the western boundary of the site, and a flood risk assessment would need to be required to determine any potential impacts	-1/?	A policy requirement in the Local Plan seeks mitigation measures	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
change	of developing the site. The site could contribute to surface water run off without appropriate mitigation measures. Silverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered. This remains uncertain as the impact of the stream is unknown.		through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. If a flood risk assessment is also undertaken to determine the impact of the Heal-eye Stream a slight positive effect is considered given the benefit of a bus service. Although an uncertain effect remains as the impact of the Heal-eye Stream is unknown.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. 0.82ha (south east) is located on Grade 1 Excellent quality agricultural land, 0.04ha (north east) Grade 2 very good quality agricultural land and 1 ha (west) Grade 3 good / moderate quality agricultural land. Given the loss of Excellent / very good /good / moderate quality agricultural land but the small size of the site an overall negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 60 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community	Silverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	level of development, a neutral effect.			
I) Delivering the necessary infrastructure	A suitable junction can be formed to the site however there is a need to widen the road C811 (road along northern boundary) at the point of access. An adequate footway network back to village centre is also required. Silverton Primary School only has limited capacity and would not have enough capacity to accommodate the number of pupils arising from this individual allocation. Given an adequate site access is achievable but works will need to be made to provide access and issues around education capacity negative effect is considered.	-2	Widening of the road C811 along the northern boundary would mitigate any issues around access. Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities although the impact remains uncertain given the current overcapacity of the school and the scale of the development proposed. If mitigation is provided a neutral effect is considered however this remains uncertain.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Silverton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Thorverton

Policy TH1: South of Broadlands, Thorverton

Land with a gross site area of 0.7 (ha) at South of Broadlands, Thorverton is proposed for 12 dwellings with 30% affordable housing. This site was previously named 'Thorverton Glebe and Paddocks' in the SHLAA Report, and is now only the eastern portion.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is partially screened by the topography of the land adjacent to the east, known as Peter's Hill. There are distant views of the site from the west, but this could be limited through the use of screening. The site itself is fairly level and there would be limited visual impact on the character of Thorverton. As there are distant views of the site from the west a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation and a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	This site lies just to the north of a large probably prehistoric enclosure site, a slight negative and uncertain effect.	-1/?	The policy requires archaeological investigation and appropriate mitigation, overall a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	Part of the site (south eastern) is within Zone 3 Source Protection Zone. The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. The site has been considerably reduced since the options consultation and now covers only the area on the western side of the road. Part of the updated site area remains within the Source Protection Zone. Thorverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is	-1	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. As the site is within a Source Protection Zone, appropriate forms of sustainable urban drainage should be used, overall a neutral effect.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	considered.			
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 1 excellent quality agricultural land. As the site is small scale but is on excellent quality agricultural land a negative impact is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 12 new dwellings with 30% affordable a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Thorverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0	The policy requires road widening and provision of a footpath along the site frontage which in this case will be beneficial for the wider community as well as the development, overall a slight positive effect is considered.	+1
I) Delivering the necessary infrastructure	Access is achievable but would require road widening and footway link. The Mid Devon Community Infrastructure Evidence Report indicates that the local secondary school has capacity however Thorverton primary school is at overcapacity. The school is popular and has historically admitted pupils from outside its catchment area. Despite the forecast showing the school to be overcapacity, it is likely that children within the small development will be able to secure a place at the school but developer contributions will be required. Given the need for road widening and footway link and the	-2	The policy requires road widening and provision of footpath along site frontage extending northwards to connect with the existing network at the entrance to the Broadlands estate. Policy S8	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	requirement for developer contributions a negative effect is considered.		provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities. Overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Thorverton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Uffculme

Land adjoining Poynings, Uffculme

Option

Land with a gross site area of 2.8 (ha) at Land adjoining Poynings, Uffculme is proposed for 35 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are a number of mature trees on the site which should be retained. This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. There are views	-3	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	of the site from the east, and the landscape is punctuated by mature trees. Developing the site would impact on the landscape character of the area, particularly given its position on elevated land and distinct rural character. Existing development provides limited mitigation. Therefore given the potentially large landscape impact and loss of mature trees a significant negative effect is considered.		the impact on the landscape and the natural environment. However given the prominent position of the site a slight negative effect is likely to remain.	
B) Protection and promotion of a quality built and historic environment	Site is located close to Uffculme Conservation Area (to the south east), a slight negative effect.	-1	Design which respects the Conservation Area and its setting will mitigate any impact, a neutral effect.	0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Uffculme has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	The site adjoins, but is not within a Minerals Consultation Zone. Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land. Given the loss of good / moderate quality agricultural land but the relatively small scale of the site an overall slight negative effect is considered.	-1		-1
E) Promoting economic	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
growth and employment				
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 35 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Uffculme is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	An adequate site access is achievable as access to the site is good, with good visibility, although it is located on a bend and just before the 30mph two lane road into the village. Chapel Hill which provides the route to the centre of Uffculme is narrow and lacks footways. There is an alternative pedestrian route, via Uffculme Footpath 46 and highland terrace, but this is a longer route. There is existing capacity in the local schools to accommodate development from this individual site. Given an adequate site access is achievable and educational capacity a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Uffculme. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land adjacent Sunnydene, Uffculme

Option

Land with a gross site area of 0.6 (ha) at Land adjacent Sunnydene, Uffculme is proposed for 10 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The site is slightly elevated but would not be overly dominant in the village context as neighbouring properties are set back from the site. Given the small scale of the site and the mitigation provided by neighbouring development a neutral effect is considered.	0		0
B) Protection and promotion of a quality built and historic environment	The site is located adjacent to the Uffculme Conservation Area, which is to the south east of the site, a slight negative effect.	-1	Design which respects the Conservation Area and its setting will mitigate any impact, a neutral effect.	0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Uffculme has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land, a slight negative effect as the site is relatively small.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 10 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Uffculme is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect. If access was to be provided on the western edge of the site this would impact on the allotments, a slight negative effect overall.	-1	The impact on the allotments is dependent on whether or not the access would be required on the western edge of the site, therefore an uncertain effect is considered.	?
I) Delivering the necessary infrastructure	There is poor access to the site being located on a bend of a very narrow lane and Uffculme Road is subject to the national speed limit. If alternative access were required on the western edge of the site, development would impact on the adjacent allotments. There is existing capacity in the local schools to accommodate development from this individual site. As van adequate site access is difficult to achieve an overall slight negative effect is considered.	-1	However as there is poor access located on the bend of a very narrow lane and Uffculme Road is subject to the national speed limit and if access were required on the western edge this would impact on the adjacent allotments a slight negative impact will remain.	-1

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Uffculme. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land off Chapel Hill, Uffculme

Option

Land with a gross site area of 2 (ha) at Land off Chapel Hill, Uffculme is proposed for 64 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The village of Uffculme is surrounded by hills on all sides, and the site would be visible from a number of the surrounding ridgelines. Hedges to the east and north of the site provide some screening; views into the site are predominantly from the south. The site is surrounded by existing development therefore landscape impact will be limited. A slight negative effect overall is considered given the potential loss of hedgerows which currently screen the site to the north and east.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic	It is not anticipated that the development of this area will have an archaeological impact. The site lies on the northern edge of the Uffculme Conservation Area and in close proximity to two listed buildings – The Mount and the Baptist Chapel, negative effect overall.	-2	Good design which respects the Conservation Area and listed buildings and their settings would mitigate any impact, a neutral effect.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment				
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Uffculme has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land; given the relatively small size of the site a slight negative impact is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 64 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Uffculme is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
I) Delivering the necessary infrastructure	Adequate access can be achieved off Chapel Hill but there will need to be a suitable pedestrian footway over the frontage. Preference is for access to be taken from Highland Terrace but would require third party land. Level differences may constrain opportunities to access the site and the junctions at either end of Chapel Hill with High Street and with B3181 give cause for concerns and have limited opportunities for improvement, a slight negative effect. There is existing capacity in the local schools to accommodate development from this individual site. Given the difficulties with access a slight negative effect is considered.	-1	If adequate access is provided off Chapel Hill and a suitable pedestrian footway is provided for a neutral effect is considered. However given the concerns the junctions with limited opportunities for improvement, overall a neutral and uncertain effect is considered.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Uffculme. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land off Ashley Close, Uffculme

Option

Land with a gross site area of 1.18 (ha) at Land off Ashley Close, Uffculme is proposed for 20 dwellings. For reference this site was named ‘Pinksborough Close’ in the 2013 SHLAA Report.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The site is steeply sloping and is visible within the wider landscape, however existing development will provide some mitigation a slight negative effect overall.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Uffculme has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	Within Hillhead Quarry mineral safeguarding area. Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land. As the site is relatively small but is within the Hillhead Quarry Safeguarding Zone and on Grade 3 agricultural land an overall negative effect is considered.	-2	Development will need to comply with policies in the Devon Minerals Local Plan, this will mitigate some impact however as the site is on Grade 3 agricultural land a slight negative effect remains. There is also some uncertainty as the	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			impact of development on the minerals safeguarding area at this stage is unknown.	
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 20 new dwellings a contribution towards future housing need, a slight positive effect.	+2		+2
H) Ensuring community health and wellbeing	Uffculme is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Access may be possible through Bellevue to the south although access would have to be via third party land which is currently subject to a planning application. There is existing capacity in the local schools to accommodate development from this individual site. Given an adequate site access is achievable but requires third party land an overall slight negative effect and uncertain effect is considered.	-1/?	If access is achieved a neutral effect is considered however this remains uncertain and it requires third party land.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Uffculme. Once completed the development will be permanent.

Spatial extent: (District wide / local)	This site option will help meet housing needs.

Hill Head Quarry, Uffculme (commercial)

Option

Land with a gross site area of 7.9 (ha) at Hill Head Quarry, Uffculme is proposed for 31,600 sqm of B2 commercial floorspace.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The site lies some 500m from Uffculme and therefore does not benefit from the backdrop of development to provide mitigation over landscape impact, a slight negative effect. It is also adjacent to a small area of unconfirmed wildlife interest, overall a negative and uncertain effect.	-2/?	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation therefore a neutral effect is considered, although this remains uncertain the area of wildlife interest in unconfirmed.	0/?
B) Protection and promotion of a quality built and historic environment	There is a listed building to the south west of the site, however it is not adjoining. It is unlikely that the listed building will be significantly affected by the site, overall a neutral effect. The site is within an area where prehistoric activity is recorded. Any undisturbed areas of this site have the potential to contain archaeological or artefactual deposits. The site is also considerably divorced from the settlement. Overall a negative and uncertain effect is considered.	-2/?	If archaeological investigation and mitigation is undertaken this would improve the impact score although this remains uncertain as the impact will depend on the results of the investigation. However a slight negative effect remains given the location of the site which is considerably divorced from the settlement.	-1/?
C) Mitigating the effects of	The site is located in flood zone 1 the lowest level of flood risk a neutral effect. The site could contribute to surface water run off without	-3	A policy requirement in the Local Plan seeks mitigation measures	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
climate change	appropriate mitigation measures. Groundwater flooding maps show a 50-75% chance of groundwater emergence within the site boundary. Uffculme has access to a bus service which could help reduce car travel and therefore carbon emissions, however this benefit is limited as the site falls outside of the settlement boundary approximately 500m away with no pedestrian or cycle links. Given the potential issues around flooding, surface water run off and the limited benefit of a bus service on balance a significant negative effect is considered.		through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Any development should undertake a drainage strategy to mitigate the impact of the groundwater flooding. Given the mitigation of flooding and surface water run off but the limited benefit of a bus service a slight negative effect remains.	
D) Safeguarding and minimising resource use	The site lies within an area with planning permission for mineral working, and within the Hillhead Mineral Consultation Area. The site still has a potential mineral reserve – unless it can be demonstrated that this is not viable to extract. Devon County Council object to sterilisation of the reserve which would be contrary to Policy MP13 of the Minerals Local Plan. The site is located on Grade 3 good / moderate quality agricultural land. As the site is relatively small but is within the Hillhead Quarry Safeguarding Zone, still has potential mineral reserve and on Grade 3 agricultural land an overall significant negative effect is considered although this remains uncertain as there is potential that the site is unviable to extract.	-3/?	As development of this site would be contrary to Policy MP13 of the Minerals Local Plan and the site is Grade 3 agricultural land, no mitigation can be provided at this stage unless it can be demonstrated that the site in unviable to extract, as this is unknown a significant negative and uncertain effect is still considered.	-3/?
E) Promoting economic growth and employment	The site provides for 31,600 sqm of commercial floorspace a significant positive impact.	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	+2		+2
H) Ensuring community health and wellbeing	Uffculme is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect. However given the location of the development approximately 500m away from the settlement edge, a slight negative effect is considered.	-1		-1
I) Delivering the necessary infrastructure	The roads serving the land are generally 5m in width and may require widening to meet current standards nominally 6.0 -7.3m carriageway width to cater for the potential increase in HGV traffic generated by general use class allocation. Any application should be supported by a Full Transport assessment and travel plan. Any proposal will need to consider impacts at its junctions with A38, waterloo cross junction 27 of the M5. There are no pedestrian and cycle links. Overall a negative and uncertain effect is considered.	-2/?	If the transport assessment and travel plan show that this development is acceptable then a neutral effect is considered however this remains uncertain as at this stage this is unknown.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Uffculme. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet employment needs.

Land west of Uffculme, Uffculme
Option

Land with a gross site area of 2.3 (ha) at Uffculme is proposed for 32 dwellings. Following the Local Plan Review Options Consultation 2014 the site area was redrawn to be reconsidered by the SHLAA panel. The appraisal below refers to the amended site area.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is within the 'Lowland plains' landscape character area. This area is characterised by having an open, low lying flat agricultural landscape. The fields to the north of the B3340 are partially screened from views by the existing field boundaries. The southern field is more open, and offers wider and more distant views to the south, therefore potential landscape impacts. A large number of protected trees adjoin the site on the eastern boundary. As there are distant views to the south and a number of protected trees adjoining the site overall a negative impact is considered.	-2	The policy requires the mitigation of any biodiversity impact including protection of trees. Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	This site occupies a substantial area where prehistoric activity is recorded in the wider landscape. The site is located opposite from the boundary of Bridwell Park, a nationally important grade I listed historic park and garden. Development at this site would extend the pattern of the village in a linear fashion along the B3440. An appeal was dismissed in 2007 in Uffculme on the basis that the woodland to the east of this site provides and important and attractive feature defining the end of the village and functioning as an appropriate settlement boundary; given this decision a negative effect is considered. Uncertainty is also considered as the impact on the prehistoric activity is unknown. Overall a significant negative effect is considered given the conclusion of the appeal decision and potential impact on the area of prehistoric activity.	-3/?	If the policy requires archaeological investigation and appropriate mitigation and protection of Bridwell Park this would provide some mitigation. However given the appeal decision and relevance to this particular site a negative effect remains. An uncertain effect is still considered given the impact on the prehistoric activity is unknown.	-2/?
C) Mitigating the effects of	The original site are included some flood zone 2 and 3 with the majority of the site located in flood zone 1 the lowest level of flood risk. The revised site	-1	The site area was redrawn to exclude areas in flood zone 2 and	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
climate change	boundary excludes all of flood zone 3 with only 1% of the site remaining in flood zone 2. The site could contribute to surface water run off without appropriate mitigation measures, a negative effect overall. Uffculme has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered.		3. A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 and 4 agricultural land and is relatively small therefore an overall a slight negative impact.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 32 new dwellings with 30% affordable housing. A contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Uffculme is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect. The location of this site would result in long walking distances to the village facilities. The distance of this particular site to the primary school is approximately 1 mile which could restrict young children walking to school a slight negative effect is considered.	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
I) Delivering the necessary infrastructure	Site access is achievable subject to any development requiring the extension of the 30 mph limit. The footway at Culm Valley Way would need to be extended to the site. The Mid Devon Community Infrastructure Evidence Report indicates that the primary school can accommodate additional pupils arising from this development without expansion. Given an adequate site access is achievable but the need for footways an overall slight negative effect is considered.	-1	The extension of the footpath along the site frontage to link to the existing network would provide mitigation. Overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Uffculme. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing in Uffculme.

Willand

Policy WI1: Land east of M5, Willand

Land with a gross site area of 4.2 (ha) at land east of M5, Willand is proposed for 42 dwellings with 30% affordable housing. This site now also incorporates part of the site called 'West of B3181' allocated in the AIDPD, the remainder of which is proposed to be deleted. For reference, the allocated site 'West of B3181' was known as 'Land adjacent to B3181' in the 2013 SHLAA Report.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies within the 'lowland plains' landscape character area which is typified by being an open, low lying flat landscape in a prosperous agricultural area. The site is flat in nature. There are some distant views from the west into the site. A slight negative effect is considered as there may be some landscape impact but the proximity of the site to existing development and the M5 provides some mitigation.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation, a neutral effect is therefore considered.	0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off and flood risk but the benefit of a bus service on balance a slight negative effect is considered.	-1	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. Given the mitigation of surface water run off and flood risk a slight positive effect is considered as there is the benefit of a bus service.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The majority of the site (northern section) is grade 3 agricultural land. A small section to the south is grade 1 agricultural land, overall a negative effect is considered as the site includes some grade 1 agricultural land.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 42 new dwellings with 30% affordable housing a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The site is located within Cullompton catchment area and therefore has possible off-site air quality impact within Cullompton AQMA. There are also possible concerns regarding developing new housing in close proximity to the M5 whereby noise impact may negatively affect residential amenity. A Public Right of Way runs through the site. On balance a negative effect is considered overall.	-2	The policy requires the provision of a buffer zone and appropriate planting to mitigate noise from the adjacent motorway. It also requires the retention and enhancement of the public right of way. DM4 Pollution also provides mitigation. As the policy requires 'enhancement' of the public right of way overall a slight positive effect is considered.	+1
I) Delivering the necessary infrastructure	An adequate access is achievable. The Site would serve Cul-de-sac style development and numbers would be dependent on Transport Assessment of the junction with Silver St. The Mid Devon Community Infrastructure	-1/?	The policy requires a transport assessment of capacity at the junction of Silver Street and	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Evidence Report indicates that the primary school can accommodate additional pupils arising from this development without expansion. Overall a slight negative and uncertain effect is considered given the potential for impact on highways and the need for a transport assessment.		Meadow. As mitigation is dependent on the outcome of the transport assessment a neutral and uncertain effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools. Development may contribute towards the junction capacity at M5 J27.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Willand. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Policy WI2: Willand Industrial Estate, Willand (commercial) Option

Land with a gross site area of 2.2 (ha) at Willand Industrial Estate, Willand is proposed for 8,800 sqm commercial floor space within the use classes of B1, B2 and B8.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are a number of protected trees in the site near the south eastern boundary. The site is hidden from the settlement by vegetation. The original site area abutted the M5 and may be seen from the M5 if it is developed. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. Given the loss of protected trees and potential visual impact of	-2	The site area has been redrawn to only include the south east section and therefore the visual impact of the development to be seen from the M5 has been minimised. Policy S9 'Environment' and DM1 'High	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	the site, a negative effect is considered.		Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment, overall a neutral effect is considered.	
B) Protection and promotion of a quality built and historic environment	Previous archaeological work undertaken on this site demonstrated the presence of prehistoric activity within this site, a slight negative and uncertain effect. The location of the site, on the edge of the settlement adjoining existing commercial development is considered a sustainable location for employment growth. On balance a neutral effect is considered although there is some uncertainty remaining due to the potential impact on the area of prehistoric activity within the site.	0/?	Archaeological investigation and mitigation is required by this policy, which improves the impact score, although this remains uncertain as the impact will depend on the results of the investigation. As the site is on the edge of the settlement adjoining existing commercial development and is considered a sustainable location for employment growth a slight positive effect is considered.	+1/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising	The site is located on part greenfield and part brownfield land, a neutral effect.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
resource use				
E) Promoting economic growth and employment	Option provides 21,840 sqm of commercial floorspace helping to diversify the economy, provide opportunities for local employees, reduce out-commuting and encourage inward investment, a positive effect.	+3		+3
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The allocation of commercial land within Willand could decrease air quality within the settlement through increased traffic movement and in particular HGV movements, a slight negative effect.	-1	DM4 Pollution provides mitigation, a neutral effect overall.	0
I) Delivering the necessary infrastructure	Much of the site infrastructure is already in place and there is existing access into the site which could be improved to cover the whole of the site, a neutral effect.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic congestion.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Willand. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet employment needs.

Quicks Farm, Willand
Option

Land with a gross site area of 2.85 (ha) at Quick Farm, Willand is proposed for 68 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is within the 'Lowland plains' landscape character area. This area is characterised by having an open, low lying flat agricultural landscape. The site is flat and well screened by the boundary trees and other trees in the immediate area. Views into the site are very local from the adjacent farmland. There would be limited impact, however as development could result in the loss of boundary trees a slight negative effect is considered.	0	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	The site lies in an area of archaeological potential. Archaeological work to the west has demonstrated the presence of widespread archaeological material including a prehistoric field system and funerary monuments. Development here also has the potential to expose similar associated deposits, a slight negative and uncertain effect.	-1/?	If archaeological investigation and mitigation is undertaken a neutral effect is considered, although this remains uncertain as the impact will depend on the results of the investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 good / moderate quality agricultural land as the site is relatively small a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 68 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The site is located within Cullompton catchment area and therefore has possible off-site air quality impact within Cullompton AQMA, a slight negative effect.	-1	DM4 Pollution provides mitigation, a neutral effect.	0
I) Delivering the necessary infrastructure	An adequate access is achievable via the Quick's Farm access provided it was substantially improved and the 30 mph limit on Uffculme Road was extended to provide the required visibility. Pedestrian and cycle provision would need to be provided as there are none at this location on Uffculme Road. There is existing capacity in the local schools to accommodate development from this individual site. Overall a slight negative effect is considered given the access difficulties.	-1	If access was improved via the Quick's Farm access and the 30mph limit on Uffculme Road any issues around access would be mitigated and therefore a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure.

	Development may contribute towards the junction capacity at M5 J27. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Willand. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Dean Hill Road, Willand

Option

Land with a gross site area of 1.7 (ha) at Dean Hill Road, Willand is proposed for 54 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The area of the site sits on elevated ground (the adjacent M5 is at a considerably lower level). As a result the site has a relatively prominent place in the landscape, offering wide and far views to the west and south-west. The area around the site, partially due to its separation from Willand, is generally open countryside, being agricultural in nature. Developing the site would have an impact on the landscape character, particularly given that the existing housing at the site is relatively well screened from views and would provide little mitigation, a negative effect.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation however as the site is in a prominent position a slight negative effect is likely to remain.	-1
B) Protection and promotion of a quality built and historic environment	Dean Hill Road is divorced from the main body of Willand by the motorway and therefore a slight negative effect is considered.	-1		-1
C) Mitigating	The site is located in flood zone 1 the lowest level of flood risk a neutral	0	A policy requirement in the Local	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
the effects of climate change	effect. The site could contribute to surface water run off without appropriate mitigation measures. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.		Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Site is located on Grade 1 excellent quality agricultural land. Given the loss of excellent quality agricultural land but the relatively small size of the site an overall negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 54 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The site is located within Cullompton catchment area and therefore has possible off-site air quality impact within Cullompton AQMA. There are possible concerns regarding developing new housing in close proximity to the M5 whereby noise impact may negatively affect residential amenity, overall a slight negative impact.	-1	DM4 Pollution provides mitigation, overall a neutral effect.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
I) Delivering the necessary infrastructure	An adequate access is achievable. There is existing capacity in the local schools to accommodate development from this individual site. Given an adequate site access is achievable and educational capacity a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development may contribute towards the junction capacity at M5 J27. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Willand. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land NE of Four Crosses Roundabout, Willand

Option

Land with a gross site area of 9.32 (ha) at Land NE of Four Crosses Roundabout, Willand is proposed for 224 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. View from the site to the east are distant and wide, but to the north are screened by mature trees. Mitigation from the existing development would be limited given the distance between the site and the nearby houses and commercial buildings. Given the potential for the loss of	-3	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment; however	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	trees, the impact on the landscape and the large scale of development, a significant negative effect is considered.		a slight negative effect remains given the scale of the development. Further mitigation may be provided by limiting development close to existing development to the south of the site.	
B) Protection and promotion of a quality built and historic environment	This site lies in an area of high archaeological potential, where prehistoric activity in the immediate vicinity is recorded in the Historic Environment Record and has been demonstrated by archaeological investigations in advance of construction work in the surrounding areas, a slight negative and uncertain effect. The location of this site would also expand the village beyond the boundary currently delineated by the busy roads of the B3181 and B3440. Overall a negative and uncertain effect.	-2/?	If archaeological investigation and mitigation is undertaken this will improve the impact score, although this remains uncertain as the impact will depend on the results of the investigation. However given the location of the site which would expand the village beyond the boundary currently delineated by the busy roads of the B3181 and B3440. A slight negative effect is still considered.	-1/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures. Groundwater flooding maps show a 25-50% chance of groundwater emergence within the site boundary. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered.	-1	Any development should undertake a drainage strategy to mitigate the impact of the groundwater flooding. A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			surface water run-off and arrangements for future maintenance. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The south western corner of the site falls within a Railway Junction Consultation Zone. The site is located on Grade 3 good / moderate quality agricultural land however given in comparison to other potential development sites across the district this site is comparably small and therefore only a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	There may be a slight positive impact for local construction firms and associated trades who would be able to undertake contract work.	+1		+1
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 224 new dwellings a contribution towards future housing need, a significant positive effect.	+3		+3
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. However given the scale of development this may impact on existing services and facilities. The site is located within Cullompton catchment area and therefore has possible off-site air quality impact within Cullompton AQMA. The location of the site would also require the crossing of busy roads to access the village's services and facilities. Overall a significant negative effect overall.	-3	DM4 Pollution provides mitigation, however the scale of development may still impact on existing community services and facilities, and the location of the site would require the crossing of busy roads to access the village's services and facilities. Therefore a negative	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			effect remains.	
I) Delivering the necessary infrastructure	The site can be accessed from B3440 and from the rear of old road. A transport assessment is needed to look at the capacity of a number of junctions including any impact on Junction 28 which may be prejudiced by this development. In capacity terms the Highway Authority and Highways Agency would need to be satisfied that suitable measures at junction 28 could be put in place. There is existing capacity in the local schools to accommodate development from this individual site. Given that an adequate site access is achievable but issues around transport a slight negative and uncertain effect is considered given the need for a transport assessment to determine the impact.	-1/?	A transport assessment would determine the appropriate level of development and suitable measures at junction 28 would provide mitigation, which is appropriate a neutral effect would be considered. There is however an uncertain outcome as these mitigation measures is dependent on the outcome of the transport assessment. Overall a neutral and uncertain effect.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development may contribute towards the junction capacity at M5 J27. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Willand. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Lloyd Maunder Way, Willand (Residential)
Option

Land with a gross site area of 1.7 (ha) at Lloyd Maunder Way, Willand is proposed for 41 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	0.17 ha of site is covered by important mixed trees which are protected with tree preservation orders. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is flat and wedged between industrial uses and the M5. Views from the site are short and it is well screened, a neutral effect. The impact on landscape character is likely to be very low should the site be developed. Overall a slight negative effect is considered as a small area of the site is covered by important mixed trees.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	Lloyd Maunder Way (Residential) is divorced from the main body of Willand by the motorway, therefore a slight negative effect is considered.	-1		-1
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Site is located on Grade 3 good / moderate quality agricultural land, given the relatively small size of the site a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 41 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The site is located within Cullompton catchment area and therefore has possible off-site air quality impact within Cullompton AQMA. There are possible concerns regarding developing new housing in close proximity to the M5 whereby noise impact may negatively affect residential amenity, overall a slight negative effect is considered.	-1	DM4 Pollution provides mitigation for air quality issues and a buffer could be provided to ensure mitigation for noise issues. If these measures are taken into account a neutral effect is considered.	0
I) Delivering the necessary infrastructure	An adequate access is achievable. There is existing capacity in the local schools to accommodate development from this individual site. Given an adequate site access is achievable and educational capacity, overall a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure.

	Development may contribute towards the junction capacity at M5 J27. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Willand. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Lloyd Maunder, Willand (Commercial)

Option

Land with a gross site area of 4.2 (ha) at Lloyd Maunder, Willand is proposed for 8,820 sqm commercial floor space.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site contains 3.7ha of unconfirmed wildlife area, in the north of the site with development potentially impacting upon species diversity. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site would not be visible from the settlement, and is surrounded by hedgerows and trees which would further screen the site. Given the presence of the unconfirmed wildlife area and the potential loss of hedgerows and trees which screen the site, a slight negative effect and uncertain effect is considered.	-1/?	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation therefore a neutral effect is considered. This remains uncertain due to the unconfirmed wildlife site.	0/?
B) Protection and promotion of a quality built and historic environment	This site lies adjacent to the flood plain and such development in this area have the potential to expose waterlogged palaeoenvironmental deposits that can provide information on past land use and man's impact upon it. In addition, recent archaeological work at Four Ways Cross to the east has demonstrated the presence of significant amounts of prehistoric archaeological deposits and features. Lying between these recently discovered sites and the river the presence of prehistoric activity in this area cannot be discounted, a slight negative and uncertain effect.	-1/?	If archaeological investigation and mitigation is undertaken a neutral effect is considered, although this remains uncertain as the impact will depend on the results of the investigation	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	81% of the site is located on Flood zone 1 the lowest level of flood risk, 9% is located in Flood zone 2 and 10% located on Flood zone 3. Both flood zones 2 and 3 are located along the north western edges of the site. The Spratford Stream and an unnamed watercourse could cause fluvial flooding, but the impact currently is unknown. The site could contribute to surface water run off without appropriate mitigation measures. As the site is proposed for commercial development a number of uses could be classed as 'less vulnerable' development and would therefore be compatible with Flood Zones 1, 2 and 3a. However access to the site is likely to be over flood zones 2 and 3. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and flooding issues around the access, but the benefit of a bus service on balance a slight negative effect is considered, and an unknown impact due to the unnamed watercourse and Spratford Stream.	-1/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Development should be focussed in areas of least flood risk first and ensure any development in flood zone 2 and 3a are compatible with these flood zones. As there may potentially be an issue with access over flood zones 2 and 3 overall a neutral and uncertain effect is considered.	0/?
D) Safeguarding and minimising resource use	The site is located on greenfield land. 2.1 ha to the (east) of the site is located on Grade 3 quality agricultural land with the remaining 2.1ha (west) located on Grade 4 agricultural land. As the site is relatively small a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	Option provides 8,820 sqm of commercial floorspace helping to diversify the economy, provide opportunities for local employees, reduce out-commuting and encourage inward investment, a positive effect.	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The site is located within Cullompton catchment area and therefore has possible off-site air quality impact within Cullompton AQMA. The allocation of commercial land within Willand could decrease air quality within the settlement through increased traffic movement and in particular HGV movements, overall a slight negative effect.	-1	DM4 Pollution provides mitigation, a neutral effect.	0
I) Delivering the necessary infrastructure	The site is easily accessible from the B3181 but with poor links to the village centre at present although as the site is for commercial use this may not be necessary overall a neutral effect.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic congestion.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Sampford Peverell. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet employment needs.

Yeoford

Land off Lower Road, Yeoford

Option

Land with a gross site area of 0.7 (ha) at Land off Lower Road, Yeoford is proposed for 17 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the Lowland Plains Character Area which is typically present in the area around Crediton. It traditionally has an open, landscape which at times can be gently rolling. The northern element is largely sheltered from views into the site, and is largely flat. There are limited opportunities to view the southern site from the rest of the village. A level of mitigation would be provided by the existing adjoining housing and the modern farm buildings that abut the southern site, overall a neutral effect.	0		0
B) Protection and promotion of a quality built and historic environment	This site lies in an area of archaeological potential on the edge of the historic core of the settlement at Yeoford. There are a number of listed buildings relatively close to the site however not adjacent. The southern portion of site abuts a small section of the Yeoford Conservation Area, an overall negative and uncertain effect.	-2/?	Design should respect the Conservation Area and listed buildings and their settings. Archaeological investigation and mitigation should also be undertaken. Where these aspects are considered as part of development on this site a neutral effect is considered. Although this remains uncertain as the impact will depend on the results of the archaeological investigation.	0/?
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Yeoford has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off but the benefit of a bus and train service on balance a slight positive effect is considered.	+1	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Given the mitigation of flood risk a positive effect is considered as there is the	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			benefit of a bus and train service.	
D) Safeguarding and minimising resource use	The site is located largely on greenfield land however within the northern part there is a used agricultural barn of timber, block and corrugated iron construction. The site is located on Grade 3 good /moderate quality agricultural land, a slight negative effect as the site is relatively small.	-1		-1
E) Promoting economic growth and employment	Loss of agricultural barn.	-2	Relocation or replacement of economic and employment use, a neutral effect overall.	0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 17 new dwellings a contribution towards future housing need, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Yeoford did not meet the essential criteria to be designated a village however it has been proposed to be village in the Local Plan as it has strong transport links with the provision of a busy and daily train services. It is considered to be appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Adequate highway accesses are achievable for both sites however the wider local highway network consists of narrow roads having restrictive alignments. There is existing capacity in the local schools to accommodate development from this individual site. Given an adequate site access is achievable and educational capacity a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years),	Within the short term, construction traffic associated with the development will

Medium (6-15 years) Long (15+ years)	increase traffic within Yeoford. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Land at M5 Junction 27 adjoining Willand

Land at M5 Junction 27 and adjoining Willand (Commercial) Option

A site of 96 hectares between M5 Junction 27 and Willand could be allocated for mixed commercial floorspace including transport provision, environmental protection, community facilities, carbon reduction and air quality improvements, an agreed phasing strategy and public master planning exercise.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are some important trees to the north of the site and in close proximity to a number of TPOs. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. Development of this scale would have a significant impact on existing landscape character, altering the rural quality of the entrance into Mid Devon from the M5 and the rural character around Willand and Sampford Peverell. Landscape sensitivity is higher, primarily because of the lack of a relationship with an existing settlement, and the change to landscape character that would arise as a result. There are views available into the site from the west, as far as the canal in Sampford Peverell, whereas some parts feel isolated, with reduced visibility – though some parts are visible from the motorway. There are differences in character/visibility between the north and south, the north being more open and plainly visible, the south less so. The landscape appraisal for this site noted that employment development would potentially be more damaging from residential development owing to the larger scale buildings and infrastructure needed. A Phase I habitat survey for	-3/?	The policy requires environmental protection and enhancement including strategic green infrastructure which delivers multiple environmental benefits, this provides some mitigation. Furthermore Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide mitigation for both the impact on the landscape and the natural environment. The habitat survey recommends that if the site is developed upon, hedgerows and woodlands should be retained	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	the northern commercial element of the site (Devon Biodiversity Records Centre, June 2014) was undertaken. The site includes a variety of habitat types including Biodiversity Action Plan habitats. The mature trees and hedgerows within the site were also identified as important for biodiversity. Natural England expressed the potential for the proposed leisure and retail development at J27 to impact on the Culm Grasslands SAC due to traffic impacting the air quality. Further information regarding traffic assessments and any consequential air quality assessment on the effects on this SAC will have to be undertaken to rule out any effect. Given the scale of development, impact on the landscape, biodiversity and potential impact on the Culm Grasslands SAC, overall a significant negative impact is considered although this remains uncertain.		where possible. The landscape assessment recommends that the existing landscape structure should be reinforced to provide integration. Given the scale of development some landscape and biodiversity impact is likely to remain and the potential impact on the Culm Grasslands SAC cannot be ruled out at this stage. Therefore a negative and uncertain effect is considered.	
B) Protection and promotion of a quality built and historic environment	Given the scale of development there could be a wider impact on Willand and Sampford Peverell built environments, including the setting of the Sampford Peverell Conservation Area. The impact of the development would need to consider the nearby Listed building. This site occupies a substantial area within a landscape that has evidence of prehistoric and Roman activity, overall a negative and uncertain effect.	-2/?	The policy requires a public Masterplanning exercise to be undertaken before any planning application is made which will improve the quality of the final design of the development. This site occupies a substantial area within a landscape that has evidence of prehistoric and Roman activity. Any planning application for development here will need to be supported by the results an appropriate level of archaeological works to allow the significance of	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			the heritage asset to be understood along with the impact of the development upon it. A neutral / uncertain effect would be considered.	
C) Mitigating the effects of climate change	The site contains a number of small streams and is in close proximity to the flood plain but is located in flood zone 1 the lowest level of flood risk, a neutral effect. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. The site could also contribute to surface water run off without appropriate mitigation measures. Given the scale of development carbon emissions could be high. Overall a significant negative effect and uncertain effect is considered given the potential but unknown impact of the small streams, the potential contribution to surface water run off and increased carbon emissions.	-3/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A flood risk assessment will be required as even though the site is in flood zone 1 it is over 1ha which will determine the impact of the small steams. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. The policy also requires carbon reduction and air quality improvements, overall a neutral and uncertain effect is considered as the impact of the	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			small streams remains unknown.	
D) Safeguarding and minimising resource use	Part of Junction 27 borders the Mineral Consultation Area for Hillhead Quarry. Development of the site may constrain future working of the remaining permitted reserves within Hillhead Quarry which extend up to the eastern boundary of Junction 27.The site is located on mainly greenfield land with a small portion on brownfield land. The majority of the site is Grade 3 good / moderate quality land with a small section of the site to the west of the M5 grade 4 poor quality land. Given the scale of the development, the potential impact on Hillhead Quarry and the majority of the site on Grade 3 agricultural land a significant negative effect is considered. There is some uncertainty as there is potential that Hillhead Quarry is unviable to extract.	-3/?	No mitigation can be provided at this stage unless Hillhead Quarry is demonstrated as unviable to extract. Therefore a significant negative effect remains although there is still some uncertainty.	-3/?
E) Promoting economic growth and employment	This option provides 96 ha of commercial floorspace helping to diversify the economy and encourage inward investment, a significant positive effect. The policy notes development might comprise 25ha for B8 storage and distribution / logistics, 13ha outdoor leisure destination, 8 ha for designer retail outlet/village, 4.5ha Devon produce promotion centre, 3.4ha sports and activities centre including associated retail, 3ha plant / horticultural, 2.4ha cinema, 1.9ha motorway service area, parking and refuelling services, 1.8ha hotel, conference venue and concert hall and 0.8ha for regional visitor centre. Development in this location and at this scale has the potential to bring major inward investment and job creation for Mid Devon and the wider region. Development will need to recognise impacts could therefore be regional too.	+3		+3
F) Supporting retail	The J27 / Willand site will deliver 96ha of mixed commercial floorspace subject to an impact assessment which will need to demonstrate no adverse impact on town centre vitality and viability at a sub-regional level. The scale of commercial development proposed could significant enhance the retail offer of the district a significant positive effect however without a supporting retail impact assessment to determine the full implications a	-3/?	Development proposals for strategic retail development in this location would be required to be accompanied by a retail impact assessment demonstrating no	-3/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	significant negative / unknown impact is recorded because of the potential to draw trade away from existing town centres.		harm to existing town retail centres.	
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	The site is remote from existing services/facilities however development on this scale would entail the provision of supporting services/facilities. The train station is accessible by cycle path and by car. Given the sites remote location but critical development mass capable of supporting services and facilities which is more than that is required for a new community a positive effect is considered as it would serve the community of the surrounding area. The Renewable Energy, Carbon Reduction and Air Quality Study 2014 suggests that development at junction 27 would result in the need for significantly less housing and commercial development in Tiverton, Cullompton and Crediton, which would be preferable with regard to local air quality.	+1	The policy option includes leisure and community uses including a major outdoor and indoor leisure attraction and cinema that could serve the local community. The policy seeks Carbon reduction and air quality improvements. A Masterplanning exercise will be undertaken before any planning application is made to ensure that essential services and facilities are delivered at the right time and in the right location, overall a positive effect as this development would provide new facilities to the wider community.	+2
I) Delivering the necessary infrastructure	Further assessment work is needed to identify the transport impact, sustainable transport options and strategic infrastructure requirements an uncertain effect. Essential service infrastructure including; water supply, sewage works capacity, gas and electricity will need to be determined as deliverable. Overall a negative and uncertain effect is considered.	-2/?	The policy seeks appropriate transport provision to ensure appropriate accessibility for all modes, improvement to Junction 27 of the M5 motorway and provision of dedicated pedestrian	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			and cycle route to the Tiverton Parkway railway Station. Development will also be expected to include environmental protection and enhancement including Strategic Green Infrastructure which delivers multiple environmental benefits. Development will be expected to be brought forward through a Masterplanning process and agreed phasing strategy to ensure infrastructure remains in step with overall viability of development, overall a positive and uncertain effect a this will require further assessment.	

Secondary/cumulative/synergistic effects:	The Highways Agency require improved capacity infrastructure for Junction 27. The site is of such a scale, it could be considered a new settlement. Matching neighbouring housing density is not so relevant in this case, especially as the site abuts Willand's employment land rather than housing. Development should achieve a satisfactory relationship between housing and employment land. Density and distribution of uses would be determined through a Masterplanning exercise.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Development will occur throughout the lifetime of the plan and the effect should be considered permanent.
Spatial extent: (District wide / local)	The policies set seek to meet the employment needs of the District and wider region.

Land at M5 Junction 27 and adjoining Willand (Residential) Option

A site of 104 hectares between M5 Junction 27 and Willand could be allocated residential development; 3,000 dwellings including transport provision, environmental protection, community facilities, carbon reduction and air quality improvements, an agreed phasing strategy and public master planning exercise.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. Development of this scale would have a significant impact on existing landscape character, altering the rural quality of the entrance into Mid Devon from the M5 and the rural character around Willand and Sampford Peverell. Some parts of the site are more enclosed and shielded from wider views than others. Around Pitt Farm, there are undulating fields and a significant drop in ground level towards the motorway, with wide landscape views to the other side of the valley. Landscape sensitivity is higher, primarily because of the lack of a relationship with an existing settlement, and the change to landscape character that would arise as a result. There are views available into the site from the west, as far as the canal in Sampford Peverell, whereas some parts feel isolated, with reduced visibility – though some parts are visible from the motorway. There are differences in character/visibility between the north and south, the north being more open and plainly visible, the south less so. In terms of the relationship to the countryside, the site is largely contained by the M5 and B3181, and consists of a ridge which then slopes down to the M5. There are views from it and through it. The Phase I habitat survey for the southern housing element of the site (Devon Biodiversity Records Centre, June 2014) was undertaken. The site includes a variety of habitat	-3/?	The policy requires environmental protection and enhancement including strategic green infrastructure which delivers multiple environmental benefits, this provides some mitigation. Furthermore Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan provide some mitigation. The habitat survey recommends that if the site is developed upon, hedgerows and woodlands should be retained where possible. Also it is recommended that fields which are most species rich should be managed for biodiversity purposes. The landscape assessment recommends that the existing landscape structure should be	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	types including Biodiversity Action Plan habitats. The mature trees and hedgerows within the site were also identified as important for biodiversity. The hedgerow running along the road from Braddons Farmhouse to the B3181 junction is particularly species rich in places. Natural England has also expressed the potential for the proposed additional housing at J27 to impact on the Culm Grasslands SAC due to traffic impacting the air quality. Further information regarding traffic assessments and any consequential air quality assessment on the effects on this SAC will have to be undertaken to rule out any effect. Given the scale of development and the impact on the landscape but differences in character and visibility, potential impact on biodiversity and the Culm Grasslands SAC a significant negative effect is considered although this remains uncertain.		reinforced to provide integration. Given the scale of development some landscape and biodiversity impact is likely to remain and the potential impact on the Culm Grasslands SAC cannot be ruled out at this stage. Therefore a negative and uncertain effect is considered.	
B) Protection and promotion of a quality built and historic environment	The site contains a listed building. Given the scale of development there could be a wider impact on Willand and Sampford Peverell built environments, including the setting of the Sampford Peverell Conservation Area. This site occupies a substantial area within a landscape that has evidence of prehistoric and Roman activity, overall a negative and uncertain effect.	-2/?	The policy requires a public Masterplanning exercise to be undertaken before any planning application is made and which will improve the quality of the final design of the development Any planning application for development here will need to be supported by the results an appropriate level of archaeological works to allow the significance of the heritage asset to be understood along with the impact of the development upon it. A neutral / uncertain effect would be	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			considered.	
C) Mitigating the effects of climate change	The site contains a number of small streams and is in close proximity to the flood plain but is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Given the scale of development carbon emissions could be high. Overall a significant negative effect and uncertain effect is considered given the potential but unknown impact of the small streams, the potential contribution to surface water run off and increased carbon emissions.	-3/?	A policy requirement in the Local Plan seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A flood risk assessment will be required as even though the site is in flood zone 1 it is over 1ha which will determine the impact of the small steams. The policy also requires carbon reduction and air quality improvements, overall a neutral and uncertain effect is considered as the impact of the small streams remains unknown.	0/?
D) Safeguarding and minimising resource use	The site is located on mainly greenfield land with a small portion on brownfield land. The majority of the site is Grade 3 good / moderate quality agricultural land with a small area to west Grade 4 poor quality agricultural land. Given the scale of the development and the majority of the site on Grade 3 agricultural land a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
F) Supporting retail	The site is remote from existing retail services however development on this scale would entail the provision of supporting facilities, a neutral effect.	0		0
G) Meeting housing needs	Option provides for 3,000 new dwellings a significant contribution towards future housing need of which 35% should be affordable, a significant positive effect. The mix of dwellings to be achieved on site is already specified within a supplementary planning document, and will be tailored to achieve the appropriate balance.	+3		+3
H) Ensuring community health and wellbeing	The site is remote from existing services/facilities and the scale of the development would require a significant provision of new community service and facilities to provide for the community. The Renewable Energy, Carbon Reduction and Air Quality Study 2014 suggests that development at junction 27 would result in the need for significantly less housing and commercial development in Tiverton, Cullompton and Crediton, which would be preferable with regard to local air quality. The scale of development and proximity to Willand village may have a negative impact on this village community. Given the need for a substantial level of new services and facilities, potential impact on Willand village and potential impact on air quality and significant negative impact is considered.	-3	The policy seeks Carbon reduction and air quality improvements. A Masterplanning exercise will be undertaken before any planning application is made to ensure that essential services and facilities are delivered at the right time and in the right location. The policy also requires community facilities to meet local needs arising from housing development which provides mitigations. However given the scale of development and proximity to Willand village and concerns over the impact on the village community a negative impact remains.	-2
I) Delivering the necessary	There is limited capacity to support this development, on the assumption it is a relatively large development, a new primary school may be required	-3/?	The policy seeks community facilities to meet local needs arising	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
infrastructure	given constraints on other schools in the area. Further assessment work is needed to identify the transport impact, sustainable transport options and strategic infrastructure requirements which could have a negative effect although this remains uncertain. Essential service infrastructure including; water supply, sewage works capacity, gas and electricity will need to be determined as deliverable. Overall a significant negative effect given the potential impact on transport and other essential service infrastructure.		from the housing development. The policy seeks appropriate transport provision to ensure appropriate accessibility for all modes, improvement to Junction 27 of the M5 motorway and provision of dedicated pedestrian and cycle route to the Tiverton Parkway railway Station. Development will also be expected to include environmental protection and enhancement including Strategic Green Infrastructure which delivers multiple environmental benefits. Development will be expected to be brought forward through a Masterplanning process and agreed phasing strategy to ensure infrastructure remains in step with overall viability of development, overall a positive effect although uncertain (as further assessments are required) is considered as the improvement to J27 will be a positive impact for both the new	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			and existing community.	

Secondary/cumulative/synergistic effects:	The Highways Agency require improved capacity infrastructure for Junction 27. The site is of such a scale, it could be considered a new settlement. Matching neighbouring housing density is not so relevant in this case, especially as the site abuts Willand's employment land rather than housing. Development should achieve a satisfactory relationship between housing and employment land. Density and distribution of uses would be determined through a Masterplanning exercise. The large scale of development in one location would be better for the district as a whole in terms of carbon production.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Development will occur throughout the lifetime of the plan and the effect should be considered permanent.
Spatial extent: (District wide / local)	The policies set seek to meet the housing needs of the District.

Appendix 6.7

Managing Development Policies

Please note the original DM 1 'Presumption in favour of sustainable development' is deleted.

Policy DM1 High quality design

This policy recognises the importance of good design as a key aspect of sustainable development, setting out key principles to be adhered to. It requires development to have a clear understanding of character, context and surrounding area. New development is required through the policy to make a positive contribution to local character, create safe places, encourage sustainable transport and take account of architecture, layout, siting, scale, massing, orientation, fenestration, materials, landscaping and green infrastructure. The Government's review of housing standards mean that a requirement for major residential developments to achieve a 75% score against the Building for Life standard is no longer supported.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Criteria within the policy states that development should demonstrate a clear understanding of the characteristics of the site, wider context and the surrounding area as well as a positive contribution to the local character including biodiversity assets, a positive effect on the natural environment.	+2		+2
B) Protection and promotion of a quality built and historic environment	The policy states that the design of new development must be of high quality and based on set principles: characteristics of the site, efficient and effective use, positive contribution to local character, creation of safe and accessible places, visually attractive places including taking into account Architecture, Siting, layout, scale and massing, orientation and fenestration, materials and landscaping and green infrastructure and appropriate use of sustainable urban drainage schemes. The policy also requires development to make a positive contribution to character including heritage assets, and therefore scores positively for the effect it should have on listed buildings, historic parks and gardens and the character of conservation areas. The policy's focus on architecture, scale, and materials ensure that the details that contribute towards historical character are positively emphasised. Overall this policy will have a significant positive effect.	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	Criteria within the policy seek the efficient and effective use of sites, a positive effect. Policy criteria seek appropriate drainage including sustainable urban drainage systems (SUDs) and connection of foul drainage to a main sewer where available, a positive effect. Through designs that maximise opportunities for the use of sustainable transport modes such as walking, cycling and public transport and environmental improvements incorporating facilities such as plug-ins for ultra-low emission vehicles, carbon emissions can be reduced, a significant positive effect towards climate change.	+3		+3
D) Safeguarding and minimising resource use	Criteria within the policy seek the efficient and effective use of sites, a minor positive effect.	+1		+1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Criteria in policy seek high quality development that create visually attractive places that do not adversely effect on the privacy and amenity of proposed neighbouring properties, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Criteria within the policy seek the creation of safe and accessible places that encourage sustainable modes of travel such as walking and cycling, a positive effect.	+2		+2
I) Delivering the necessary infrastructure	Proposals should take into account green infrastructure, a positive effect.	+2		+2

Secondary/cumulative/synergistic effects:	This policy will complement a number of other policies within the plan. DM3 (transport and air quality) through prioritising sustainable modes of transport in developments, particularly walking and cycling; and DM12 (design of housing) through complementary approaches to high quality local places, daylight, orientation, materials etc; and

	DM25 (development affecting heritage assets) as the policy requires development to make a positive contribution to local character.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, as this policy will apply to all new development that takes place in the district over the lifetime of the plan. Immediate to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM2 Renewable and low carbon energy

The policy requires proposals for renewable or low carbon energy to be weighed against their impact. The policy recognises the importance of delivering low carbon or renewable technology, but understands that there are other considerations that need to be taken account of in order for such developments to be acceptable in planning terms. The policy text has been updated from LP3 to list proposals for renewable or low carbon energy will be permitted where they do not have a significant adverse impact on character, amenity, visual quality, "the community and agricultural land" of the area reflecting Government guidance. Requirement's for Environmental Impact Assessment has been deleted.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The policy requires development proposals to take account of landscape character, which could be detrimentally affected by renewable technology development, for example where large scale solar farms are proposed in sensitive landscapes. A negative effect is considered. The policy seeks to reduce the likelihood of habitat fragmentation and to consider the environmental amenity of nearby properties. Such proposals would also have to be assessed against other policies within the Local Plan, which provide protection for landscapes, a positive effect.	-2	In order to mitigate such development in sensitive landscapes the policy requires the benefits of proposals to be weighed against their impact, and does not permit such development where it would have a significant effect on 'character, amenity and visual quality of the area'. The policy seeks to reduce the likelihood of habitat fragmentation.	+2
B) Protection and promotion of a quality built and historic environment	The policy requires development proposals to take account heritage assets, which could be detrimentally affected by renewable technology development, for example where solar panels are proposed on listed buildings or buildings in a conservation area. A negative effect is considered.	-2	In order to mitigate such issues the policy requires the benefits of proposals to be weighed against their impact, and does not permit such development where it would have a significant effect on 'character, amenity and visual quality of the area'. Such proposals would also have to be assessed against other policies within the Local Plan, a positive effect.	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	Proposals for renewable or low carbon energy will be permitted where they do not have a significant adverse impact, a positive effect towards mitigating climate change.	+3	The policy contains a number of factors to mitigate a number of possible negative aspects of renewable and low carbon development including having regard for character, amenity, visual quality of the area, agricultural land value and biodiversity. The policy represents a significant positive impact on delivering the objective.	+3
D) Safeguarding and minimising resource use	The policy, by permitting renewable energy generation, could reduce district-wide and nation-wide reliance on other forms of energy, such as those derived from fossil fuels. This could have a significant impact on reducing the loss of limited resources.	-2	The policy requires development to recognise the quality and productivity of agricultural land including the quality and productivity of the best and most versatile agricultural land (grade 1, 2 & 3a). Overall the impacts are considered to significantly contribute towards achieving the objective.	+3
E) Promoting economic growth and employment	Renewable energy schemes can provide a form of alternative income, particularly for farmers wishing to diversify from traditional land uses. Overall, a slight positive outcome has been assumed as a result.	+1		+1
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	There are positive and negative impacts in terms of public support, which vary depending on the individual proposal in question. Overall a neutral impact has been assumed, given the both positive and negative feedback the Council has previously received about such projects.	0		0
I) Delivering the necessary	Renewable energy schemes now form a significant component in the Countries energy mix and infrastructure, Contributing significantly towards	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
infrastructure	the UKs renewable energy target.			

Secondary/cumulative/synergistic effects:	Wind turbines can have cumulative impacts on a landscape, particularly where isolated small scale developments are granted, eventually dotting the landscape. The policy requires development not to have significant adverse impacts, including cumulative impacts in relation to other similar developments, with many developments being required to support their application with a Landscape and Visual Impact Assessment (LVIA). The policy also works in tandem with DM3 (transport and air quality) to consider the environmental amenity of nearby properties, and with DM27 (protected landscapes) and DM28 (other protected sites) to provide protection against habitat fragmentation. Proposals should have reference to the Mid Devon Landscape Character Assessment (2011) and Landscape Sensitivity Study (2013).
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	The scoping stage of installing renewable energy technology to investigate feasibility, such as the installation of anemometer masts to assess wind speeds, will have a temporary effect on the landscape, as temporary permissions are often granted for the masts. Large renewable projects, such as solar farms are often granted long-term permissions, for example 25 years, so that once the Fed In Tariff expires, the facility is required to be removed, in order to protect the landscape and best agricultural land. Immediate to long term as an increasing number of applications have been received in recent years, which is likely to increase as time progresses given the pressures to reduce carbon emissions as a result of climate change.
Spatial extent: (District wide / local)	District wide.

Policy DM3 Transport and air quality

The policy aims to manage the impact of additional transport on air quality arising from development proposals. The policy requires major development that significantly increases levels of movement to be accompanied by an integrated Transport Assessment, Travel Plan, Environmental Statement and Low Emission Assessment. Where Low Emission Assessments are required the policy requires them to specify their impact on existing Air Quality Management Areas, to set out modelling of transport emissions and onsite mitigation measures to off-set negative impacts on air quality. The impacts of transport emissions on environmental assets must also be assessed and mitigated where necessary.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The impacts of transport emissions on environmental assets must also be assessed, with the policy requiring mitigation measures to reduce negative impacts.	0		0
B) Protection	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
and promotion of a quality built and historic environment				
C) Mitigating the effects of climate change	The policy requires major development that significantly increases levels of movement to be accompanied by an integrated Transport Assessment, Travel Plan, Environmental Statement and Low Emission Assessment. Through the implementation of the requested statements it is anticipated that traffic movements in new development can be reduced, thereby decreasing traffic CO2 pollution, a positive effect.	+2		+2
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	The impact on town centres could also be a positive factor. Cullompton and Crediton are both Air Quality Management Areas, with Tiverton at risk of being classified in addition. It is noted that the poor air quality, caused by the significant amount of road traffic through Cullompton and Crediton, has a link to the viability and vitality of the town centre. This policy may have a positive effect on the town centres through the requirement for development in those areas to provide on-site mitigation to reduce negative impacts on air quality.	+2		+2
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	It is acknowledged that new development can result in an increase in transport and associated emissions, a negative effect. Without this policy in place only the site specific measures on the largest allocations will apply. These provide a level of protection, however the policy has a specific requirement for major development to provide low emission assessments	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	and associated on site mitigation measures that include encouraging public transport, walking and cycling. This provides a mechanism for addressing negative air quality impacts, whilst also encouraging the introduction of low emission technologies, such as electric charging points, thereby creating the infrastructure for longer term climate change mitigation, an overall positive effect.			
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	Emissions can have significant indirect negative impacts on biodiversity and in particular on protected species. The policy links to Policy DM28 (other protected sites) in order to provide protection for sites that may be vulnerable due to their proximity to major roads (such as the Rackenford Special Area of Conservation near to the A361).
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Temporary effects will arise during construction phase, for which the provision of Travel Plans are designed to allow developments to set out alternative sustainable modes of transport as a means of accessing the development site. Permanent effects should be highlighted within the supporting evidence submitted with an application, and mitigation required. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM4 Pollution

This policy aims to protect individuals, the natural environment and general amenity from the harmful effects of noise, odour, light, air, water, land and other forms of pollution. The policy requires development to provide an impact assessment of the effects of pollution from development and details of mitigation where necessary.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The policy acknowledges that development may have a negative impact on the quality of the environment through the direct, indirect and cumulative effects of pollution. However, the policy only permits development where these effects do not have an unacceptable negative impact. Whilst this is a general policy, it is anticipated that with it in place, there is an additional level of protection against developments that would pollute the local	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	environment, a positive effect.			
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	No impact.	0		0
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	There could be a positive impact on town centres as a result of implementing the policy. Cullompton and Crediton are already Air Quality Management Areas, with Tiverton at risk of being classed in addition. The various forms of pollution can have a damaging impact on the vitality of a town centre. This policy may result in mitigation schemes being put in place within town centres to address potential negative impacts.	+2		+2
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	The policy acknowledges that development may have a negative impact on the quality of the environment through the direct, indirect and cumulative effects of pollution including on light, air, odour and noise. However, the policy only permits development where these effects do not have an unacceptable negative impact. Whilst this is a general policy, it is anticipated that with it in place, there is an additional level of protection against developments that would pollute the local environment, a positive effect.	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	Traffic pollution from individual vehicles can have a low level impact, but indirectly and cumulatively there can be more significant impacts on amenity, biodiversity and the environment. The policy seeks to minimise such unacceptable negative impacts.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Temporary, in that some pollution may result during construction; however it is the lifetime of a development where pollution will continue to have an effect. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM5 Parking

The policy takes account of the fact that car ownership is predicted to increase, rather than decrease, over the next 10-15 years, and particularly reflects the importance of car usage in Mid Devon due to its rural nature. Rather than try to limit car usage through applying maximum parking standards, the policy seeks to provide adequate parking, and seeks to deliver low emission vehicle infrastructure to new developments. This recognises that restrictions in parking do not correspond to a reduction in car ownership, which has caused increasing congestion within residential areas. A parking SPD has been produced which provides further guidance. The policy has been updated from LP3 to clarify the retail requirements and “Gross floor area” as opposed to “shop floor area”.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	No impact.	0		0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The analysis highlights that the policy has potentially a mixed outcome in terms of reducing carbon dioxide emissions. This is because the positive benefits of using electric vehicles is to some extent offset by the fact that their production incurs a high carbon cost, whilst the electricity that	0	The policy states that design must enable and encourage the maximum use of sustainable modes of transport, including the provision for cyclists and low-	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	powers them may be derived from fossil fuels, which are a finite resource. However the supporting text does encourage the option for other alternative fuel sources to be used in future.		emission vehicles.	
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	The proposed parking standards for non-residential development is unlikely to change the approach that has previously been applied, and is not expected to result in any new negative impacts, a neutral effect.	0		0
F) Supporting retail	The proposed parking standards for non-residential development is unlikely to change the approach that has previously been applied, and is not expected to result in any new negative impacts, a neutral effect.	0		0
G) Meeting housing needs	These are related to the delivery of affordable housing, as the requirement to deliver low emission technologies adds an additional requirement and cost to developers which may impact on viability. However, building EV charging infrastructure into a development alongside all the other utilities infrastructure is likely to be far cheaper than retro-fitting, and is not considered to impose an excessive burden on development, a slight positive effect. The application of a minimum parking standard has implications for the land take of development, as requiring more parking is an additional requirement on space within a development. Therefore, it is possible that this requirement may result in a squeeze on other land-based uses within a development, such as garden sizes, or could perhaps result in a reduction in the overall number of dwellings to be constructed on a given site (and hence would lower the ratio of dwellings per hectare). However, given that residential sites can exceeded the proposed minimum, it is considered that the standard does not place a disproportionate burden on development. Therefore, the implementation of a minimum parking standard is considered to have a balanced/neutral impact, taking account of some positive and some negative impacts arising.	0		0
H) Ensuring	It is difficult to be absolutely certain about the positive outcomes, given	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
community health and wellbeing	that low emission technologies are relatively new, though there should be beneficial impacts on public transport and opportunities for walking and cycling, a slight positive effect.			
I) Delivering the necessary infrastructure	The success of the policy will be greatly determined by the introduction of affordable mass-market low emission vehicles. The introduction of low emission infrastructure alone is unlikely to be sufficient to change car ownership preference from petrol/diesel usage to more sustainable alternatives. However, without infrastructure in place to enable residents and businesses to charge/re-fuel low emission vehicles there would be a significantly reduced likelihood of the technologies taking hold in the district. It is likely that residents will continue to make use of traditional diesel/petrol vehicles until mass market low emissions technology becomes common across the country, thereby driving down costs, a slight positive effect.	+1		+1

Secondary/cumulative/synergistic effects:	The impact on the use of electric vehicles is likely to have a cumulative effect, as a 'critical mass' will need to be reached in terms of the availability of infrastructure and reduced costs of vehicles for their wider use to take place. Synergistically, this policy, and others such as DM9 (conversion of rural buildings) and DM18 (rural employment development) is unlikely to lead to a reduction in car use in the countryside; more likely car usage may be increased as a result.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	The impact will be permanent in relation to setting the amount of parking available per development, and through permanent installation of electric vehicle charging infrastructure. Immediate to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM6 Rural exception sites

The policy allows for the development of sites for predominantly affordable or low cost housing, including self-build housing to meet proven local need in rural areas subject to certain criteria. The policy has been updated from a version contained within the Allocations and Infrastructure Development Plan Document to allow the inclusion of a proportion of market housing within exception sites. The NPPF paragraph 54 allows for the potential for exception sites to contain some market housing to facilitate the provision of significant additional affordable housing to meet local needs. The proportion of market housing will be expected to be less than the provision of affordable housing and the market housing will be at the lowest level to ensure that the development is deliverable.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The policy may result in more homes being built on the edge of settlements which cumulatively could impact on landscape, a negative effect.	-2	Criteria within the policy note that exception sites are expected to adjoin a settlement and take into account the visual impact and other relevant planning issues, positive effect. Given the potential for cumulative impact against mitigation measures an overall neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	No impact.	0		0
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	The policy allows for the development of sites for predominantly affordable or low cost housing; including self-build housing to meet proven local need in rural areas subject to criteria, a positive effect. The NPPF paragraph 54 allows for the potential for exception sites to contain some market housing to facilitate the provision of significant additional affordable housing to meet local needs.	+2	Criteria within the policy ensure that the proportion of affordable housing will always be larger than the provision of market housing on exception sites and developers will be expected to submit evidence to demonstrate the level of market housing proposed is the lowest	+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			level needed to deliver significant affordable housing. Evidence of local need will also be required in relation to exception sites.	
H) Ensuring community health and wellbeing	Exception sites allow affordable housing to come forward in rural locations where other developments would not normally be permitted. Such schemes allow people to remain living in settlements where they have a strong local connection. This is considered to be a positive impact on local community well-being.	+1		+1
I) Delivering the necessary infrastructure	The policy may result in more homes being built on the edge of settlements which cumulatively could impact on local infrastructure including traffic, schools and health services. However, such affordable housing schemes are generally exempt from contributions towards infrastructure, so there may be a negative impact as a result of housing growth taking place without the necessary accompanying growth in rural infrastructure.	-2		-2

Secondary/cumulative/synergistic effects:	The policy may result in more homes being built on the edge of settlements which cumulatively could impact on the landscape and local infrastructure. Any proposals would be determined with regard to DM1 (high quality design) and also Mid Devon's Landscape Character Assessment.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Development coming forward through this exception site policy is considered permanent. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM7 Gypsy and traveller accommodation

Planning applications for gypsy and traveller pitches including for travelling showpeople will be permitted subject to certain criteria. The policy has been updated from the version included within the Allocations and Infrastructure Development Plan Document to clarify sites will be permitted subject to suitable on-site facilities, consideration of environmental quality and that sites with employment or storage elements should not have a harmful impact on local amenities.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The location of gypsy and traveller sites in the open countryside could impact upon landscape sensitivity and local biodiversity, a negative effect.	-2	Development proposals should be considered against all policies within the Plan including those on landscape protection and biodiversity. Sites with associated employment or storage elements will be permitted where the location will not have a harmful impact on the local amenity or the environment. Given the negative impact on the natural environment but availability of mitigation measures a slight negative effect is considered.	-1
B) Protection and promotion of a quality built and historic environment	The location of gypsy and traveller sites in the open countryside could impact upon sites of historical interest, a negative effect.	-2	Development proposals should be considered against all policies within the Plan including those on the historic environment.	-1
C) Mitigating the effects of climate change	Sites should be located where they can access services within the use of a car. Though the use of cars for such purposes cannot be ruled out, the possibility of the use of sustainable modes of transport is considered to be a minor positive impact on carbon emissions.	+1		+1
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	Sites with associated employment or storage will be permitted where there is a specific justification subject to harmful impact on local amenity or the local environment, a positive effect towards supporting local businesses.	+1		+1
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	The policy supports proposals for gypsy and traveller pitches including travelling showpeople where a need is identified. Occupancy will be	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	limited to those who met the Governments published definition of gypsies and travellers, a positive effect.			
H) Ensuring community health and wellbeing	New gypsy and travellers sites could place extra pressure on existing services.	+2	Criteria within the policy seek proposals that provide suitable on-site facilities including space for children's play, consideration of environmental quality for residents, a positive effect.	+2
I) Delivering the necessary infrastructure	The policy may result in residential sites being built in the open countryside which cumulatively could impact on local road infrastructure. A minor negative impact, given the generally small scale of typical sites in the district.	-1		-1

Secondary/cumulative/synergistic effects:	The provision of gypsy and traveller sites in rural locations will increase the number of people living in the countryside, this has effects in terms of carbon emissions and services reaching those dwellings
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permissions can be either temporary or permanent. Immediate too long term.
Spatial extent: (District wide / local)	District wide.

Policy DM8 Rural workers dwellings

This policy permits the development of housing for rural workers outside of defined settlement limits, providing a criterion based approach when this can take place: the nature and demand of an existing rural business are such that a full time worker has an essential need to be a permanent resident, the need cannot be met elsewhere (a nearby settlement or dwelling), the size and scale of the residence is commensurate with the scale of operation and the rural enterprise has been established for at least three years and is financially sound. Where a rural business is not established the policy allows for a mobile home on a temporary period against set criteria. Permission will also be subject to an occupancy condition.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Negative impacts could arise from development taking place within the open countryside to the detriment of the surrounding landscape.	-2	To minimise the harm, the policy has been worded so that the scale of any building is proportionate to the size of	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			the enterprise, and that it reflects the location and setting of the site. Given the proposed mitigation measure an overall slight negative effect is considered.	
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The location of the dwelling, outside of a settlement is likely to lead to increased car usage in order to access services that potentially could be some distance away, resulting in increased carbon emissions, a negative effect.	-2	In order to minimise such harm, developments will only be permitted where there is no existing housing or conversion of existing buildings is not an option, thereby reducing opportunities where the policy will apply. Given the proposed mitigation measure an overall slight negative effect is considered.	-1
D) Safeguarding and minimising resource use	This policy permits the development of housing for rural workers outside of defined settlement limits.	-2	In order to minimise such harm, developments will only be permitted where there is no existing housing or conversion of existing buildings is not an option, thereby reducing opportunities where the policy will apply. Given the proposed mitigation measure an overall slight negative effect is considered.	-1
E) Promoting economic growth and employment	The policy will positively help a rural business where the need for a worker to be permanently on site is essential to the success of the enterprise, a positive effect.	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting	The policy will deliver a limited number of new housing where there is a	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
housing needs	rural need, a positive effect. This policy attaches a planning condition to rural workers dwellings, tying the dwelling to the agricultural or occupancy use. The removal of a tie is restricted to situations where the use is no longer needed, and requires provision of strong evidence as justification. Whilst not classed as affordable housing, this type of housing could be considered low cost. The tie placed on the building by a planning condition effectively keeps the cost of the property to a level that makes it more affordable to rural workers, thereby possibly providing a form of lower cost housing that meets a local need. Whilst this cannot be highlighted on the sustainability appraisal as having a positive effect on 'affordable housing', it does have a local positive impact.			
H) Ensuring community health and wellbeing	By providing rural workers' dwellings, the policy may permit people to remain living in places from which they originate, where otherwise, many people may have had to move away to find suitable affordable accommodation. A slight positive impact is anticipated.	+1		+1
I) Delivering the necessary infrastructure	The policy may result in more homes being built in the open countryside which cumulatively could impact on local infrastructure including traffic, schools and health services, a negative effect.	-2		-2

Secondary/cumulative/synergistic effects:	The policy may result in more homes being built in the countryside which cumulatively could impact on the landscape. Any proposals would be determined with regard to DM1 (high quality design) and also Mid Devon's Landscape Character Assessment and the Landscape Sensitivity Assessment. This will have secondary effects on the availability of agricultural/forestry/other important rural labour in the vicinity. The policy should have a positive impact in this regard.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	The policy permits temporary dwellings where a firm intention to establish a rural enterprise is demonstrated, which will result in dwellings appearing for a limited period. Otherwise, the construction of rural workers dwellings is likely to have a permanent impact. The effects will be permanent for occupancy conditions, though the policy does set criteria whereby an occupancy condition can be removed. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM9 Conversion of rural buildings

This policy permits the conversion of redundant or disused rural buildings to a residential or employment use. The policy recognises the importance of rural buildings to the landscape and character of Mid Devon and permits their conversion where proposals meet a number of criteria regarding access, design, amenity and compatibility with rural character.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Rural buildings such as barns can provide habitats for creatures such as barn owls and bats, particularly if the buildings have been redundant for some time, and therefore negative effects could be anticipated. Other effects include the impact on the rural landscape of the district. Rural buildings contribute positively towards the character and appeal of the district. Inappropriate conversion of such buildings to a residential or employment use could therefore have a negative impact. Given the negative effect to nature conservation / landscape through conversion but an overall negative effect is considered.	-2	However, criteria within the policy seek to retain any nature conservation interest associated with the site or building and provide a net gain in biodiversity where possible, and the supporting text requires provision of a habitat survey and makes reference to other legislation that exists to provide protection for priority species, a positive effect. The policy seeks to improve the landscape by retaining buildings of character – others will eventually be knocked down, a neutral effect.	0
B) Protection and promotion of a quality built and historic environment	Rural buildings contribute positively towards the character and appeal of the district. Inappropriate conversion of such buildings to a residential or employment use could therefore have a negative impact.	-2	The policy seeks designs that will retain the original character of the building and its surrounds, a positive effect. Given the negative effect to through conversion but the mitigation measures available an overall neutral effect is considered.	0
C) Mitigating the effects of climate change	The policy could have an effect on carbon emissions. Locating development away from existing settlements is likely to lead to increased car usage, given the low levels of public transport in the more rural parts of the district. Further negative impacts will be felt in terms of waste, as the creation of isolated homes in the countryside requires services, such as waste collection to come to them. This has implications for carbon usage in increasing the length of collection rounds, as well as increasing the cost of services. To some degree there will be a positive impact on carbon	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	emissions as converting an existing building will use less energy than constructing a brand new dwelling. Given the negative effect through the creation of isolated homes in the countryside against some positive effects an overall slight negative effect is considered.			
D) Safeguarding and minimising resource use	Further negative impacts will be felt in terms of waste, as the creation of isolated homes in the countryside requires services, such as waste collection to come to them. To some degree the re-use of rural buildings is a positive effect. Given some positive and some negative impacts, and overall neutral impact has been considered.	0		0
E) Promoting economic growth and employment	There are positive impacts on the provision of employment floorspace in rural areas as a result of converting rural buildings for a commercial purpose. Tourism could also be affected as the rural nature is central to the attraction of the district, a minor negative effect.	-1	To mitigate such impacts the policy requires a conversion to be undertaken without significant alteration to existing building, to retain the original character of the building and surrounding landscape, and to result in an overall enhancement to the immediate vicinity as required by the NPPF. Given the positive effect of employment floorspace and negative effect to tourism through conversion but mitigation measures available an overall neutral effect is considered.	0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	There are positive impacts on the number of houses created, in rural areas.	+2		+2
H) Ensuring community health and wellbeing	No impact.	0		0
I) Delivering the	The policy may result in more homes being built in the open countryside	-2		-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
necessary infrastructure	which cumulatively could impact on local infrastructure including traffic, schools and health services, a negative effect.			

Secondary/cumulative/synergistic effects:	The conversion of rural buildings to residential use will increase the number of people living in the countryside; this has effects in terms of carbon emissions and services reaching those dwellings. Synergistically, when assessed alongside Policy DM18 (rural employment development) which sets criteria by which new employment development can take place in the countryside, both policies will be adding to the number of people not living and working in the main settlements. However there is a limited stock of available buildings for conversion, so it is anticipated that these effects will not be too significant.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Once converted, those buildings cannot be used again for their original purpose. However the policy stipulates that any conversion must result in an enhancement of the setting, thereby having a positive permanent effect on the landscape. Immediate to long term. Proposals for conversion of rural buildings could be submitted immediately given the provisions of the NPPF.
Spatial extent: (District wide / local)	District wide.

Policy DM10 Replacement dwellings in rural areas

This policy permits the replacement of existing dwellings with new buildings, but limits the floorspace to no greater than that of the original property.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	To ensure the character of the area is not harmed, the size of new dwellings will be restricted to that of previous dwellings except where there are any unspent permitted development rights, a positive effect on the districts landscape.	+2		+2
B) Protection and promotion of a quality built and historic environment	To ensure the character of the area is not harmed, the size of new dwellings will be restricted to that of previous dwellings except where there are any unspent permitted development rights, a positive effect on the districts built and historic environment.	+2		+2
C) Mitigating the effects of	In terms of carbon emissions the construction of a new building will result in the use of large amounts of emissions during the manufacture of the	0	A new building will have to adhere to higher standards of energy efficiency as	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
climate change	materials and during construction. A new building may also feature renewable energy technologies as part of the design, thereby increasing the capacity of the district.		set out by building control regulations. Given the negative effect associated with construction but mitigation measures proposed, an overall neutral effect is considered.	
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	A general beneficial impact of the policy is that it may allow sub-standard homes to be improved, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	No impact.	0		0
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	Synergistically this policy will be read in conjunction with policies DM1 (high quality design) and DM12 (design of housing) thereby ensuring that any replacement dwellings are built to a high standard, improving the quality of the housing stock across the district.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Replacement buildings will be permanent additions to the landscape. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM11 Residential extensions and ancillary development

This policy sets out the conditions under which extensions to existing dwellings and any other ancillary development can take place.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Extensions and ancillary development can have an impact on an area, though the scale of the impact is typically determined by the size of the development. Small domestic extensions, where there are few immediate neighbours can have very little impact. Larger extensions, taking up significant parts of a garden, or that affect the amenity of neighbours, or are in a rural location and visually impact on the quality of a landscape can be particularly detrimental to the local environment. Given the positive and negative effects an overall neutral effect is considered.	0		0
B) Protection and promotion of a quality built and historic environment	Extensions and ancillary development can have an impact on building character, a negative effect.	-2	Criteria within the policy require development to respect the character, scale, setting and design of the existing dwelling, a positive effect. Given the positive and negative effects an overall neutral effect is considered.	0
C) Mitigating the effects of climate change	In terms of climate change impacts, permitting extensions increases the footprint of a property, and thereby the energy consumption of a property, a slight negative effect.	-1		-1
D) Safeguarding and minimising resource use	The land an extension is built on is often classed as previously developed land, which is being reused, a slight positive effect.	+1		+1
E) Promoting economic growth and employment	Householder applications make up approximately 30% of the applications received by Mid Devon District Council and these typically request planning permission for extensions. The building work undertaken for this type of development is an important part of the local economy and is typically undertaken by local self-employed building contractors or small firms, an overall positive effect.	+2		+2
F) Supporting retail	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	In rural areas adding an extension to a property can significantly increase the desirability and therefore the price of a dwelling. The reduction of 'lower cost' housing in rural areas contributes towards gentrification and creates less sustainable communities. On the reserve of this however, permitting someone to extend their home may remove their need to move home, either to a bigger property, or to one that is designed to meet their needs, e.g. if they have a disability. In such cases allowing them to extend their own home may mean they do not need to join a waiting list for an adapted local authority or housing association property. Given the positive and negative effects an overall neutral effect is considered.	0		0
H) Ensuring community health and wellbeing	Residential extensions and ancillary development could harm the living conditions of neighbours through the loss of light, privacy, and overbearing or over-dominating effect, a negative effect.	-2	Criteria within the policy state that development will not have a significant adverse impact on the living conditions of occupants of neighbouring properties and will not result in the over-development of the dwelling curtilage. Given the negative effects but mitigation available, an overall neutral effect is considered.	0
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	The local street scene can be affected by many properties adding extensions. Extensions may also present opportunities for home working.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Once built, extensions and ancillary development are permanent additions. Immediate to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM12 Design of housing

This policy seeks to guide the development of new housing within the district. It stipulates requirements to deliver a high quality housing design, including provision of adequate space for storage, adaptability, private amenity space and in accordance with car parking standards. The policy deviates from LP3 as a requirement for a proportion of homes to meet lifetime homes is no longer supported by the Governments Review of Housing Standards.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The policy requires the delivery of high quality places that take account of local character, physical context, density and land use mix, an overall positive effect for the protection of the natural environment.	+2		+2
B) Protection and promotion of a quality built and historic environment	The policy requires the delivery of high quality places that take account of local character, physical context, density and land use mix, a significant positive effect for the promotion of a quality built environment.	+3		+3
C) Mitigating the effects of climate change	Housing development should include space for cycle storage, a minor positive effect. Criteria within policy seek sustainable forms of development that maximise the natural benefits of the site through design, materials, technology and orientation, a further positive effect.	+2		+2
D) Safeguarding and minimising resource use	Adaptable dwellings that can accommodate a range of occupiers and their changing needs over time which will include the provision of a stairway suitable for stair lift installation or space for the provision of a lift in homes with more than one storey, allowing residents to remain in their homes for longer is considered a positive effect.	+1		+1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	The policy seeks to deliver a high quality housing design, including provision of adequate space for storage, adaptability, private amenity space and a proportion of homes to meet lifetime homes standard and in	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	accordance with car parking standards, a significant positive effect on the new housing stock of the district.			
H) Ensuring community health and wellbeing	Research by the RIBA in recent years highlighted that the UK is building some of the smallest houses in Europe. It noted the importance of providing flexibility of space within the home to adapt to changing needs, to provide space for family life and opportunities for children to study in private and most importantly that improved health and well-being can result from living in a well-designed home that provides sufficient space to function well and support privacy and social activity. This policy includes the inclusion of space for cycle storage and the impact this could have on local cycling activity and the need for adequate room for storage and movement within a property, a positive effect. The impact on public open space deriving from the requirement to provide 'private amenity space that reflects the size, location, floorspace, type and orientation of the property' could result in larger private gardens at the expense of public open space, an uncertain effect. However, overall the policy is considered to have a generally positive effect.	+2		+2
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	Cumulatively the policy will start a process by which more properties across the district are adaptable, though the policy will have no effect on the existing housing stock. The policy is therefore likely to have the indirect effect of allowing elderly or disabled people the opportunity to remain in their homes, should their needs change. The policy complements DM1 (high quality design) in the delivery of both a high quality urban realm with well-designed housing that meets the needs of local residents.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, as the policy requires a high standard of design which will affect the lifetime of a development. The requirement for adaptable properties will have a changing effect over time on the layout of a house, for example allowing buildings to be altered as circumstances change. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM13 Housing sizes

This policy requires development proposals to balance their benefits against any adverse impacts on protected sites. It aims to provide a degree of protection for important sites that do not have the level of security given to designations such as national parks or AONBs. The policy differs from LP3 as it now includes priority habitats define under the UK and Devon Biodiversity Action Plans.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The minimum standards for dwelling size may have a negative impact as the sizes for some of the properties are slightly larger than the current policy, leading to fewer dwellings per hectare. This would result in a slight increase in the amount of land needed to meet the housing need.	-1	Planning permission will be granted where appropriate mitigation measures have been put in place.	-1
B) Protection and promotion of a quality built and historic environment	Policy requires that the quality of homes meets the Nationally described Space Standard, providing adequate internal space within new dwellings for the number of occupants. A positive impact.	+1		+1
C) Mitigating the effects of climate change	No impact.	0		0
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	The Policy will allow the housing needs of a variety of Mid Devon residents to be met through providing dwellings which provide enough internal floorspace to allow movement.	+1		+1
H) Ensuring community health and	Dwellings would meet the National described Space Standard to ensure houses are designed with sufficient space for activity, privacy, circulation and storage for the expected number of occupants. A positive impact.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
wellbeing				
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	New housing developments will meet the Nationally described Space Standards, allowing residents enough internal space for the number of inhabitants.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent; the policy provides the sizing of dwellings across the District to enable space for privacy, activity, circulation and storage. Once built, dwellings will be permanent.
Spatial extent: (District wide / local)	District wide.

Policy DM14 Town centre development

This policy encourages sustainable growth and regeneration of the district's principal settlements of Tiverton, Cullompton and Crediton. The policy focuses on promoting a variety of town centre uses, whilst resisting development that would harm the vitality and viability of defined primary shopping frontages. The policy has been updated from LP3 to remove Bampton town centre reflecting its proposed new settlement status as a village.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	No impact.	0		0
B) Protection and promotion of a quality built and historic environment	This policy encourages sustainable growth and regeneration of the district's principal settlements of Tiverton, Cullompton and Crediton including their historic cores which could be adversely affected, a minor negative effect.	-1	Development will be supported where it retains or enhances the town centre's historic character, a positive effect.	+2
C) Mitigating the effects of climate change	There are anticipated to be positive impacts of permitting a wide variety of uses within town centres. These are places where there are already a range of uses, facilities and services, which are already used to varying degrees. Promoting further and more varied uses could help regenerate	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	the town centres, ensuring that residents continue to make use of their centralised locations, which can be accessed by sustainable modes of transport, i.e. on foot, or via bus services.			
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	It is considered that providing some housing within town centres can positively contribute towards vitality. Mixed use town centres can have a wider economic benefit through developing the evening economy, whereby residents' access facilities such as restaurants/cinemas after traditional retail closing hours. The policy is therefore striking a balanced approach to maintaining vitality and viability, seeking to encourage a range of uses that support economic growth, an overall positive effect.	+2		+2
F) Supporting retail	Development and change of use of ground floor premises to alternative uses will not be permitted where the primary retail role and character is undermined causing unacceptable fragmentation and isolation of remaining shops, a detrimental effect on the visual character and harm to the vitality and viability of the primary shopping area, a positive effect.	+2		+2
G) Meeting housing needs	This policy may also increase the level of housing across the district. It is felt that providing some housing within town centres can positively contribute towards vitality, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	The town centres of Crediton and Cullompton are already designated as Air Quality Management Areas, whilst Tiverton is at risk of being given the same status. Whilst town centre living is likely to result in increased use of sustainable modes of transport, evidence suggests that residents will still wish to own a vehicle. More residents living in a town centre could have a negative impact on town centre air quality, but overall the concentration of commercial development in town centres is likely to reduce travel to out of centre retail and business premises and reduce the district's residual transport emissions. Overall a neutral effect is anticipated.	0	The policy should be read in the context of other policies in the plan.	0
I) Delivering the necessary	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
infrastructure				

Secondary/cumulative/synergistic effects:	As a direct consequence the policy concentrates town centres uses within town centre boundaries, and therefore indirectly may make residential uses more likely outside of those boundaries. Synergistically this policy along with DM15 (development outside town centres) directs new employment development towards the town centres, i.e. the most sustainable location. The policy will need to be applied alongside DM5 (parking), given that driving to town centres is a popular means of travel, and any new developments will need to take account of parking levels, noting what existing provision is currently in place.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, but will be incremental in nature, and the option to revise town centre boundaries to permit different uses can be revisited in future should circumstances change. Medium to long term - change of use is an incremental process, and the concentration of town centre uses within the primary shopping areas and shopping frontages is likely to be more noticeable in the medium to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM15 Development outside town centres

The policy aims to guide development to the most sustainable locations, e.g. town centres, closer to other shops, services and public transport provision. This policy sets out a sequential approach to approving main town centre uses in the three towns of the district. Retail and leisure development over 500 square metres gross floorspace is required to be accompanied by an impact assessment. The policy has been updated from LP3 to remove Bampton town centre reflecting its new settlement status as a village.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	No impact.	0		0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of	The policy aims to have a positive impact on reducing carbon emissions. By applying a sequential approach which directs development towards	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
climate change	town centres, and away from out of town sites, this should reduce the number of vehicle journeys to less sustainable locations. A positive impact is anticipated.			
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	The variation in impact is dependent on whether new development is located within the town centre (and largely has positive benefits), or as it moves to the edge of, or out of centre, those impacts become less pronounced or can have a negative effect. It is noted that the policy does not stop development taking place, and therefore should result in a positive impact on the amount of employment floorspace for the district. However, where edge-of-centre and out-of-centre land is marketed at a lower price than land within the town centre, there could be considerable pressure to be less than rigorous in applying the sequential test. The perceived benefit would be the creation of additional jobs. Whilst new employment development would create new posts, there could be negative effects on the viability of existing retail or other employment, particularly in town centres. The creation of jobs in one location could reduce jobs in another location, having no net effect on jobs, or degrading the town centre to the point that there is an overall reduction in employment. People may choose to work or shop in new developments if they are out of town, and in doing so, visit town centres much less frequently. The policy aims to minimise such opportunities by applying the sequential approach and requiring an undertaking of an impact assessment which considers the effect on town centre vitality and viability. It will be the Council's responsibility to make balanced judgements based on evidence. An overall positive effect.	+2		+2
F) Supporting retail	National policy requires local authorities to apply a sequential approach to retail development in towns, to ensure the vitality and viability of town centres are not harmed by out-of-centre development. A proportionate, locally set threshold may be applied to retail floorspace proposed outside	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	of town centres, over which an impact assessment should be required. The Mid Devon Retail Study recommends a threshold of 500 square metres gross floorspace. In considering development proposals in edge of centre or out of centre locations, the Council will assess whether there are suitable sites in more sustainable location according to the order of preference and apply a flexible approach where justified. The nature scale, car parking requirement s and market demands of the proposal will be taken into account, a positive effect towards town centre vitality and viability.			
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	No impact.	0		0
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	The policy directs development towards the town centres as the most sustainable locations. Indirect effects of this include the impact on traffic, which would be reduced if not having to access out of centre retail parks, instead making use of accessible sites in town centres with good public transport links. This policy complements Policy DM5 (parking) in this regard. The policy also works synergistically with DM17 (rural shopping) to direct larger retail towards town centres, rather than permit any development in the countryside or on the edge of settlements that may jeopardise town or village centre viability.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, once built these facilities are a permanent fixture of the townscape. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM16 Fronts of shops and business premises

This policy sets a standard for the design of shop fronts and business premises. The three towns of the district are all historic settlements, where the character of the high street is integral to their sense of place. Most of the town centre area for each of the three towns forms part of a conservation area. Over time the significance of a historic character can be diluted if unsympathetic shop and business fronts are permitted.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	No impact.	0		0
B) Protection and promotion of a quality built and historic environment	The policy will have a positive effect on listed buildings and the character of conservation areas. The historic nature of the district's market towns is an element in their tourist appeal. Ensuring the development of appropriate shop fronts should contribute towards maintaining a tourist attraction whilst also helping to deliver the priorities set out in conservation area appraisals. Shop fronts in areas of high architectural or historic value may require bespoke designs and construction in order to meet the criteria of the policy. It is possible that in some cases this could be the determining factor between an operations remaining open or being forced to close. However, taking a less stringent approach could result in the dilution of the character of a shopping area, which in itself could have a wider impact on the vitality of the entire centre. Given the positive and negative effects, an overall positive effect is still considered.	+2		+2
C) Mitigating the effects of climate change	No impact.	0		0
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
F) Supporting retail	The policy will have a positive effect on listed buildings and the character of conservation areas. The historic nature of the district's market towns is an element in their tourist appeal. Ensuring the development of appropriate shop fronts should contribute towards maintaining a tourist attraction whilst also helping to deliver the priorities set out in conservation area appraisals. Shop fronts in areas of high architectural or historic value may require bespoke designs and construction in order to meet the criteria of the policy. It is possible that in some cases this could be the determining factor between an operations remaining open or being forced to close. However, taking a less stringent approach could result in the dilution of the character of a shopping area, which in itself could have a wider impact on the vitality of the entire centre in the long-term. Given the balance between positive and negative effects, an overall slight positive effect is still considered.	+1		+1
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	No impact.	0		0
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	Synergistically the policy support DM25 (Development affecting heritage assets) in that the town centres of the three towns are all conservation areas. The quality of the retail environment in these centres is closely interlinked to their history as market towns and both policies would be applied together in order to preserve the character of the street scene.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, though the effects can be reversed much more simply (relatively), than making changes to buildings that have been constructed. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM17 Rural Shopping

This policy sets the criteria by which retail development can take place within villages, adjacent to villages, or elsewhere in the open countryside. The policy aims to direct rural shopping to the centre of villages, setting stricter criteria for proposals on the edge of settlements or in the countryside.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Landscape impacts could be negative if developing in the countryside.	-2	Criteria within the policy also seek development that would not have an unacceptable adverse impact on the character and appearance of the countryside, an overall neutral effect.	0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	The overall effect of the policy on sustainability is largely determined by the eventual location of development. Locating retail development within villages is likely to have a much less harmful impact in terms of reducing the need for the use of unsustainable modes of transport and promoting walking and cycling. Development at the edge of settlements or in the open countryside is potentially less sustainable, largely being accessed via the private car. The policy sets stricter criteria for rural development that is not within villages in order to minimise potential adverse impacts. An overall slight negative effect.	-1		-1
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	The policy scores positively for increasing overall employment floorspace, particularly within villages, but this should be tempered against the impact this will have on existing retail offers. The impact on the availability of jobs within rural areas should be positive, given the criterion that the development should not impact on the viability of existing facilities.	+2		+2
F) Supporting	The overall effect of the policy on sustainability is largely determined by	+2	The policy requires that the location and	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
retail	the eventual location of development. Locating retail development within villages is likely to have a much less harmful impact in terms of encouraging vitality of rural centres. Development at the edge of settlements or in the open countryside is potentially less sustainable, largely being accessed via the risk of detrimental effect on existing village retail viability. Therefore the policy sets stricter criteria for rural development that is not within villages in order to minimise potential adverse impacts, an overall positive effect.		scale of the development would not harm the vitality and viability of town centre or village shopping facilities.	
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	No impact.	0		0
I) Delivering the necessary infrastructure	Retail development adjacent villages or in the open countryside will put extra pressure on existing infrastructure, a minor negative effect.	-1	Criteria within the policy require development that would not lead to an unacceptable impact on the local road network, an overall neutral effect.	0

Secondary/cumulative/synergistic effects:	Indirectly the policy may reduce traffic in the open countryside or edge of settlement locations, instead directing uses to more central locations depending on the scale of the proposal. The policy supports DM15 (development outside town centres) in directing development towards central locations with better public transport links.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, once development has been directed to a location it becomes a fixed feature of the landscape. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM18 Rural employment development

This policy sets out the criteria by which employment development can take place within the open countryside. The policy permits employment development, but seeks to ensure that it is appropriate in scale for its location and reduces adverse impacts.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This policy sets out the criteria by which employment development can take place within the open countryside. Where a business requires a significant volume of vehicular traffic to visit the site, either through customers and/or deliveries this can result in unacceptable increases in emissions through the increased length of journeys required. Rises in pollutants can be a result, which could impact on biodiversity.	-2	Criteria within the policy state that there should not be an unacceptable adverse impact on the character and appearance of the countryside, an overall slight negative effect.	-1
B) Protection and promotion of a quality built and historic environment	The supporting text of the policy notes that there are various indirect consequences of employment development, such as security fencing, lighting, advertising material, open storage and vehicle parking. This is considered to be a minor negative impact.	-1	To ensure that new employment development contributes to a quality built environment, the policy requires that there is not an unacceptable adverse impact on character, and that the proposal is of an appropriate scale and use for its location.	0
C) Mitigating the effects of climate change	Employment development that is located away from existing settlements can have negative sustainability impacts. Where a business requires a significant volume of vehicular traffic to visit the site, either through customers and/or deliveries this can result in unacceptable increases in emissions through the increased length of journeys required. Rises in pollutants can be a result. Furthermore, for the most rural locations, access to these locations via sustainable modes of transport becomes increasingly unlikely. A slight negative impact has been assumed, given that the impacts can vary depending on the location of the development.	-1	This policy has in place a number of criteria that set standards by which development would have to be in accordance. Transportation impacts are limited by criterion (a), whilst other impacts on character and appearance of the countryside are restricted by criterion (b).	-1
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	This policy sets out the criteria by which employment development can take place within the open countryside supporting new build employment opportunities or the expansion of existing businesses, specifically where there is insufficient suitable sites or premises in the immediate area to meet the needs of the proposal, a positive effect for economic growth.	+2		+2
F) Supporting retail	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	No impact.	0		0
I) Delivering the necessary infrastructure	Employment development that is located away from existing settlements can have negative sustainability impacts. Where a business requires a significant volume of vehicular traffic to visit the site, either through customers and/or deliveries, this could result in a negative effect on road infrastructure. Overall therefore, there could be some negative impacts on road capacity for certain developments, dependent on their location – therefore a slight negative impact has been assumed.	-1	Criteria in the policy state that development should not lead to an unacceptable impact on the road network.	0

Secondary/cumulative/synergistic effects:	Indirectly this policy may lead to a greater number of businesses operating within the countryside. When combined with Policy DM9 (conversion of rural buildings) together this could result in more people both working and potentially living in the countryside. This has an effect on the delivery of services, e.g. waste collection that would need to access new employment sites, increasing the size of collection rounds, increasing carbon emissions and potentially increasing costs for service delivery agencies.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, once development has been directed to a location it becomes a fixed feature of the landscape. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM19 Protection of employment land

This policy sets out Mid Devon's approach to protecting allocated and existing employment sites. The SA Scoping Report highlighted the loss of employment land as being a particularly importance sustainability issue for the district. Out-commuting to larger centres such as Exeter and Taunton is an existing concern, which has negative impacts on transport emissions, pollution and climate change. Employment sites have been allocated in sustainable locations within the Local Plan, to meet an identified shortfall across the district. Therefore, the protection of these sites, in the immediate term is a priority.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	No impact.	0		0
B) Protection and promotion of a quality built and historic environment	In the short term the policy could mean that sites allocated for development remain in their current state. For greenfield sites this is not an issue, but for brownfield sites, particularly where there are dilapidated buildings, the immediate result could be a negative impact on the quality of the overall street scene. For this reason, a minor negative impact has been assumed.	-1		-1
C) Mitigating the effects of climate change	Without the policy it is possible that should these sites be given over to other uses, most likely to housing, out-commuting would likely increase. This would have negative impact on the transportation emissions and climate change, and reduce the district's ability to meet its own needs. The application of this policy will therefore be likely to have a positive effect in terms of mitigating climate change.	+2		+2
D) Safeguarding and minimising resource use	Without a safeguarding policy there could be increased pressure for non-allocated sites to come forward for employment, which could likely be on greenfield land. The policy has a positive effect in respect of minimising the loss of greenfield land.	+2		+2
E) Promoting economic growth and employment	This policy sets out Mid Devon's approach to protecting allocated and existing employment sites, a positive effect for business by ensuring the district has a range of available sites of different sizes. Criteria within the policy allow for alternative uses where there is a suitable range of suitable and available employment sites in the local area, there is no commercial interest in the site which has been marketed for 18 months, a sequential viability test has been applied following unsuccessful marketing, testing mixed use and non-employment uses. Overall, it is considered that the policy will have a positive impact on economic growth.	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	The policy seeks to protect employment land from the change of use to other use. As housing is a likely alternative use for such sites this policy has	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	the potential to provide a limited amount of residential development should other uses prove unlikely to come forward in the long term. However, there needs to be consideration of the appropriateness of the location for housing, as some employment land will be in a location where it is acceptable, but perhaps, housing would not be. Overall, there are possible positive and negative impacts on housing, so a neutral impact has been assumed.			
H) Ensuring community health and wellbeing	No impact.	0		0
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	The redevelopment of existing employment sites is covered by the policy which states this will be permitted where there are not strong economic reasons. Mid Devon has an undersupply of small employment allocations and such sites may be protected from development for alternative uses in line with this policy. In the short term this may result in certain sites in towns not being redeveloped immediately, and potentially being vacant. Vacant sites can attract vandalism, can deteriorate and affect the feel of an area, therefore there are circumstances where a negative indirect impact could be felt. Though a long-term view on the availability of employment land across the district would be taken. Any proposals to redevelop the site would also be considered in light of Policy DM1 (high quality design) as it may be inappropriate to redevelop a site in a predominantly industrial area for residential use as this would result in a poor level of amenity for potential residents.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Temporary in that an employment site may be protected for up to 5 years, but after this period it may be considered for other uses. Short to medium term.
Spatial extent: (District wide / local)	District wide.

Policy DM20 Agricultural development

This policy permits agricultural development where it supports activity on a farming enterprise and is sensitive in its design and location to limit any adverse effects.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The scale of some modern agricultural facilities and their impact on the surrounding landscape could have a negative effect. Development should also not have an unacceptable impact on the environment.	-2	Criteria within the policy however require development to be sensitively located to limit any adverse effects on residents and are well designed respecting the character and appearance of the area. Given the proposed mitigation measures an overall neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	Agricultural development could impact on the character and appearance of the historic environment, a minor negative effect.	-1	The policy requires development to be sensitively located, be well-designed and respectful of character and appearance of the area. Therefore a positive impact is anticipated.	+2
C) Mitigating the effects of climate change	The increased carbon emissions created at all stages of constructed a new building (i.e. at manufacture of materials, transportation, on-site energy usage), a slight negative effect.	-1	The policy states that development should not have an unacceptable adverse impact on the environment, although this would not mitigate all effects.	-1
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	Through being allowed to upgrade to more modern buildings and/or expand their farming enterprise, potentially creating more jobs in the process, the policy will have a positive effect for rural enterprise.	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	Pollution, air quality and transportation impacts on rural roads are also a negative impact, but these have been limited through criteria in the policy. An overall neutral effect is considered.	0		0
I) Delivering the	Agricultural development in the countryside can put additional pressure on	-2	Criteria within the policy seek	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
necessary infrastructure	road infrastructure, a potentially negative effect.		development that will not have an unacceptable traffic impact on the local road network, so the overall effect is considered to be neutral.	

Secondary/cumulative/synergistic effects:	The cumulative development of large modern agricultural buildings can alter a landscape. The policy seeks to limit such cumulative impact by requiring development to respect the character and appearance of an area. Together with Policy DM9 (conversion of rural buildings) the policy could result in some agricultural buildings being developed that could later be converted to other uses, however they would need to demonstrate that they were of substantial and permanent construction and make a positive contribution to an area's character.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, once development has been directed to a location it becomes a fixed feature of the landscape. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM21 Equestrian development

This policy permits equestrian related development within the countryside, providing that it is well integrated with the local landscape, through appropriate location, scale, design and materials. Commercial or large domestic developments are also required to demonstrate that they do not result in an unacceptable increase in traffic.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This policy permits equestrian related buildings within the countryside which are often located in fields away from other development leading to a negative effect on the landscape.	-2	The policy has been written so that any development must be well integrated with the surroundings, and to take account of factors such as location, scale, design and materials, in order to reduce any harmful effects of building within the countryside, an overall slight negative effect is still anticipated.	-1
B) Protection and promotion	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
of a quality built and historic environment				
C) Mitigating the effects of climate change	This policy permits equestrian related development within the countryside with the carbon dioxide emissions related to construction (from extraction/manufacture of materials, transportation and on-site emissions), being a slight negative effect.	-1		-1
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	This policy permits equestrian related development within the countryside with the growth in employment related developments, providing opportunities for economic growth and potentially tourism, a positive effect.	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	Potential negative impacts include pollution from vehicles accessing the site at construction and during operation use is also a concern, though that will be dependent on the scale of the development. Whilst some schemes could potentially have a negative effect, overall a neutral effect has been considered, typically because equestrian developments are largely very small scale.	0		0
I) Delivering the necessary infrastructure	There is the possibility of the potential negative impacts on road safety from riders using local roads, where the bridleway network coverage is poor, a slight negative effect.	-1	The policy specifics that equestrian development must not result in an unacceptable increase in traffic on the local highway network.	-1

Secondary/cumulative/synergistic effects:	Where there are a number of equestrian developments in an area this could cumulatively change the nature of the landscape, particularly in the case of smaller scale domestic size developments.
Temporary/permanent effects:	Permanent, once development has been directed to a location it becomes a fixed feature of the landscape.

Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM22 Tourism and leisure development

This policy sets out the circumstances in which tourist or leisure facility developments are acceptable. Development is permitted inside or adjacent to settlements, and only permitted in the countryside where proposals meet a criterion based approach.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Developing within the open countryside could impact negatively on the landscape.	-2	Developing within the open countryside could impact negatively on the landscape, however to a degree this is mitigated by the policy requirement to respect local character and appearance. Overall a neutral effect is anticipated given the mitigation.	0
B) Protection and promotion of a quality built and historic environment	Development is required to take account of character and appearance, thereby ensuring the promotion of a quality built environment. A sequential approach is taken, whereby development is first directed to nearby settlements, in order to ensure unnecessary building in countryside locations.	0		0
C) Mitigating the effects of climate change	Negative impacts are linked to the transportation and carbon emissions associated with locating new development away from existing settlements. The policy applies a stricter control of tourist development away from settlements, only agreeing proposals where there is not an unacceptable impact on the road network. Despite this provision, any development away from settlements will involve a greater level of carbon emissions from the longer journeys required to access the site. This is in addition to the carbon emitted during the manufacture of materials and construction phases.	-2	The policy criteria seek where possible to involve conversion or replacement of existing buildings reducing the carbon emissions associated with construction, although a minor negative effect is still considered to be experienced.	-1
D) Safeguarding and minimising resource use	Policy supports proposals for new or expanded tourism, visitor or leisure facilities.	0	The policy criteria seek where possible to involve conversion or replacement of existing buildings, a minor positive effect.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
E) Promoting economic growth and employment	In terms of employment, it is noted that the policy supports the development of tourist, visitor and leisure facilities, both in/adjacent to settlements, or where justified, within the open countryside, thereby supporting an increase in employment floorspace in rural areas, and overall across the district. This will also result in an increase in the number of tourist bedspaces provided and thereby should positively impact on tourist numbers across the district, an overall positive effect.	+2		+2
F) Supporting retail	Town centres may also have a mixed outcome from the policy, which will largely be determined by whether the development is located in such a position as to draw focus towards itself and away from an existing centre, thereby impacting on vitality and viability. Given the positive and negative effects an overall neutral effect is considered.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	Access to public transport and local services will depend on the location of the development. If located in or adjacent to a settlement this could have a positive impact on public transport provision, through an additional number of tourists/visitors accessing the facility. However, any development in the open countryside is considerably less likely to be close to public transport provision, and unless it is significant in size and attraction, is unlikely to lead to alterations to existing networks. Given the positive and negative effects an overall neutral effect is considered.	0		0
I) Delivering the necessary infrastructure	Tourism and leisure facilities located in the countryside could increase the amount of traffic on unsuitable roads, a negative effect.	-2	Criteria with the policy require proposals to justify the countryside location, avoiding unacceptable traffic impact on the local road network. Development will also be expected to demonstrate that the need is not being met by existing provision within nearby settlements, an overall slight negative effect.	-1

Secondary/cumulative/synergistic effects:	The policy could work positively with DM9 (conversion of rural buildings) to convert appropriate buildings in the

	countryside to tourist uses. These are lower impact in terms of sustainability than residential developments, such as not needing access to the same level of services, and generating lower carbon emissions because they tend to be less frequently used during autumn/winter, when more fuel would be needed to heat them if lived in all year round. Indirect effects could include the boost to rural incomes, particularly in cases where farm owners wish to diversify their activities, and research has often shown that tourism is traditionally an area considered.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, once development has been directed to a location it becomes a fixed feature of the landscape. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM23 Community facilities

This policy covers a wide range of community facilities including shops, pubs, post offices, village halls, allotments and places of worship. It aims to provide new community facilities where they are accessible and provide a benefit to local residents, whilst only permitting the loss of existing facilities where it can be proven that the facility is not economically viable.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	No impact.	0		0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	No impact.	0		0
D) Safeguarding and minimising resource use	The policy supports proposals for the redevelopment of existing community facilities that enable them to modernise, remain viable and continue to be retained for the benefit of the community will be supported. The reuse of existing buildings is a positive effect towards minimising resources.	+2		+2
E) Promoting	New community facilities in rural areas could increase retail and	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
economic growth and employment	employment opportunities, a slight positive effect.			
F) Supporting retail	New shops in rural areas will increase retail and employment opportunities, a positive effect. New development could be harmful to the viability of existing facilities by acting in competition, e.g. a new edge of village retail offer could reduce footfall in the existing centre. However, such proposals will be judged against this policy, and others on employment set out in the Local Plan, a negative effect on existing retail facilities in towns and smaller settlements. The policy does not support proposals involving the loss of community facilities such as local shops and other important local services to be permitted where this would damage the settlements ability to meet its day to day needs. Overall, a slight positive impact is anticipated.	+1		+1
G) Meeting housing needs	The policy does not support proposals involving the loss of community facilities such as local shops and pubs where the loss would damage the settlements ability to meet its day to day needs. As residential housing is a suitable re-use of these facilities, some small negative impact on housing supply maybe considered.	-1		-1
H) Ensuring community health and wellbeing	The appraisal highlights the positive effects this has in terms of delivering social objectives. In particular the provision of new community facilities in a settlement has positive effects on the viability of settlements. For instance the greater level of services in a settlement, the higher likelihood that it will be served by public transport. Such facilities include schools and colleges, thereby increasing access to education and training. The policy does not support proposals involving the loss of community facilities such as local shops, public houses, allotments, cultural and recreational facilities and other important local services to be permitted where this would damage the settlements ability to meet its day to day needs.	+2		+2
I) Delivering the necessary infrastructure	The policy is supportive of new community facilities that provide a local community benefit where they are easily accessible by the local community and well related to the settlement. New community facilities	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	such as shops, pubs, post offices, village halls, allotments and places of worship will improve the self sufficiency of the settlement and reduce the need to travel, a significant positive effect.			

Secondary/cumulative/synergistic effects:	Retaining community facilities within settlements can increase the vitality and viability of a town/village. Where community facilities do not exist or are lost an indirect effect is likely to take place on the level of local traffic. Where people do not have access to local community facilities they may access others in different settlements; typically they will do this by using a car. The presence of community facilities in a settlement is likely to reduce traffic in that location.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, once facilities are built they are a permanent feature of the landscape. Once community facilities are lost, such changes are unlikely to be reversed. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM24 Protection of local green spaces and recreational land / buildings

This policy provides protection for recreational land and buildings against being used for alternative development. It provides a criterion based approach under which open space, sports or recreational buildings and land can only be redeveloped in certain circumstances. Redevelopment is limited to situations where the existing use is surplus, or where there will be replacement provision in a suitable location, or where the new development is for better sports or recreational provision. The policy expands on LP3 with new criteria that designated areas of Local Green Space will be protected from development unless development meets the criteria set out in national policy for Green Belts.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	No impact.	0		0
B) Protection and promotion of a quality built and historic environment	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	No impact.	0		0
D) Safeguarding and minimising resource use	This policy provides protection for recreational land and buildings against being used for alternative development. It provides a criterion based approach under which open space, sports or recreational buildings and land can only be redeveloped in certain circumstances.	0	The alternative use of open space, sports and recreation buildings and land will only be permitted subject to an assessment which demonstrates that the site is surplus to requirements, the proposed development would be a replacement or an alternative sport and recreation use a positive effect.	+2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	The most likely alternative use for such sites is housing development. However, the plan will allocate sufficient housing to meet local need, so it is not felt that protecting recreational land and buildings will have a detrimental effect on housing provision.	0		0
H) Ensuring community health and wellbeing	There are positive outcomes in terms of the implications for public open space, in that its loss is severely restricted and can only take place where it is surplus or is to be replaced by equivalent or better provision. Development for alternative sports and recreational provision, where the need outweighs the loss. However because the policy does not result in a net increase of public open space, only a slight positive effect is considered.	+1		+1
I) Delivering the necessary infrastructure	Protecting sites of public open space, sports and recreational land is a positive impact, as these are critical elements of local infrastructure.	+3	The alternative use of open space, sports and recreation buildings and land will only be permitted subject to an assessment which demonstrates that the	+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			site is surplus to requirements, the proposed development would be a replacement or an alternative sport and recreation use a positive effect.	

Secondary/cumulative/synergistic effects:	Indirectly, retaining open space, sports and recreational land and buildings is likely to have a positive impact on health and wellbeing by providing places for residents to take part in sport or other outdoor activities. When considered alongside policies within the Local Plan that allocate land for new housing, thereby creating additional demand, and putting pressure on existing facilities; their protection is therefore important to meet the needs of future generations.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, once the loss has taken place this is not likely to be reversible. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM25 Development affecting heritage assets

This policy aims to preserve or enhance the heritage of the district, covering all heritage assets and their settings including; listed buildings, scheduled monuments, conservation areas, historic parks and gardens, archaeological sites and other locally important features. Heritage assets are a vital element of the district's landscape, contributing towards the character of the area, and once lost are gone forever. This policy therefore aims to preserve these elements, to save them for the benefit of future generations.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	No impact.	0		0
B) Protection and promotion of a quality built and historic environment	The policy scores positively against enhancing or improving the understanding of the district's heritage assets. Criteria within the policy include a presumption in favour of preservation in situ, requiring development proposals likely to affect heritage assets and their settings the opportunities to enhance them, only approving proposals that would be likely to substantially harm heritage assets and their setting if	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	substantial public benefits outweigh the harm requirements of paragraph 133 of the NPPF, where development proposals would lead to less than substantial harm, that harm will be weighed against any public benefit, including securing optimum viable use and requiring developers to make a systematic assessment of the impact on setting as set down in the guidance from English Heritage, a significant positive effect.			
C) Mitigating the effects of climate change	No impact.	0		0
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	Local heritage and character is important for tourism, which whilst not playing as large a role as in other parts of the county, is an area that the district wishes to develop. The protection of local heritage ensures this will have a positive effect on efforts to growth the local tourism industry. Many of the town centres of the district have a historic core, and the preservation of their character is therefore a priority, a positive effect.	+2		+2
F) Supporting retail	The sustainability impacts on town centres also scores a mixed outcome. Many of the town centres of the district have a historic core, and the preservation of their character is therefore a priority. However, for retailers in these areas this places limitations on changes they can make to the appearance of their facility, and can add a cost burden to and development they wish to carry out. Given the positive and negative effects an overall neutral effect is considered.	0		0
G) Meeting housing needs	Requiring development proposals likely to affect heritage assets and their settings, including new buildings, alterations, extensions, changes of use and demolitions, to consider their significance, character, setting and local distinctiveness, and the opportunities to enhance them may in a limited number of cases add an additional financial cost to development. A minor negative impact has been assumed as a result.	-1		-1
H) Ensuring	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
community health and wellbeing				
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	The policy provides protection from harm to heritage assets, even if that harm is indirect. Providing appropriate protection to heritage assets should result in no incremental or cumulative loss of historic character or gradual fragmentation of conservation areas across the district.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, provides protection for heritage assets, as once they are lost they are gone forever. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM26 Green infrastructure in major development

This policy aims to ensure positive gains for biodiversity, flood and water management and other elements of green infrastructure are delivered as part of major development schemes. Allowances are made within the policy for alternative arrangements when viability or feasibility is a concern. The policy differs from LP3 in that policy requirement for public open space within housing development has been removed, as it is now separately considered under policy S5 Public open space.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The requirement for a net gain in biodiversity where warranted, means that though biodiversity may be affected by development, overall there will be a positive effect, for example through establishing greater links between wildlife networks or increasing habitat areas. Criteria within the policy seek new green infrastructure such as the creation of native woodland where possible. Landscape quality and character should be positively impacted by the requirement to develop green corridors, new woodland and public open space.	+2		+2
B) Protection	Inclusion of green infrastructure within a development is considered to	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
and promotion of a quality built and historic environment	add positively to its quality.			
C) Mitigating the effects of climate change	Green infrastructure should be incorporated into major sites as flood and water resource management a positive effect on flood risk. Green infrastructure can also act to mitigate the effects of climate change by acting as a 'carbon sink', thereby helping to reduce the overall CO2 levels in the atmosphere, a positive effect.	+2		+2
D) Safeguarding and minimising resource use	Green infrastructure should be incorporated into major sites as flood and water resource management a positive effect towards the use of water as a resource.	+2		+2
E) Promoting economic growth and employment	Integrating green infrastructure within major development does entail an element of additional cost for developers, though this is not a new concept and developers already expect to incorporate green space. It is possible that in some cases this additional requirement may be the element that determines the viability of a particular site. Where evidence demonstrates that meeting these criteria in full would render the development unachievable, the Council will balance the benefits of development against the objectives of this policy.	-1		-1
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Integrating green infrastructure within major development does entail an element of additional cost for developers, though this is not a new concept and developers already expect to incorporate green space. It is possible that in some cases this additional requirement may be the element that determines the viability of a particular site. Where evidence demonstrates that meeting these criteria in full would render the development unachievable, the Council will balance the benefits of development against the objectives of this policy.	-1		-1
H) Ensuring community	The policy should also result in an increase in walking and cycling opportunities, through the creation and/or improvements to public rights	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	of way, a positive effect. There could also be an overall reduction in pollution, e.g. through inclusion of sound buffers to reduce noise or by sustainable urban drainage systems bringing about natural improvements to water quality, a further positive effect.			
I) Delivering the necessary infrastructure	This policy aims to ensure positive gains for biodiversity, public open space and other elements of green infrastructure are delivered as part of major development schemes, a significant positive effect. Where evidence demonstrates that meeting these criteria in full would render the development unachievable, the Council will balance the benefits of development against the objectives of this policy. .	+3		+3

Secondary/cumulative/synergistic effects:	Synergistically the policy works alongside a number of other policies within the Local Plan, impacting positively on district wide sustainability issues. In particular it works jointly with Policy DM1 (high quality design) to provide flood attenuation measures and walking and cycling opportunities. This policy should be considered alongside Policy S5, which sets local standards for the provision of public open space in new development.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent, the policy sets the level of green infrastructure that is delivered per major development proposal, which will be a permanent feature. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM27 Protected landscapes

This policy affirms the value of protected landscapes and the need to safeguard them from inappropriate development. Strict controls are in place to ensure that proposals for development within or affecting these areas take account of the character, appearance, setting and special qualities of the landscape. The policy requires, where possible, these features and biodiversity to be enhanced as a result of the development proposal. Major development within or adjoining the AONB and National Parks will only be permitted in exceptional cases.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Protected landscapes, such as the Blackdown Hills AONB, are a distinctive and highly valued element that contributes to the character of the district. Development proposals within or affecting the Blackdown Hills Area of	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Outstanding Natural beauty, Dartmoor National Park, Exmoor National Park and the North Devon Biosphere Reserve must demonstrate that the a) cultural heritage and the character, appearance, setting and other special qualities of the landscape will be conserved or, where possible enhanced and b) biodiversity will be conserved and enhanced where possible through improved linking of habitats, appropriate landscaping and habitat creation. Against the sustainability framework this policy scores significantly positively for the effect it will have on priority habitats, protected/priority species, wildlife networks and landscape quality and character.			
B) Protection and promotion of a quality built and historic environment	There are also positive effects in terms of cultural heritage, which the policy supports. For example the Dartmoor landscape contains many examples of mining heritage that may be visible from long distances, and the implementation of this policy should ensure that the special qualities of these landscapes, in terms of cultural heritage, are conserved or enhanced.	+2		+2
C) Mitigating the effects of climate change	The policy is likely to restrict opportunities for new renewable/low energy developments within or affecting those landscapes, a negative effect.	-2		-2
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	None of the landscapes referenced in the policy text are in locations where strategic policy focuses development, therefore the effects on economic sustainability are not a major issue, a neutral effect. In contributing towards the district's character and appearance, these landscapes also are a primary factor in the area's attraction for tourism, a positive effect. On balance an overall positive effect.	+2		+2
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	The policy is likely to constrain some opportunities for new housing within or affecting those landscapes, a minor negative effect.	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
H) Ensuring community health and wellbeing	No impact.	0		0
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	Indirectly this policy should have a positive impact on tourism, as the character, appearance and setting of these landscapes is directly linked to their appeal as visitor destinations. Synergistically the policy will work alongside a number of others that require consideration of the character and appearance of the landscape, e.g. Policies DM1 (high quality design), DM2 (renewable and low carbon energy), DM9 (conversion of rural buildings), DM15 (development outside town centres), DM17 (rural shopping), DM20 (agricultural development), DM21 (equestrian development) and DM22 (tourism and leisure development). This is likely to reduce opportunities for new housing or renewable/low energy developments within or affecting those landscapes.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent; it provides protection for the special qualities of designated landscapes, which could be permanently affected by inappropriate development. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM28 Other protected sites

This policy requires development proposals to balance their benefits against any adverse impacts on protected sites. It aims to provide a degree of protection for important sites that do not have the level of security given to designations such as national parks or AONBs. The policy differs from LP3 as it now includes priority habitats define under the UK and Devon Biodiversity Action Plans.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Where development proposals would lead to an individual or cumulative adverse impact on Special Areas of Conservation, Sites of Special Scientific Interest, ancient woodland, Regionally Important Geological Sites, County Wildlife Sites and Local Nature Reserves, or priority habitats defined under	+2	Planning permission will be granted where appropriate mitigation measures have been put in place.	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	the UK and Devon Biodiversity Action Plans, the Council will balance the overall benefits of the proposal against the impact. Impacts on habitats, biodiversity and landscapes are noted as being positive because the criteria are strong enough to afford sufficient protection. In most cases a less harmful location for development could be identified, i.e. where most development is already provided for, such as the towns of the district, or elsewhere in the countryside such as on a farm. Overall the impact of the policy is considered to be positive.			
B) Protection and promotion of a quality built and historic environment	No impact.	0		0
C) Mitigating the effects of climate change	No impact.	0		0
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	The policy could restrict economic growth where development proposals would lead to individual or cumulative adverse impacts, a negative effect. Although the Plan strategy directs strategic growth towards the towns and away from protected sites, an overall neutral effect.	0	Planning permission will be granted where appropriate mitigation measures have been put in place.	0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	The policy could restrict housing growth where development proposals would lead to individual or cumulative adverse impacts, a negative effect. Although the Plan strategy directs strategic growth towards the towns and away from protected sites, an overall neutral effect.	0	Planning permission will be granted where appropriate mitigation measures have been put in place.	0
H) Ensuring community health and	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
wellbeing				
I) Delivering the necessary infrastructure	No impact.	0		0

Secondary/cumulative/synergistic effects:	The cumulative effect of the policy is likely to be noted in directing some development to other locations that are less harmful to protected sites. The scope of the policy covers individual and cumulative adverse impacts on these sites and these are assessed in terms of the significance of the site. The policy provides greater protection for the most significant sites, and cumulative impacts could be felt on those sites of lesser significance. However any development proposals would need to meet the criteria of the policy, which does include demonstrating that other, less harmful locations are not available. The policy recognises that where development proposals would lead to an individual or cumulative impact on Natura 2000 sites, planning permission will be refused unless the proposal complies with criteria a) & b) and the fundamental integrity of the features of the Natura 2000 site would not be affected.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Permanent; the policy provides protection and appropriate mitigation for protected sites, which could be permanently affected by development. Short to long term.
Spatial extent: (District wide / local)	District wide.

Policy DM29 Planning enforcement

This policy sets out the district's approach to taking enforcement action. It confirms that investigations will be undertaken and action taken where it is deemed appropriate. The policy and supporting text notes that unauthorised development can have a detrimental impact on the local environment and can be a source of social tension.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Without effective enforcement action inappropriate development can have an adverse impact on the local environment, biodiversity and landscape character. Such development could affect feel of a landscape, thereby reducing the qualities that make them special. Failure to investigate such developments is likely to encourage further transgressions. This policy sets out the district's approach to taking	+2	Planning permission will only be granted where the benefits of the need for the development outweigh the direct and indirect impact to the protected site and ecosystem, development could be located in an alternative less harmful	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	enforcement action, a positive effect.		location & appropriate mitigation measures have been put in place.	
B) Protection and promotion of a quality built and historic environment	Without effective enforcement action inappropriate development can have an adverse impact on the historic environment through the detrimental impact on heritage assets such as listed buildings, conservation areas and historic parks and gardens. Such development could affect the setting of a heritage asset, thereby reducing the qualities that make them special. Failure to investigate such developments is likely to encourage further transgressions. This policy sets out the district's approach to taking enforcement action, a positive effect.	+2		+2
C) Mitigating the effects of climate change	Without effective enforcement action inappropriate development can have an adverse impact on climate change and flood risk, by avoiding requirements that may have been put in place as part of any planning consent. This policy sets out the district's approach to taking enforcement action, a positive effect.	+2		+2
D) Safeguarding and minimising resource use	No impact.	0		0
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	Without effective enforcement action inappropriate development can have an adverse impact on community health and well-being for example through inappropriately located development and lack of services. This policy sets out the district's approach to taking enforcement action, a positive effect.	+2		+2
I) Delivering the	Without effective enforcement action inappropriate development can	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
necessary infrastructure	have an adverse impact on infrastructure provision, for example through inappropriately located development placing unacceptable pressure on the local highways network. This policy sets out the district's approach to taking enforcement action, a positive effect.			

Secondary/cumulative/synergistic effects:	Cumulatively the impact of failing to tackle inappropriate development could result in a loss of public confidence in the planning system, and could mean an opportunistic increase in attempts at unauthorised development. The policy has indirect implications for the service provision of planning enforcement, requiring a budget contribution that ensures the local authority adheres to the text of the policy in 'investigating unauthorised development' and 'acting proportionately'. A sufficient level of resources will be required to ensure this is undertaken in accordance with the policy.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	The effects of the policy may have both temporary and permanent effects. Planning enforcement may result in unauthorised development being regularised, either through granting of temporary or permanent planning permission; or may result in inappropriate development being addressed through enforcement action, which could mean developments that are currently part of the landscape or streetscape, being permanently removed. Immediate to long term.
Spatial extent: (District wide / local)	District wide.

Mid Devon District Council - Local Plan

Sustainability Appraisal/Strategic Environmental Assessment

Non-technical Summary January 2015

1. Introduction

1.1 The Council has a duty to consider the sustainability of its plans through the Planning and Compulsory Purchase Act 2004 (as amended). It also has to prepare a Strategic Environmental Appraisal (SEA) as a result of requirements contained in the Environmental Assessment of Plans and Programme Regulations 2004. The requirements of both pieces of legislation have been met by the SA, which has been prepared following Government guidance.

1.1 This SA assesses the sustainability of the Local Plan Review Publication draft (2015) which has reviewed the targets, allocations, and policies contained within the current plan to reflect the latest evidence and guidance including the National Planning Policy Framework (2012) and will supersede the following three parts of the existing plan:

- Core Strategy (adopted 2007)
- Allocations and Infrastructure Development Plan Document (adopted 2010)
- Local Plan Part 3: Development Management policies (adopted 2013)

1.2 The SA helps planning authorities to consider the merit of a variety of options to help determine the most sustainable policy decisions. It should be read in conjunction with the Local Plan Review Publication draft (2015) document. The SA highlights potential negative impacts of a plan, thereby providing the opportunities for these effects to be avoided or mitigated. However, the SA cannot ensure that development will be absolutely sustainable in all its aspects. It is possible that in some cases development which is in some respects less sustainable may still have to take place, perhaps where the social and/or economic benefits outweigh environmental impact.

1.3 The SA is an iterative, ongoing process and integral to plan making. During the process of preparing the Local Plan Review, consultation was held in July 2013 on the Scoping Report and SA Scoping Report and in January 2014 on the Options Report and SA Interim Report. Comments received during these two consultations have been taken into account and amendments made to the Local Plan and the SA accordingly.

1.4 The Local Plan sets out a strategy for meeting the needs of the District over the plan period (2013-2033), including for housing and employment. Through the preparation of the plan there has been consideration of what the appropriate level of development should be and different options for delivering growth in light of environmental and other constraints.

2. Sustainability Appraisal Process

2.1 Government guidance advises a number of stages of SA work that need to be carried out as a Local Plan is being prepared:

Stage A: Setting Context and Scope
Stage B: Developing Options and Assessing Effects
Stage C: Preparing the SA Report
Stage D: Consulting on the Plan and the SA
Stage E: Monitoring Implementation of the Plan

2.2 The SA Scoping Report met the requirements of Stage A, assembling the background information, or evidence base, to inform the appraisal process and establishing the framework for the process including setting the objectives against which options would be tested.

2.3 The Interim Report met the requirements of Stage B, reviewing the Strategic Policies, Site Options and Managing Development Options against the sustainability objectives set out in the SA Scoping Report.

2.4 The SA of the Local Plan Publication Draft (2015) focuses on Stages B, C and D of the process and covers the following:

- A summary of the findings of the Scoping Report and Interim Report;
- An assessment of the sustainability of the options and reasonable alternatives considered in the preparation of the Local Plan, including overall housing numbers and site allocations;
- The identification of the potential significant effects resulting from the implementation of the Local Plan; and
- An outline of the proposed monitoring strategy to measure the effects of implementing the Local Plan.

2.5 The SA Report includes the following appendices:

- Appendix 1: Review of Plans and Programmes; and
- Appendix 2: Preferred Policies and Sites and Alternative Policies and Sites.
- Appendix 3: Undeliverable sites

3. Context and Scope

3.1 Mid Devon District Council covers an area of 353 square miles (914 sq. km) in the heartland of Devon. The District had a population of around 77,500 at the time of the 2011 Census and is located roughly equidistant between the Bristol and English Channel coast. The significant urban areas of Exeter (population 117,800) and Taunton (63,000) are just beyond the southern and eastern boundaries of the district respectively. Major east-west transportation routes run through the district, including the M5, A361, A30 and the Great Western Mainline Railway.

3.2 The majority of Mid Devon's settlements are nestled within the folds of the landscape, with many small historic settlements containing thatched cottages and ancient churches. Tiverton is the main town within the district, with the two smaller market towns of Cullompton and Crediton. Natural England has divided England into Natural Character Areas, with Mid Devon

falling into three distinct areas: the Culm, the Devon Redlands and the Blackdowns. The Mid Devon Landscape Character Assessment provides further more localised characterisation. Mid Devon is a district with a rich historic and cultural heritage. There is a wealth of historic buildings and features throughout the district, with over 2680 listings of buildings, bridges and milestones. The district has three historic parks and gardens of national importance – Knightshayes, Bridwell Park and Shobrooke Park, with 16 of local value. There are also 51 Conservation Areas and 49 Scheduled Ancient Monuments as well as a wide range of archaeological remains which are not listed.

3.3 There are a large range of plans, policies and programmes relevant to the production of the Local Plan. These range from the international to local level documents, covering social, economic and environmental issues. From these it has been possible to identify a number of key objectives that have informed the preparation of the SA and Local Plan. Appendix 1 of the SA Report outlines the relevant plans, policies and programmes.

3.4 The existing position in the District in relation to the environment, economy, local community and a number of other matters has been reviewed. The likely evolution of the District without the Local Plan was also considered which helped in the identification of a range of issues and problems and consequently informed the preparation of the sustainability objectives. The following sustainability issues within Mid Devon have been identified:

Key sustainability issues	
Natural Environment	Biodiversity levels are continuing to fall, often dramatically for some species. There is potential for negative impact on the Water Framework Directive status of waterbodies across the district as a result of development.
Built Environment	Some heritage assets are at risk. Some climate change objectives can conflict with the conservation of the area's historic environment, particularly in the installation of renewables technologies that may impact on heritage assets.
Climate Change and Flooding	There is pressure for the installation of renewable energy developments to meet energy shortage however this may conflict with other objectives e.g. built environment. There is an increased risk of flooding as a result of climate change.
Resource Use	There are high levels of best and most versatile land across the district. There may be a conflict between protecting this resource and the need for development across the district. There are limited brownfield sites and therefore pressure to develop primarily on greenfield sites. There is also a need to avoid disposal of waste instead of prioritising re-use, recycling or reduction.
Economic Growth	There are higher levels of out-commuting than in-commuting, especially to Exeter and the potential loss of employment within Mid Devon. There is declining town centre health with town centre regeneration having the potential to be affected by any new out-of-centre development.
Housing	There has been a large population growth within the last decade and demographic household change leading to the need for new

	housing. Houses have not previously been constructed of a sufficient size to meet the needs of the modern family. There is a continued need for affordable housing.
Community Health and Wellbeing	Mid Devon has small areas of social deprivation within Tiverton, Cullompton and some of the remote rural areas (including high levels of child poverty). Access to services and facilities for rural communities has worsened and may continue to do so. There is a low retention of high-attaining school leavers. There are issues around traffic congestion and poor air quality within Crediton and Cullompton.
Infrastructure	There is a high dependency on the car across the district, with levels of car ownership having grown and continuing to grow. Rural self-employment or small business start-up is a growing sector, however this may be constrained by poor broadband speeds.

4. Sustainability Appraisal Methodology

4.1 A framework is used to understand the sustainability effects of the Local Plan as has been developed, consisting of sustainability objectives, each of which include a number of elements against which a policy will be appraised. The framework includes all those factors highlighted within the SA that will affect the sustainability of the Local Plan and is central to the process of sustainability appraisal. The following objectives have been used to test the different options in the Local Plan. The sustainability objectives are:

A) Protection of the natural environment;
B) Protection and promotion of a quality built environment;
C) Mitigating the effects of climate change;
D) Safeguarding and minimising resource use;
E) Promoting economic growth and employment;
F) Supporting retail;
G) Meeting housing needs;
H) Ensuring community health and wellbeing; and
I) Delivering the necessary infrastructure.

4.2 The sustainability objectives proposed are distinctive from the objectives in the Local Plan, though they may in some cases overlap with them. In order to consider the impact of the Local Plan against the sustainability objectives, a scoring system has been used. #

4.3 The use of a scoring system with a range from +3 to -3 highlights the scale of any potential impact. This system enables the opportunity to differentiate between marginal or significant impacts. In some instances where there were technical deficiencies in which specific data was not available at the time of the sustainability appraisal assessments, an uncertain effect has been identified. It is important to note that the scores should not be summed to produce a total score to determine the overall sustainability of a policy or proposal. Mathematical models can lead to an 'artificial certainty' in determining the effect of a policy or proposal where the impacts of issues can be subjective.

4.4 The following table sets out the scoring system that has been used:

Score	*Rationale*
+3	The policy/proposal will have a significant positive contribution towards achieving the objective
+2	The policy/proposal will have a positive impact in contributing towards achieving the objective
+1	The policy/proposal will have a minor positive impact in contributing towards achieving the objective
0	The policy/proposal will have no impact or will have some positive and some negative impacts thereby having a balanced effect in contributing towards achieving the objective
-1	The policy/proposal will have a minor negative impact in contributing towards achieving the objective
-2	The policy/proposal will have a negative impact in contributing towards achieving the objective
-3	The policy/proposal will have a significant negative contribution towards achieving the objective

4.5 In addition to the scoring process, a commentary against each objective has been provided. This sets out a summary of the context of the policy/allocation and a description of the impact against each of the sustainability objectives. Measures for mitigation are also described and scores for post-mitigation are provided, whereby if mitigation measures are applied negative impacts may be reduced. This includes consideration of whether impacts noted are offset by other policies in the plan. Secondary, cumulative, synergistic, temporary, permanent, short, medium or long-term impacts are also reflected.

5. Reasons for selecting / rejecting policy alternatives

5.1 The development of the Local Plan has been an on-going and iterative process with key pieces of evidence influencing the selection and rejection of options.

Amount and Distribution of Development

5.2 The level of growth and development required is a key consideration in the Local Plan. Where the need is identified there is then the consideration as to how this need should be met. In terms of residential development, the SA has given consideration to the implications of different scales of housing development, the approach to distributing it and the locations of sites to provide housing. The first stage was to consider the scale of housing development that should be provided within the District informed by the evolving evidence base. The options assessed focused on whether the amount of development should meet the housing need (7,200 dwellings) or exceed the housing need (8,400 dwellings). A summary of the SA results are provided below.

Amount of Residential Development		
Sustainability objective	***Preferred Meet housing need Scenario (7,200 dwg)***	***Alternative Higher Growth Scenario (8,400 dwg)***
A) Protection of the natural environment	0	-1
B) Protection and promotion of a quality built and historic environment	0	0
C) Mitigating the effects of climate change	0	0
D) Safeguarding and minimising resource use	-2	-3
E) Promoting economic growth and employment	+1	+1
F) Supporting retail	+1	+1
G) Meeting housing needs	+3	+3
H) Ensuring community health and wellbeing	+1	+1
I) Delivering the necessary infrastructure	0	-2

5.3 In summary meeting housing need was the most appropriate option when assessing the overall impact against the sustainability options. Meeting the housing need would meet the economic and social needs of the District, while the environmental impacts would be neutral or balance out than a higher growth scenario which could have a minor negative impact. A higher growth scenario could potentially have negative impact on the delivery of necessary infrastructure, as opposed to the option of meeting housing need having no impact.

5.4 For commercial development, the SA has given consideration to the implications of the different scales of commercial development within the district over the plan period. The scale of commercial development appropriate within the district has been informed by the evidence base. The options focused on whether the amount of development should meet the need (154,000sq m) or exceed the need (310,000sq m). A summary of the results are provided below.

Amount of Commercial Development		
Sustainability objective	***Preferred Meet commercial need Scenario (154,000sq m)***	***Alternative Higher Growth Scenario (310,000sq m)***
A) Protection of the natural environment	0	-1
B) Protection and promotion of a quality built and historic environment	0	0
C) Mitigating the effects of climate change	0	-1
D) Safeguarding and minimising resource use	-1	-3
E) Promoting economic growth and employment	+3	+3
F) Supporting retail	+3	+2
G) Meeting housing needs	0	0
H) Ensuring community health and wellbeing	+2	0
I) Delivering the necessary infrastructure	0	-2

5.5 In light of recent evidence provided by the Employment Land Review (2013) which concluded that the market is unlikely to support the delivery of the current employment land allocations and the shift of policy emphasis in national policy to avoid the long-term protection of sites allocated for employment uses the reduced level of employment development of 154,000sq m is preferred.

5.6 An assessment for the three different options for the distribution of development across the District was completed and the results are outlined below.

Distribution of Development (using preferred option of 7,200 dwellings)			
Sustainability objective	***Preferred New Community (J28 Cullompton)***	***Alternative Town Focus (Hartnoll Farm)***	***Alternative New Community (J27 Willand)***
A) Protection of the natural environment	-1	-1	-2/?
B) Protection and promotion of a quality built and historic environment	0/?	-2/?	0/?
C) Mitigating the effects of climate change	0/?	0/?	0/?
D) Safeguarding and minimising resource use	-3	-3	-3/?
E) Promoting economic growth and employment	+3	+2	+3
F) Supporting retail	+1/?	+2	-3/?
G) Meeting housing needs	+3	+3	+3
H) Ensuring community health and wellbeing	0	+1	0
I) Delivering the necessary infrastructure	+2	+2	+2/?

5.7 The New Community option at Junction 28 preferred by the Local Plan Review is relatively unconstrained in landscape and environmental terms and forms a natural extension to one of Mid Devon's most sustainable settlements. Cullompton has excellent connections to the M5 motorway and the economic benefits this brings in particular with storage and distribution uses. The expansion of Cullompton is both achievable and supported by the local community.

5.8 The alternative option of a town focussed strategy considered that should this option be preferred it would require strategic growth above and beyond Tiverton's Eastern Urban Extension. Given Tiverton's topographical constraints only two directions of growth remain viable for development, firstly north of the A361 and secondly to the east along the valley. The Council has explored land availability to the north and has received confirmation that this is not available. To the east the only option is Hartnoll Farm, which is available and of significant scale to bring forward major housing and employment growth. However the SA identifies a number of significant constraints including a negative effect on the landscape character and concerns of the development merging into Halberton which has its own distinct identify. This option was therefore not preferred.

5.9 The assessment of the third option of developing Junction 27 land adjacent Willand raised potential issues around the impact on the environment, town centre viability, the future working of Hillhead Quarry and the relationship of this development with existing facilities. In considering the range of potentially significant issues with either the commercial or residential elements of development at J27, development at this site is not preferred. The separate assessments of the commercial and residential elements of J27 are reflected in the villages section of the matrices and Appendix 2.

Other strategic policies

5.10 No alternative strategies exist for the Strategic Policies apart from Policies S2, S11, S12 and S13. Alternatives for S2 for the amount and distribution of development are discussed above, therefore Policy S2 preferred and alternative options are not included in the summary table below. Alternatives for S11 and 12 are in regard to the amount of development in Cullompton and Crediton respectively. The Alternative for S13 is for Bampton to remain as a town rather than be classed as a town. The preferred and alternative options are included in the summary table below. The table below gives a summary of the Strategic Policies against the 9 strategic objectives. Full assessments for each Strategic Policy are outlined in Appendix 2 of the full SA Report.

*Separate matrices are provided for 'S2 Amount and Distribution of development' in the relevant section above.

6. Site Allocations

6.1 The selection of site allocations at Tiverton, Cullompton, Crediton and the villages has been an iterative process principally steered by the scale and distribution of development set out in Policy S2: Amount and distribution of development, the availability of deliverable sites, public consultation and the Sustainability Appraisal process.

6.2 All of the sites consulted on in the Local Plan Review: Options Consultation were considered deliverable by the Strategic Housing Land Availability Assessment (SHLAA) panel and the Strategic Commercial Land Availability Assessment (SCLAA) panel and were assessed by the SA. Further sites put forward at the Options Consultation stage were taken to the relevant SHLAA or SCLAA panel. All new sites thought to be deliverable by the SHLAA or SCLAA panel have also been subject to detailed SA. Appendix 3 provides a list of sites considered undeliverable by the panels.

6.3 In general, the SA identified that none of the sites assessed outperformed all the others in all regards. However, there were factors that resulted in some sites being considered to be less suitable, for example, as a result of environmental impacts, flood risk or accessibility. The SA process therefore informed the identification of a number of sites to meet the housing requirement. The following tables show the preferred sites and the alternative sites, in Tiverton, Crediton and Cullompton and the villages. Full assessments and the conclusions on each of the assessed sites are outlined in Appendix 2 of the full SA Report.

Tiverton Housing Sites

7. Managing Development

7.1 The Local Plan Part 3: Development Management Policies (LP3) formed the latest set of adopted development management policies and the baseline position for the Local Plan Review. The Scoping Report consultation recognised that these policies would be newly adopted in the Local Plan and that only minor adjustments would be required to amend policies in response to updates to national policy or guidance and any lessons learnt through implementation. This approach was widely supported through consultation.

7.2 A number of the policies have been revised, and the policy on Waste Management has been deleted at the request of Devon County Council as it is replicated at a higher level within the Devon Waste Plan. A policy on dwelling size is no-longer supported and has been deleted as well.

7.3 There are no strategic alternatives identified for development management policies as policies have been developed to reflect the NPPF position, locally or are written to reflect the Local Plans supporting evidence base. The following table shows the development management policies against the 9 strategic objectives. Full assessments on each of the development management policies are outlined in Appendix 2 of the full SA Report.

Managing Development Policies

8. Monitoring

8.1 Monitoring is important to understand the characteristics of the local area, assess the impact of policies and determine whether the strategy is delivering sustainable development so that the policies can be reviewed as appropriate. The Local Plan contains local indicators and targets to measure the Council's performance against relevant policies and legislation as well as any significant environmental effects. The Local Plan monitoring indicators, relevant policies and targets are located in both the Local Plan and the full SA Report. The monitoring outcomes will be reported annually in the Councils Monitoring Report.

9. Conclusions

9.1 The Sustainability Appraisal has played an integral role in the development on the Local Plan. It has been used to consider the various strategic options and inform the most sustainable approach for the District. The SA has led to the refinement of policies to minimise adverse impacts and has ensured that sustainability issues for the District are addressed. The wording of the specific site policies seeks to ensure that a potential negative effects resulting from the development of sites is addressed at masterplanning and/or planning application stage. Monitoring will be used to assess both the positive and negative effects of implementing the Local Plan.

Appendix 6.9

Mid Devon
DISTRICT COUNCIL

Local Plan Review: Proposed Submission Consultation

(incorporating proposed modifications)

Sustainability Appraisal Update

January 2017

Sustainability Appraisal Update

1. This update to Sustainability Appraisal has been undertaken to take into account comments made at the 2015 Proposed Submission Stage consultation and proposed modifications to the Local Plan Review. The Local Plan Review: Proposed Submission Consultation Sustainability Appraisal (2015) is available on the website at www.middevon.gov.uk/localplanreview and the main Council office, Phoenix House, Tiverton.

Sustainability Appraisal framework objectives

2. A framework is used to understand the sustainability effects of the Local Plan Review as has been developed, consisting of sustainability objectives, each of which include a number of elements against which a policy will be appraised. The framework includes all those factors highlighted within the SA that will affect the sustainability of the Local Plan Review and is central to the process of SA.

Sustainability objective	Elements covered	Impact
A) Protection of the natural environment	Habitats and biodiversity; flora and fauna; protected species; landscape, geodiversity	
B) Protection and promotion of a quality built environment	Heritage assets, including listed buildings, conservation areas, scheduled ancient monuments, registered parks and gardens, locally listed assets, archaeology; design and quality of development	
C) Mitigating the effects of climate change	Reduced flood risk; promotion of low carbon or renewable energy; reductions in carbon emissions; resilience to climate change; walking and cycling provision; low carbon buildings	
D) Safeguarding and minimising resource use	Quality of soils, including contaminated land; water quality, including consideration of water framework directive objectives; water resources; minimisation of waste; impact on best and most versatile agricultural land	
E) Promoting economic growth and employment	Increasing jobs; reducing out-commuting; skills training; growth of rural businesses; tourism provision	
F) Supporting retail	Safeguarding the vitality and viability of town centres; relationship between new development and town centres; supporting viability of shopping facilities in villages	
G) Meeting housing needs	Supply of housing; housing mix; house size; housing affordability; appropriate housing density to location; proximity to services and facilities	
H) Ensuring community health and wellbeing	Community support for proposals; access to open space and recreation; limiting air, noise and light pollution to levels that do not damage human health or natural systems; integrated and sustainable forms of travel including walking, cycling and public transport; social deprivation; safe and secure environments	

I) Delivering the necessary infrastructure	Roads and transportation; schools; health services; community facilities; green infrastructure; telecommunications	

3. The sustainability objectives proposed are distinct from the objectives of the Local Plan Review, though they may in some cases overlap with them. They will provide a way of checking whether the Local Plan Review objectives are the best possible ones for sustainability and will test the social, environmental and economic effects of the plan.

4. In order to consider the impact of the Local Plan Review against the sustainability objectives, a scoring system has been used. A score is provided against each of the objectives to highlight a policy or proposal's sustainability impacts. Collectively, this allows consideration of a policy's overall impact and enables comparison with other policies or proposals. It also enables the consideration of mitigation measures in which a secondary score has been provided if mitigation measures are provided for.

5. It is important to note that the scores should not be summed to produce a total score to determine the overall sustainability of a policy or proposal. Mathematical models can lead to an 'artificial certainty' in determining the effect of a policy or proposal where the impacts of issues can be subjective.

6. The use of a scoring system with a range from +3 to -3 highlights the scale of any potential impact. This system enables the opportunity to differentiate between marginal or significant impacts. The following table sets out the scoring system that has been used:

Score	Rationale
+3	The policy/proposal will have a significant positive contribution towards achieving the objective
+2	The policy/proposal will have a positive impact in contributing towards achieving the objective
+1	The policy/proposal will have a minor positive impact in contributing towards achieving the objective
0	The policy/proposal will have no impact or will have some positive and some negative impacts thereby having a balanced effect in contributing towards achieving the objective
-1	The policy/proposal will have a minor negative impact in contributing towards achieving the objective
-2	The policy/proposal will have a negative impact in contributing towards achieving the objective
-3	The policy/proposal will have a significant negative contribution towards achieving the objective

7. In some instances where there were technical deficiencies in which specific data was not available at the time of the SA assessments, an uncertain effect has been identified which is indicated by a question mark in the scoring box..
8. In addition to the scoring process, a commentary against each objective has been provided. This sets out a summary of the context of the policy/allocation and a description of the impact against each of the sustainability objectives. Measures for mitigation are also described and scores for post-mitigation are provided, whereby if mitigation measures are applied negative impacts may be reduced. This includes consideration of whether impacts noted are offset by other policies in the plan. Secondary, cumulative, synergistic, temporary, permanent, short, medium or long-term impacts are also reflected.
9. General guidance was followed when applying the scoring system to potential allocation sites. A copy of the site allocations appraisal guidance provided on p.192 of the Local Plan Review: Proposed Submission Consultation Sustainability Appraisal (2015) is provided below.

SA framework – appraisal guidance [Allocations]

The following table sets out the general guidance followed when applying the pre-mitigation scoring system to potential allocation sites. In some cases the scoring may differ from this guidance due to site specific context. A cumulative approach was taken when assessing allocation sites within each objective.

Sustainability objective	Elements covered	Pre-Mitigation	Post-Mitigation
A) Protection of the natural environment	Habitats and biodiversity; flora and fauna; protected species; landscape; geodiversity	Neutral impact • If the site is within a town or existing development forms a backdrop of the site • If the site is appropriately screened, for example by being hidden in a fold of a hill Slight negative impact • Small site on the landscape (less 100 dwellings/10,000sqm) • Impact on a Tree Preservation Order • Impact on a protected landscape • Impact on local wildlife • Loss of hedgerows that provide screening • Existing development forms a backdrop but the site is highly visible Negative impact • Large site on the landscape (100 dwellings/10,000sqm +) • Site is highly visible and there is no existing development forming a backdrop	
B) Protection and promotion of a quality built environment	Heritage assets, including listed buildings, conservation areas, scheduled ancient monuments, registered parks and gardens, locally listed assets, archaeology; design and quality of development	Positive impact • Large scale town centre improvements Slight positive impact • Small scale town centre improvements • Good relationship with the settlement Slight negative impact • Impact on Listed Buildings / Conservation Area • Impact on Archaeological potential • Poor relationship with the settlement	

Sustainability objective	Elements covered	Pre-Mitigation	Post-Mitigation
C) Mitigating the effects of climate change	Reduced flood risk; promotion of low carbon or renewable energy; reductions in carbon emissions; walking and cycling provision; low carbon buildings	Slight positive impact • Bus service • Train service Neutral impact • Flood zone 1 • No train services (as limited areas have a train service and therefore it would not necessarily be expected of all areas in Mid Devon) Slight negative impact • Small scale development, potential impact on groundwater (less 100 dwellings/10,000sqm) • No delivery of Sustainable Urban Drainage • Small watercourse • Source Protection Zone • No bus service • Large scale sites due to potential carbon impact Negative impact • Large scale development, potential impact on groundwater (100 dwellings/10,000sqm +) • Flood Zone 2/3	
D) Safeguarding and minimising resource use	Quality of soils, including contaminated land; water quality, including consideration of water framework directive objectives; minimisation of waste; impact on best and most versatile agricultural land	Positive impact • Brownfield land Neutral impact • Small scale grade 4-5 agricultural land Slight negative impact • Large scale grade 4-5 agricultural land • Small scale grade 3 agricultural land • Minerals Consultation Zone Negative impact • Small scale grade 1-2 agricultural land • Large scale grade 3 agricultural land	

Sustainability objective	Elements covered	Pre-Mitigation	Post-Mitigation
		• Contaminated land Significant Negative Impact • Large scale grade 1-2 agricultural land *Small scale = <20ha* *Large scale = >20ha*	
E) Promoting economic growth and employment	Increasing jobs; reducing out-commuting; skills training; growth of rural businesses; tourism provision	Significant positive impact • Large scale commercial development Positive impact • Small scale commercial development Slight positive impact • Large scale residential development Neutral impact • Small scale residential development Negative impact • Small scale loss of commercial development Significant negative impact • Large scale loss of commercial development *Small scale = <100 dwellings / 10,000sqm* *Larger scale = > or equal to 100 dwellings /10,000sqm*	
F) Supporting retail	Safeguarding the vitality and viability of town centres; relationship between new development and town centres	Significant positive impact • Commercial development within a town centre Positive impact • Large scale residential development within a town (> or equal to 100 dwellings) Slight positive impact • Small scale residential development within a town (< 100 dwellings) Neutral impact • Commercial development outside of a town centre • Residential or commercial development within a village	
G) Meeting	Supply of housing;	Significant positive impact	

Sustainability objective	Elements covered	Pre-Mitigation	Post-Mitigation
housing needs	housing mix; house size; housing affordability; appropriate housing density to location; proximity to services and facilities	• Residential large scale development Positive impact • Residential medium scale development Slight positive impact • Residential small scale development Neutral impact • Commercial development *Small scale* = 1-19 dwg *Medium scale* = 20-99 dwg *Large scale = 100+dwg*	
H) Ensuring community health and wellbeing	Community support for proposals; access to open space and recreation; limiting air, noise and light pollution to levels that do not damage human health or natural systems; integrated and sustainable forms of travel including walking, cycling and public transport; social deprivation; safe and secure environments	Positive impact • Provides a community service Slight positive impact • Town sites - walking distance to services Neutral impact • Village sites - designated village Slight negative impact • Pollution • Town sites – beyond walking distance to services • Village sites - not a designated village • Village sites – designated village but large development e.g. 100+ housing • Requires footpath provision • Loss of undesignated recreational land • Impact but not loss of designated open space Negative impact • Loss of a community service • Loss of a designated Local Green Space • Large site which will require new community services and facilities	
I) Delivering	Roads and	Positive impact	

Sustainability objective	Elements covered	Pre-Mitigation	Post-Mitigation
the necessary infrastructure	transportation; schools; health services; community facilities; green infrastructure; telecommunications	• Significant infrastructure e.g. relief road Slight positive impact • Green infrastructure is provided Neutral impact • Access is achievable • School has capacity for additional development Slight negative impact • No infrastructure provided, small site (<100 dwellings/10,000sqm) • School is at capacity, places can be supported through developer contributions • Access is achievable but would require additional works Negative impact • School is at capacity, development proposed would require a new school	

This update to the Sustainability Appraisal is set out as follows:

Annex 1 – Sustainability Appraisal text, methodology and cumulative impact comments (p.10 – 23)

This annex sets out comments from the Local Plan Review Proposed Submission Consultation (2015) on the contents of the sustainability appraisal (SA) text, methodology and cumulative impacts.

Annex 2 – Further reasonable alternatives, new information and comments on the sustainability appraisal of policies and sites (p.24 – 165)

This annex provides a summary of additional reasonable alternatives considered and proposed changes to the sustainability appraisal for example through new information. Minor proposed changes to the Local Plan have not been assessed as these were deemed to not give rise to significant effects.

Annex 3 – Additional Reasonable Alternative Appraisals (p.166 – 337)

This annex provides the full appraisals used to assess reasonable alternatives where deemed necessary as summarised in Annex 2.

Annex 4 – Non technical summary and overall sustainability appraisal of Plan (p.339 – 345)

This annex summarises the main changes made to the Local Plan Review following the appraisal of alternatives set out in Annex 2 and assesses the overall sustainability of the proposed Local Plan.

Annex 1 – Sustainability Appraisal text, methodology and cumulative impact comments

This annex sets out comments from the Local Plan Review Proposed Submission Consultation (2015) on the contents of the sustainability appraisal (SA) text, methodology and cumulative impacts.

Comments on Sustainability Appraisal text

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
1. *'Would like to see reference to NCN3 National Cycle Network Route no.3, Devonshire Heartland Way, the Little Dart Ridge & Valley Walk and the Tarka Trail.'*	Bampton Society (1319)	All public rights of way and cycling and walking routes are already noted with some examples provided. The suggested additional text adds unnecessary detail.
2. *'No evidence as to how the SA has used the Water Framework Directive in the appraisal of the plans policies.'*	Environment Agency (943)	The Water Framework Directive forms part of the sustainability considerations for objective D) Safeguarding and minimising resource use as set out on p.28 of the SA. It has also been considered as part of the Strategic Flood Risk Assessment which has informed the SA.
3. *'Paragraph 2.4 provides little reference to Green Infrastructure.'*	Environment Agency (943)	The comment is noted and the following sentence is proposed as an addition to paragraph 2.4. *'Green infrastructure is a network of multi-functional green space, urban and rural which is capable of delivering a wider range of environmental and quality of life benefits for local communities.*'
4. *'Paragraph 2.30 should include white clawed crayfish as a species of particular note in Mid Devon.'*	Environment Agency (943)	The comment is noted and the following sentence is proposed as an addition to paragraph 2.30. '*Mid Devon is also home to white clawed crayfish. It includes the only two remaining populations of this species in Devon, representing the furthest south-west UK*

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
		distribution.'
5. *'Paragraph 2.58 should consider the SUDs hierarchy and their multi-functional potential.'*	Environment Agency (943)	The comment is noted and the following sentence is proposed as an addition to paragraph 2.58. The proposed change also recognises national policy changes. *'From 6 April 2015, all major development will have to incorporate sustainable drainage to manage surface water runoff, unless demonstrated to be inappropriate. Devon County Council as the Lead Local Flood Authority in the area is the statutory consultee on major planning applications for surface water management. SuDs are designed to mimic the natural drainage of surface water by managing rainfall close to the site where it falls. The SuDs hierarchy should be considered when drawing up options for SuDs in which in general soft landscape SuDs are preferred which also provide other multi-functional potential e.g. green infrastructure.'*
6. *'Paragraph 4.4 refers to 7,200 dwellings as objectively assessed need indicated by the SHMA. SHMA provides a range of figures therefore 7,200 is the 'policy on' figure and not objectively assessed need. Would welcome clarification'.*	Devonshire Homes Ltd c/o Jillings Hutton (1050); Pemberton Hutton Developments c/o Jillings Hutton (5786); Mr R Persey C/O Jillings-Hutton	The 7200 figure reflected the latest SHMA evidence at the time of the proposed submission Local Plan Review publication. An update to the SHMA provides a final objectively assessed housing need (OAN) mid-range figure of 380. As such the OAN of the district has been increased to 7600 in response to this new evidence. An addition of

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
	(4654)	260 dwellings is proposed in response to the proposed allocation of a strategic scale employment site at Junction 27. The figures are therefore proposed to be amended to a total of 7860 dwellings equating to 393 dwellings per annum. Alternatives for the amount of housing development are set out in annex 2.
7. *'SA vision and objectives reflect aspirations of local community, the Council and the ambitions of the NPPF.'*	Pegasus Planning (3678)	Support noted. No changes to the SA required.
Summary		
Additions to the text of the SA are proposed to add context to the report and reflect the most up to date information.		

Comments on the Sustainability Appraisal methodology

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
General methodology comments		
1. A comment was made which argued that the *'scoring of the SA is subjective.'*	Mr Christian & Mr Force & Mr Christian C/O Genesis Town Planning (3780)	The scoring is based on professional planning judgements using the best available evidence at the time of the Sustainability Appraisal. Some level of subjectivity is recognised in the Mid Devon Sustainability Appraisal methodology. However to ensure as much consistency as possible, when scoring proposed site allocations an appraisal guidance was followed as set out on p.191 of the 2015 Proposed Submission Local Plan Review SA.
2. A comment was made which argued that the *'scores in the SA ignore the absolute size of the site alternatives which must distort their impact e.g. larger sites should have a bigger impact than smaller sites.'*	Mr Christian & Mr Force & Mr Christian C/O Genesis Town Planning (3780)	The SA is a tool to understanding the sustainability of a site or proposal. It also provides the opportunity to compare alternatives however context should be considered when interpreting the SA findings. For example, strategic sites were compared against other alternative strategic sites whereas small rural sites were compared against other alternative small rural sites. A single small scale rural site would not be seen as an alternative to a strategic allocation.
3. A comment was made which stated that the *'SA does not comment on site deliverability in terms*	Mr Christian & Mr Force & Mr Christian C/O Genesis	The SA is one tool to assess the sustainable performance of a proposed policy or proposal and does not cover all

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
of phasing and meeting housing need.'	Town Planning (3780)	elements to be considered in deciding preferred policies/proposals. The site options presented in the SA have been through a SHLAA panel which has considered their deliverability in principle. Undeliverable sites are referenced in appendix 3.
4. A comment was made which suggested that the *'the total scores should be summed to produce a total score which will allow comparisons between total scores.'*	Individual (4447)	The aim of the SA is to identify and respond to significant effects on various objectives. As noted in paragraph 3.10, the reason stated for not providing the total scores is because this can lead 'artificial certainty' in determining the effect of a policy or proposal where the impacts of issues can be complex. This is endorsed by the Planning Advisory Service.
5. A comment was made which argued that the *'post-mitigation score is unreliable and unrealistic'.*	Individual (4447)	The aim of the SA is to identify and respond to significant effects on various objectives. Reasons for post-mitigation score are provided under the mitigation heading in the SA tables. Where there is an element of uncertainty this has been recognised through '?' within the table itself, this approach is common in sustainability appraisal work. The scoring is based on professional planning judgements using the best available evidence at the time of the Sustainability Appraisal.
6. Representations were made for the following sites:	Individuals (4447, 5208, 4106, 5234, 4081, 5263,	No change to the SA. It is a regulatory requirement to appraise alternative options.

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
• OHA1 Land at Blundells Road, Halberton • OMO1 Tatepath Farm, Morchard Bishop' • OMO2 Church Street, Morchard Bishop (locally known as the Gurneys) In which the representations supported the exclusion of the site but request it be removed from the SA as an alternative option.	4117, 5295, 3971, 4082, 4416, 4459, 5642, 5641, 4093, 5604, 5605, 5606, 5607, 5608, 4474, 4473, 5609, 4476, 4108, 4111, 4112, 5603, 4460, 4152, 4110, 4481, 4475, 5599, 4101, 4363, 5594, 4105, 5597, 5598, 5600, 4471, 4472, 5592, 5593, 4077, 4074, 5595, 5596, 5601, 6063, 4212, 4215, 4681, 4682, 4075, 5590, 5591, 5586, 5587, 5588, 5589, 4076, 5358, 4356)	
7. A question was raised regarding the amendment to the scoring of the objectives in the proposed submission SA when compared to the options stage SA. Specific comments made to this regard on objectives A, D and H' of OHA1 Halberton, Land at Blundells Road.	Individual (4447)	Comments were invited on the sustainability appraisal at the Options consultation stage 2014. The SA is an iterative process which is updated as new evidence arises. Amendments were made to the SA to respond to the representations accordingly. Comments included local knowledge of existing sites. Comments were also made on the need for consistent scoring throughout the SA based on similar parameters e.g. scoring similar locations equally

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
		across Mid Devon. As such the methodology was strengthened by setting out guidance for appraising site allocations (p.192) to ensure consistent scoring throughout the amended SA. This has resulted to amendments to some commentaries and scoring throughout the SA.
Policy specific methodology comments		
S2 Amount and Distribution of development		
8. A comment was made which noted that *'two alternative options for villages were considered as 1,600 and 1,040 scenarios. The Local Plan Review considers 720 with no justification.'*	Devonshire Homes Ltd c/o Jillings Hutton (1050); Pemberton Hutton Developments c/o Jillings Hutton (5786); Mr R Persey C/O Jillings-Hutton (4654)	The two alternative scenarios in the options Local Plan Review consultation were based on the most recent available data at that time which was a figure greater than the objectively assessed need. A SHMA update provided an interim figure of 7,200 dwellings to meet the objectively assessed need (OAN). As a result the total housing need figure was reduced from 8,400 to 7,200 dwellings in the proposed submission report with the rural distribution reduced proportionately in line with the reduction in total figure. Along with this change, further site specific evidence across Mid Devon District resulted in amended distribution figures to reflect the most recent evidence available. The SHMA figure has been further amended in a final iteration of the document in which a concluded 7,600 dwellings has been considered for Mid

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
		Devon, an additional 260 dwellings is proposed in response to the strategic employment allocation at Junction 27 with amended distribution figures to follow.
CU14 Ware Park and Footlands, CU15 Land at Exeter Road & CU21 Land at Colebrook Contingency Site		
9. A comment was made which noted that they *'object to allocation [CU14] as sustainability appraisal scoring for site is less than CU21 Colebrook and therefore this site should be contingency instead, with CU21 as full allocation….SA and allocated sites at Cullompton do not correlate. Total scores of CU14 and CU15 are less positive than CU21'.*	Mr Christian & Mr Force c/o Genesis Town Planning (3780)	As set out on p.28 para 3.10 of the SA scores should not be summed to produce a total score to determine the overall sustainability of a policy or proposal. Mathematical models can lead to an 'artificial certainty' in determining the effect of a policy or proposal where the impacts of issues can be complex. This is endorsed by the Planning Advisory Service. It is also important to note that the SA is one tool for decision making and does not cover all elements to be considered in deciding preferred policies/proposals. Bearing this in mind, CU21 is of an appropriate scale required to be effective as a contingency site, it scores more positively on objective E) promoting economic growth and employment and G) meeting housing needs predominantly due to its size. CU14 and CU15 are not comparable to CU21 in size in which they are not of a scale which would provide the quantum of development required to be effective as a contingency site. CU21 is still considered deliverable hence its proposed allocation as a

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
		contingency site but it is not allocated as one of the main sites for Cullompton as other allocations are strategically preferable.
CF2 Land adjacent School and OCF2 Landboat Farm		
10. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Disagree with comparison of site OCF2 'Landboat Farm' with CF2 'Land adj school'. States SA should be comparing new sites outside the current settlement boundary, and exclude any parts of sites within the boundary'.*	Garside Planning Services (3645)	The SA appraises the potential benefits and impacts of all sites put forward for development. It would be inappropriate to exclude a part of a site on the basis that it lies within the settlement limit as this would lead to an incomplete analysis of benefits/impacts, and preclude opportunities to recommend mitigation. Such omission could also potentially leave the local authority at risk of not fulfilling the regulatory requirements set by the EU Strategic Environment Assessment directive to fully assess the impact of plans and proposals. No change to the SA is proposed.
Summary		
It is considered that none of the comments made would result in any changes to the Sustainability Appraisal for reasons set out in the 'Impact on the Sustainability Appraisal' column above.		

Comments on secondary/ cumulative/ synergistic effects

The comments in the table below are considered to update the cumulative effects noted in appendix 2 and 3 of the Local Plan Review Proposed Submission sustainability appraisal (2015).

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
Tiverton		
1. A comment was made on strategic policy S10 Tiverton which stated the following: *'support strategy in general, however further work is needed on the transport evidence in relation to the SRN. There should be reference to the cumulative impact of development on the M5'.*	Highways England (1172)	The cumulative impact of developing at Tiverton was previously identified in the SA in the cumulative/secondary/synergistic effects section of the proposed allocations in terms of identifying the potential to impact upon traffic. However the comment made is specific to J27, in response to this additional detail is provided to the supporting text of the plan under policy S10.
OTIV2 Hartnoll Farm		
2. A comment was made which stated the following: *'object to exclusion – site could provide substantial proportion of Tiverton and district's housing need. New junction designed to accommodate up to 2000 dwellings'.* While it may be possible for the proposed grade	Waddeton Park Ltd (3815) and officer comment.	The Blundells School site is proposed to be allocated in the Local Plan Review as a modification to the plan for 200 dwellings. The provision of a junction on Heathcoat Way and a safeguarded road route through the site to serve as a future second strategic road access for development at Tiverton eastern urban extension is proposed in the draft policy. This enables mitigation for any future cumulative

separated junction onto the A361 to accommodate up to 2000 dwellings, the allocation commented on would take the number of new dwellings to the East of Tiverton to well in excess of 2000. This would necessitate the relief road behind Blundells School. Although this need was recognised in previous iterations of the SA, it did not clearly set out that the requirement for this relief road would be due to this cumulative effect of additional development in excess of 2000 dwellings to the East of Tiverton.		impacts of potential additional development to the East of Tiverton. Without the relief road further allocation which cumulatively would result in excess of 2000 dwellings to the East of Tiverton would lead to unacceptable impacts on Blundells Road and the village of Halberton.
Cullompton		
3. The SA recognised the potential cumulative impact on the road network of developing at Cullompton. Some policies had reflected this impact through additional criterion in policy. Since the Local Plan Proposed Submission (2015) the highway authority has provided more information regarding the cumulative impact on the highway network.	Officer comment	In response to this various policies have included additional criterion to reflect this cumulative impact including CU6 North West Cullompton phasing, CU13 Knowle Lane, CU14 Ware Park and Footlands, CU15 Land at Exeter Road, CU16 Cumming Nursery, CU17 Week Farm and CU18 Venn Farm.
Crediton		
4. The SA did not previously fully consider the impact on Crediton high street through	Officer comment	The cumulative impact of developing to the west of the town was not previously clearly identified in the SA in

developing on the west of the town. Developing on the west would increase traffic through the high street as most likely destinations for journeys are either Exeter or Tiverton. Whilst some mitigation could be provided, the impact of developing sites on the east side of the town is likely to be much lesser than any on the west.		which incremental development in the west of the town will have a cumulative negative effect on the traffic through the high street with a secondary impact on air quality. This would impact the scores for the preferred alternative CRE9 Alexandra Close, alternative OCRE10 Westwood Farm and OCRE11 Land at Chapel Down Farm given their context to the west of the town. The amendments to scoring for these alternatives are discussed in annex 2.
CRE5 Pedlerspool and CRE7 Stonewall Lane		
5. A representation was made during the Local Plan Review noted the need *to 'cumulatively assess the transport impacts of CRE5 and CRE7'.*	MJ Gleeson c/o Bell Cornwell LLP (3775)	The plan already recognises the potential for cumulative transport impacts in CRE5 however this is not set out clearly in CRE7, therefore in response to this representation a change to the Plan has been proposed to include in the supporting text of CRE7 the need for a Transport Assessment, which comprehensively assesses the transport issues related to development of the site, taking into account the potential cumulative impact of nearby allocations.
OJ27 Commercial Development		
6. The SA did not previously fully consider the secondary effect of requiring additional housing to be allocated in response to the creation of	Officer comment	OJ27 Commercial Development would require additional housing to be allocated in response to the creation of additional jobs. This should be considered alongside any

additional jobs as set out in para 159. of the NPPF and supporting paragraph in the NPPG.		additional commercial development proposed at OJ27.
7. A Habitat Regulations Assessment update of the Local Plan Review including the Junction 27 option is required.	Officer comment	A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.
Summary		
The comments set out in this table identify cumulative/secondary/synergistic effects which were not previously clearly set out in the Proposed Submission SA. The impacts of note include the addition of a criterion in the proposed allocation Blundells School to enable mitigation for any potential future development to the East of Tiverton. The cumulative negative effect on traffic through the high street in Crediton and secondary effect on air quality from incremental development in the west of the town. The need for a transport assessment associated with CRE7 Stonewall Lane to take account of the potential cumulative impact of nearby allocations and the secondary impact of allocating OJ27 Commercial Development in which additional housing will be required in response to the creation of additional jobs.		

Annex 2 – Further reasonable alternatives, new information and comments on the sustainability appraisal of policies and sites

The level of detail provided in the updated assessment of reasonable alternatives, new information and comments on the sustainability appraisal of policies and sites is correlated with the significance of the alternative proposed. A breakdown of the types of alternatives considered in this annex along with the level of detail of the updated assessment that might be expected is provided below.

Alternatives considered	Full Appraisal	Summary Matrix
Distinct alternatives: where alternatives are distinct from the preferred policy. Full appraisals are provided in annex 3. A summary matrix is also provided under each policy where relevant.	✓	✓
Indistinct alternatives: where alternatives are indistinct. Full appraisals are not provided unless three or more objectives of the SA are proposed to be amended. A summary matrix is provided under each policy where relevant.	✓/×	✓
New information: where new information is presented this has been discussed in the tables throughout this annex. The detail of the updated SA assessment will depend on the significance of the new information proposed.	✓/×	✓
Deleted Policies: where policies are proposed to be deleted, the impact on the sustainability of the Plan is discussed within the relevant table in this annex.	×	×
SA amendments: all comments made on the SA with regard to the Local Plan Review Proposed Submission policies are discussed in this annex.		
• Where no change to the SA is proposed a full appraisal/summary matrix has not been provided. The reason for no change is fully discussed in the tables in this annex.	×	×
• Where there are two or fewer changes proposed to the post-mitigation score, summary matrices are provided. Full appraisals are not provided; reasons for the changes to the SA are fully discussed within the tables in this annex.	×	✓
• Where three or more amendments are proposed to the post-mitigation score a summary of the changes are discussed within the tables in this annex along with a summary matrix. Full appraisals are provided in annex 3 which set out the impact in more detail.	✓	✓

Examples of alternatives that are not considered in this annex are provided below:

Alternatives not considered
Previous alternatives: alternatives that have been previously considered as part of previous iterations of the SA have not been reconsidered in this annex unless amendments have been suggested for that alternative.
Minor alternatives: alternatives proposed which would not give rise to any impact on the SA scoring.
Non-specific alternatives: alternatives suggested which are insufficiently detailed to assess the impact on the SA.
Other SA amendments: suggested changes to the SA text, methodology, secondary/ cumulative/ synergistic impacts are discussed in annex 1.
Unreasonable alternatives: where the suggested change would not be possible or would be unreasonable to implement.

Strategic Policies

S1 Sustainable Development Principles

Two comments under S1 are considered to give rise to an alternative to be considered in this annex. Although comments were made on S1, both comments would result in a rural focussed alternative option for the distribution of development which is considered under S2 in this annex.

S2 Amount and Distribution of development

Reasonable Alternative Proposed (Amount Housing)	Impact on the Sustainability Appraisal
A variety of alternatives have been proposed by representations for housing development these range from 7400 and 8860. To enable meaningful comparisons to be made the following alternatives of 7200, 7600, 8000, 8400, 8800 have been considered with full assessments set out in annex 3 and summary matrices provided below. An alternative of 7860 has also been considered which is the Council's preferred option for the amount of housing development and is proposed as a modification to the plan. This is to reflect the updated evidence to meet the objectively assessed need of 7600 in the District and the preferred strategy of allocating commercial development at J27, of which an addition of 260 dwellings is proposed to reflect the projected job growth as a result of the commercial proposals at J27.	
1. A lower growth alternative of 7200.	This was previously appraised as part of the Proposed Submission Local Plan in which this figure was believed to meet the objectively assessed need. New evidence has demonstrated that this figure would not meet this need; as such this would result in a lower growth scenario. Whilst this scenario would meet a large proportion of the housing needs of the district it would not meet the whole need and therefore a positive rather than significant positive impact is considered for objective G) meeting housing needs. All other objectives considered in the SA score the same as the 'meet the

	housing need' alternative of 7600.
2. A meet the housing need alternative of 7600.	This alternative scores more positively on all objectives in comparison to other alternatives. It has the same scoring as the previous preferred alternative 7200 in the Proposed Submission SA as this was previously thought to meet the objectively assessed need. The scoring of the 7200 alternative now scores lower for objective G) meeting housing needs as explained above.
3. Preferred alternative: A meet the housing need alternative 7600 with Junction 27 additional housing requirements of 260, a total of 7860.	The sustainability of this alternative is considered to fall between the alternatives 7600 and 8000. The proposed change to the housing amount is not considered significant enough to enable a meaningful comparison; as such it is considered that the alternative of 7860 will score the same as alternative 2. Given the similarities of this alternative to 7600, no additional full appraisal has been provided in annex 3. This alternative meets the objectively assessed housing needs and does not score lower in objective I) (as reflected for the intermediate higher growth alternative of 8000) because the proposed additional sites for development have been set out at Blundells School, Tiverton and Higher Town, Sampford Peverell respectfully and it is considered that infrastructure required for the additional sites can be provided in-step with development. For completeness although this alternative scores the same as alternative 2 a full appraisal is provided in annex 3.
4. An intermediate higher growth alternative of 8000.	This alternative has a lower score in comparison to the preferred alternative for objective I) delivering the necessary infrastructure in which it may be more difficult to distribute development between the

	towns while delivering the necessary infrastructure in-step.
5. A higher growth alternative of 8400.	In comparison to the preferred alternative this scenario would result in a slight negative effect for objective A) protection of the natural environment where a higher growth scenario may be more difficult to distribute across the district whilst avoiding environmental impacts on the landscape. A significant negative effect for objective D) safeguarding and minimising resource use in which this option is likely to require further greenfield developments and a negative effect for objective I) delivering the necessary infrastructure where a higher growth scenario is also likely to be more difficult to distribute across the district while delivering the necessary infrastructure.
6. An elevated higher growth alternative of 8800.	In comparison to the preferred alternative, this scenario would result in a negative effect for objective A) protection of the natural environment where a higher growth scenario may be more difficult to distribute across the district whilst avoiding environmental impacts on the landscape and in this scenario the additional development would be of an equivalent scale to a strategic allocation. A significant negative effect for objective D) safeguarding and minimising resource use in which this option is likely to require further greenfield developments and a negative effect for objective I) delivering the necessary infrastructure where a higher growth scenario is also likely to be more difficult to distribute across the district while delivering the necessary infrastructure.
Reasonable Alternative Proposed (Distribution Housing)	
7. A rural distribution alternative.	A rural distribution alternative has appraised with a full appraisal

	A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'the policy should reduce the Cullompton target to 1,500 dwellings and increase the Rural Areas target to 2,820 dwellings.'* A comment was also made on the SA which commented that the SA *'should have a distribution scenario of a wider distribution to the larger villages.'* In response to these representations a rural distribution alternative has been appraised. An alternative to *'increase the amount of development at Crediton and rural areas whilst reducing the amount in Cullompton as major development sites are risky'* was also suggested. To respond to this comment, an alternative of removing East Cullompton leading to a redistribution of 2100 dwellings in Crediton and across rural areas was considered. As the maximum capacity of Crediton is 1047 based on the highest capacity of all potential allocation sites submitted through the SHLAA this would only provide an addition of 327 dwellings at Crediton with the remainder distributed in rural areas. Therefore this scenario would result in the same SA outcomes as the 'rural distribution' alternative and therefore has not been appraised as a separate alternative.	provided in annex 3 and a summary matrix provided below. The findings of this SA show that this would lead to greater negative effects in objectives: A) natural environment, B) the built and historic environment, C) climate change, E) promoting economic growth and employment, H) ensuring community health and wellbeing and I) delivering the necessary infrastructure. A slightly less negative score was considered for objective D) safeguarding and minimising resource use as the majority of the village allocations were identified as grade 3 agricultural land rather than grade 1 or 2, although a negative effect overall remains for this objective.
8.	A Tiverton and Crediton focussed alternative. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'the distribution*	A Tiverton and Crediton focussed alternative has appraised with a full appraisal provided in annex 3 and a summary matrix provided below. In comparison to the preferred option, this would result in a greater

	should be altered to reduce Cullompton provision to reflect the removal of the East Cullompton proposal and Crediton should be increased to reflect its size. Difficulties of bringing forward sites such as the East Cullompton one are well known. Crediton has scope for additional development'. The removal of East Cullompton implies a target of 1500 at Cullompton and 2820 at Crediton which is not a reasonable alternative as there is not the quantum of sites available in Crediton to deliver this option. The maximum capacity for Crediton based on taking the highest capacity of all potential allocation sites submitted through the SHLAA is 1047 dwellings. As an alternative to the rural distribution alternative (discussed above), a Tiverton and Crediton focussed alternative with greater development in rural areas has been considered.	negative impact in objectives: A) natural environment, B) built and historic environment, E) promoting economic growth and employment. The option scores slightly higher in F) supporting retail and H) ensuring community health and wellbeing.
9.	A Town focussed alternative. A representation was made during the Local Plan Review Proposed Submission consultation and suggested the following distributions: *Tiverton – 3510* *Cullompton – 2730* *Crediton – 780* *Rural Areas – 780* *Total – 7800* The distribution of this representation is very similar to that	No change.

previously appraised under the 'town focus' option albeit with different total development proposed. Alternatives for the total development have been considered separately in this table with a summary matrix provided below. The original summary matrix for the 'town focus' alternative has also been provided below for information.	
Reasonable Alternative Proposed (Amount Commercial)	
10. Higher Growth Scenario including J27 option With the addition of a strategic scale employment site at junction 27 on the M5 motorway the higher commercial growth scenario has been reappraised. This scenario takes into account the opportunities provided by the Junction 27 option. A full appraisal the higher growth scenario including the J27 option is provided in annex 3. The site specific appraisal of the junction 27 option is provided in the allocation section of this annex. No other alternatives are available and deliverable that could accommodate the quantum development proposed.	Given this option is intricately linked with the proposed Junction 27 allocation modifications option, the scoring for this alternative is the almost identical as the Junction 27 site appraisal with the exception of objective H) ensuring community health and wellbeing as well considering the policy as a whole, the option enhances existing policy as it broadens the potential use classes including development for healthcare, education and public facilities, overall it therefore scores positively.
New Information	
11. New information was made available during the consultation on the Local Plan Review Proposed Submission. Upon review, it is proposed to increase the objectively assessed housing need to 380 per year to reflect the advice in the SHMA.	As noted above, this alternative to 'meet the housing need' would result in the same SA scores as previously anticipated for the previously considered OAN 7200. The previously considered OAN of 7200 now scores lower in objective G) meeting housing needs, as whilst this scenario would meet a large proportion of the housing needs of the district it would not meet the whole need, and therefore

	a positive rather than a significant positive impact is considered for this objective.
12. Additional evidence since the previous SA was commissioned specifically to examine the potential demographic implications of the proposed strategic scale employment site at junction 27 on the M5 motorway. The results suggest a need of an additional 260 dwellings within Mid Devon District Council over the plan period.	In response to this new information a meet the housing need alternative of 7600 with an additional 260 in response to the inclusion of a strategic scale employment site at junction 27 of the m5 has been considered. This would result in an alternative of 7860 dwellings which has been considered above.
Sustainability Appraisal Comments	
13. A representation was made during the Local Plan Review Proposed Submission consultation and commented that *'8,400 dwellings shouldn't trigger a slight negative effect on the environment when 7,200 dwellings have a neutral effect'.* Devonshire Homes Ltd c/o Jillings Hutton (1050); Pemberton Hutton Developments c/o Jillings Hutton (5786); Messrs Persey and Harding c/o Jillings-Hutton (4654)	The scores are in the context of the policy. In this case, it is based on development figures. To enable meaningful comparison between the options for policy S2 it was judged that when comparing 7,200 dwellings with 8,400 dwellings in terms of overall growth of the district, the provision of an addition of 1,200 dwellings would have a slightly more negative effect. No change to the SA is proposed.
14. A representation was made during the Local Plan Review Proposed Submission consultation and commented that *'Benefits of 'supporting retail' in having more houses and therefore more spending power is not highlighted in relation to higher growth scenario'.* Devonshire Homes Ltd c/o Jillings Hutton (1050); Pemberton Hutton Developments c/o Jillings Hutton (5786); Messrs Persey and Harding c/o Jillings-Hutton (4654)	It was judged that as the impact on supporting retail would be a secondary impact, the significance of increasing dwellings in relation to a higher growth scenario in comparison to the preferred scenario did not warrant an increased retail score. However it has been recognised for all alternatives that the overall provision of 7200 dwellings and above would have a slight positive effect on objective F) supporting retail, as this would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres. No change to the SA is proposed.
15. A representation was made during the Local Plan Review Proposed Submission consultation and commented that they	Comment is noted, no change to the SA is proposed.

'Support the conclusions of the SA that the most appropriate growth strategy is to focus development in sustainable urban locations rather than seeking growth in larger villages'. Pegasus Planning (3678)	
16. A representation was made during the Local Plan Review Proposed Submission consultation and commented that *'The SA recognises the level of supply is not anticipated to meet the need for affordable housing. Therefore deliverable sites should be seriously considered'.* Devonshire Homes Ltd c/o Jillings Hutton (1050); Messrs Persey and Harding c/o Jillings-Hutton (4654)	Comment on the proposed submission SA has been noted. A change to the Plan is proposed in which the overall target is proposed to be increased to 7,860, which would yield 110 affordable dwellings per year at 28%. The SHMA forecasts a need of 124 affordable dwellings per year, which it is accepted should be reflected in the local plan text. It is highly likely that the Council and its housing association partners will be able to provide at least 20 additional affordable dwellings per year through non-planning actions such as investment from the HCA, exceptions sites and delivery on council owned land and meet the affordable housing need. Alternatives for the amount of residential development are discussed above.
17. A representation was made during the Local Plan Review Proposed Submission consultation and commented that 'Two alternative options for villages were considered as 1,600 and 1,040 scenarios. The Local Plan Review considers 720 with no justification'. Devonshire Homes Ltd c/o Jillings Hutton (1050); Pemberton Hutton Developments c/o Jillings Hutton (5786); Messrs Persey and Harding c/o Jillings-Hutton (4654)	The total housing figure in the 'options Local Plan Review consultation' was based on the most recent available data at that time. More recent evidence at the time of publication resulted in a reduced total housing figure of 8,400 to 7,200 dwellings. The distribution to rural areas was also reduced proportionately relative to the total housing figures along with further site specific evidence which affected the distribution figures. The SHMA figure has been further amended in a final iteration of the document in which a concluded 7,600 dwellings have been considered for Mid Devon with amended distribution figures to follow. No additional changes to the

	SA are proposed.
Changes to the Plan	
Amount of development (housing) Alternative 3 is suggested as a modification to the plan which would result in a 7,860 dwelling target. This alternative is preferred as new information in the finalised SHMA report which became available during the consultation on the Local Plan Review Proposed Submission resulted in new evidence, providing a final objectively assessed housing need (OAN) 380 per year. It is therefore agreed the target will need to be increased to 7,600 to meet the OAN of the district. As a result, the previously proposed approach of 7,200 dwellings over the plan period is no longer preferred as this approach would not meet the OAN of the district. In response to the proposed allocation of a strategic scale employment site at Junction 27, an additional 260 dwellings are required within Mid Devon over the plan period. As such a total of 7,860 dwellings is preferred. All other alternatives proposed recommend some form of higher growth scenario. All other higher growth scenarios would result in reduced scoring in the SA. At the intermediate higher growth level there is likely to be a lower score on objective I) delivering the necessary infrastructure. At the higher and elevated growth levels greater negative impacts are felt on objectives: A) natural environment, D) safeguarding and minimising resource use as well as I) delivering the necessary infrastructure. Furthermore arguments provided in representations for the higher growth scenarios are based on the opinion that the higher figures proposed are the accurate OAN, this is not agreed. 7,600 is the objectively assessed need as demonstrated by the updated SHMA evidence. The housing implications of the development of a strategic scale employment site at junction 27 on the M5 motorway has been considered in the August 2016 'Mid Devon Scenarios Policy-on' report of which the results suggest a need of an additional 260 dwellings within Mid Devon District Council over the plan period. All other higher growth scenarios are not supported by evidence, or considered beneficial and therefore are not preferred. Distribution of development None of the proposed alternatives are favoured. The rural distribution alternative would lead to greater negative impacts on almost all sustainability appraisal objectives, would result in unsustainable travel patterns and would be contrary to NPPF advice (para 30). Other alternatives consider scenarios which provide a greater focus in Crediton. One option results in a Crediton and Tiverton focussed scenario.	

Implicit in this scenario is the strategic growth to the east of Tiverton in addition to the Tiverton Eastern Urban Extension along with additional growth in rural areas. This alternative would result in a greater negative impact on the objectives: A) natural environment, B) built and historic environment and E) promoting economic growth and employment. It is therefore considered that the alternatives proposed would be less sustainable options and therefore not preferred.

Amount of development (commercial)

Alternative 10 is proposed as a modification to the plan. The option has a number of positive benefits including promoting economic growth and employment, supporting retail and providing the necessary infrastructure which could benefit the wider community.

New information

Alternative 11 represents the new information that has resulted in the consideration of alternative 2 in which a 7,600 dwelling target is considered as the objectively assessed housing need as explained above. Alternative 12 represents the new information that has resulted in the consideration of alternative 3 and the preferred option.

Sustainability appraisal comments

None of the comments are agreed therefore no changes to the SA scores are proposed.

S3 Meeting housing needs

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. 35% affordable housing target. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'the affordable housing target should be 35% reflecting need'*.	This alternative would help provide the supply of affordable housing sooner and therefore has a positive effect on providing housing however the score for objective G) meeting housing needs remains the same as +3 is the maximum score provided. This alternative would however result in a greater negative effect on objective I) delivering the necessary infrastructure in comparison to the preferred policy given that no CIL could be levied within the lowest land valued areas. Although there is potential this could be levied in the upper end sales values in towns and rural areas. Some of the key infrastructure in the towns set out in the Mid Devon Infrastructure Plan which are not set out in the proposed strategic allocations (which are to be provided via S106 rather than CIL) would not be provided as part of CIL. Overall the difference in score in comparison to the preferred alternative is a -1 score for objective I) delivering the necessary infrastructure.
2. Remove the requirement to provide 5% of serviced dwellings. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'there is no quantified need for self build. It is unclear that selfbuilders will wish to purchase plots on larger housing estates. There are practical challenges eg times of working associated with selfbuilders on a larger housing site. The requirement to provide 5% should be removed.'*	The alternative of not requiring 5% of serviced dwelling plots for self-buildings would reduce the SA score for meeting housing needs to a negative effect given that it would be unlikely that service plots would be provided if this requirement was not within the policy. Therefore there would be less housing mix and consequently a reduced SA score is considered. This is however identified as uncertain as the alternative suggests only removing part of criterion d) and therefore the inclusion of the rest of the criterion may lead to some serviced

	plots for self-building. Overall the difference in score in comparison to the preferred alternative is a +2/? score for objective G) meeting housing needs.
Distribution of gypsy and traveller pitches	
3. Town focussed urban extensions A representation was made during the Local Plan Review Proposed Submission consultation which *'Gypsy and Traveller Accommodation Assessment does not justify allocations on particular sites'.* In response to this representation alternatives for the general distribution of development have been considered. A town focussed urban extension approach is assessed here and a rural distribution new sites approach in defined villages is set out below. Summary matrices are provided below with full assessments in annex 3.	This is the preferred option in the Local Plan Review. The option scores a neutral or positive score for all sustainability objectives with the exception of objective D) safeguarding and minimising resource use which scores a slight negative score. In comparison to the rural distribution alternative for traveller pitches the town focussed approach scores more positively and therefore is preferred.
4. Rural distribution new sites in defined villages. A representation was made during the Local Plan Review Proposed Submission consultation which *'Gypsy and Traveller Accommodation Assessment does not justify allocations on particular sites'.* In response to this representation alternatives for the general distribution of development have been considered. A rural distribution of new sites approach in defined villages is assessed here and a town focussed urban extensions approach is set out above. Summary matrices are provided below with full	In comparison to the preferred town focussed urban extensions approach this option scores more negatively on the sustainability objectives and therefore is not preferred.

assessments in annex 3.	
New Information	
5. New information was made available during the consultation on the Local Plan Review Proposed Submission. Upon review, it is proposed to increase the objectively assessed housing need to 380 per year to reflect the advice in the SHMA resulting in an OAN of 7600 dwellings. In addition, 260 dwellings is proposed in response to the policy-on scenario of including the option of a strategic scale employment site at junction 27 on the M5 motorway resulting in a total of 7860 dwellings.	This alternative would result in a change to S2 (please see comments in S2 for full details) with a change in the total and annual number of dwellings referenced in S3. No change is proposed to the SA in response to this change.
Changes to the Plan	
Alternative 3 is the preferred approach currently promoted by the Local Plan Review therefore no change is required. Alternative 5 is suggested as a modification to the plan which would result in a 7,860 dwelling target (reasons are provided in S2), this would result in no change to the SA of S3. All other alternatives are not considered beneficial and therefore are not preferred.

S4 Ensuring housing delivery

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Delete the policy. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'the contingency sites should be allocated to meet housing need, and*	The deletion of this policy would lead to a weakened plan in which there would be no strategic policy to ensure housing delivery. This policy enables action if expected delivery falls significantly below the annual target set out in policy S3. Overall without this policy it would

therefore this policy is unnecessary and should be deleted.'	result in a less flexible and sustainable plan as it suggests a higher growth scenario with no flexibility. The impact of higher growth scenarios are discussed under S2.
New Information	
2. New information was made available during the consultation on the Local Plan Review Proposed Submission. Upon review, it is proposed to increase the objectively assessed housing need to 380 per year to reflect the advice in the SHMA. In addition, 260 dwellings is proposed in response to the policy-on scenario of including the option of a strategic scale employment site at junction 27 on the M5 motorway resulting in a total of 7860 dwellings.	This alternative would result in a change to S2 (please see comments in S2 for full details) with a change in reference in S4 including the defined action levels. It would not result in a change in the SA score for S4 as the mechanism to ensure housing delivery would remain the same.
Changes to the Plan	
Alternative 2 is suggested as a modification to the plan which would result in a 7,860 dwelling target (reasons provided in S2). This would result in amendments in S4 which have reference to the overall dwelling target, including the table which sets out the defined action levels however this would result in no change to the SA score as the mechanism to ensure housing delivery would remain the same. Alternative 1 suggests the deletion of the policy with the justification based on allocating contingency sites and therefore the policy is unnecessary. The justification for the alternative is not agreed and the alternative is not preferred. The deletion of the policy would lead to a weakened plan in which there would be no strategic policy to ensure housing delivery.	

Summary Matrix - S4 Ensuring Housing Delivery

No additional appraisals for S4 have been undertaken. Where changes proposed would result in an alternative to S2 these have been considered under the S2 section of this annex. One alternative suggests the deletion of the policy entirely which would result in no appraisal for S4 but would affect the sustainability of the plan as a whole given that they would be no planning policy to ensure housing delivery.

S5 Public open space

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Sustainable Urban Drainage Systems (SUDs) to be considered as public open space. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Disagree with paragraph 2.35, SUDs provision should be considered as public open space.'*	This alternative would result in a reduced SA score for objective H) Community health and wellbeing. In which a +2/? Is considered instead of +3. In considering SUDs as public open space, this could to lead to less open space available/suitable for recreational use as some types of SUDs are inaccessible for public use. However if the rest of the policy were to remain the same then it would still be considered that the policy overall would have a positive effect on this objective. An uncertain effect is considered as some SUDs schemes that are particularly well-designed could be counted against open space provision however this would be decided case-by-case. Furthermore it would be uncertain how much land would be required for SUDs as this is dependent on each scheme and therefore the impact on the overall open space provision is uncertain. The scores for the other objectives are considered to remain the same.
2. The provision of open space should be applied to the towns of Tiverton, Cullompton and Crediton and not parishes. A representation was made during the Local Plan Review Proposed Submission consultation asked *'Should third word of first line be 'towns' as opposed to 'parishes'?'*	This alternative would result in a reduced SA score for objective H) Community health and wellbeing. In which a +2 would be considered instead of a +3. This is because the whole needs of the district would not be covered by the policy but would only provide for the towns rather than include the parishes in which they fall within. All other SA scores are considered to remain the same.
Changes to the Plan	

In response to alternative 2 a change in wording is proposed to clarify that the policy refers to the parish boundaries of the settlements noted reflecting the original intention of the policy. All other alternatives are not beneficial and therefore are not preferred.

Summary Matrix - S5 Public open space

	Preferred	Alternative	
Sustainability Objective	Proposed Submission Policy	SuDs considered as public open space	Open space in towns not parishes
A	+2	+2	+2
B	+2	+2	+2
C	0	0	0

E	0	0	0
F	0	0	0
G	-1	-1	-1
H	+3	+2/?	+2
I	+2	+2	+2

S6 Employment

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Employment allocations small scale in rural locations. A representation was made during the Local Plan Review	Policy S6 sets out a target for the amount of commercial floorspace but does not detail the location. This alternative would not have an

Proposed Submission consultation and noted that *'The allocations are in the wrong place (Cullompton especially) and therefore are unlikely to achieve these targets; there should be more small scale rural provision which would be easier to develop. This concern is supported by the lack of employment development in recent years.'*	impact on the SA score for this policy as the representation suggests alternative commercial allocations rather than result in a change to this policy. All sites currently proposed for allocation have been considered by a panel of experts and are considered deliverable. Alternative 6 for policy S2 which looks at a rural distribution of development gives some indication of the impact on the sustainability appraisal when distributing employment development more widely. The rural distribution alternative would lead to greater negative impacts on almost all sustainability appraisal objectives in comparison to the preferred alternative for S2 and would result in unsustainable travel patterns and would be contrary to NPPF advice in para 30.
2. Major leisure and tourism should be allocated. A representation was made during the Local Plan Review Proposed Submission consultation which promoted the option for a major leisure and tourism allocation on a site at junction 27 of the M5.	Policy S6 sets out a target for the amount of commercial floorspace but does not detail the specific allocations within the policy wording. This alternative would not have an impact on the SA score for this policy as the representation suggest an alternative commercial allocation rather than result in a change to this policy. The commercial allocation of junction 27 is considered later in this annex under the allocations section.
Changes to the Plan	
The alternatives suggested do not result in changes to policy S6 as such no changes are proposed.	

Summary Matrix - S6 Employment

No additional appraisals for S6 have been undertaken, the impacts of the proposed reasonable alternatives are limited, in which no significant amendments to the SA are considered.

S7 Town centres

No comments under S7 are considered to give rise to alternatives to be considered in this annex.

S8 Infrastructure

No comments under S8 are considered to give rise to alternatives to be considered in this annex.

S9 Environment

No comments under S9 are considered to give rise to alternatives to be considered in this annex.

S10 Tiverton

No comments under S10 are considered to give rise to alternatives to be considered in this annex.

S11 Cullompton

No comments under S11 are considered to give rise to alternatives to be considered in this annex.

S12 Crediton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. An additional criterion in the policy 'community and education facilities and other infrastructure to support the development proposed'. A representation was made during the Local Plan Review Proposed Submission consultation by Devon County Council and	This would result in an improved SA score of +2/? for h) ensuring community health and wellbeing, given that the school would not only provide for the new development proposed in Crediton but would meet the existing shortfall of education capacity in Crediton. The uncertain impact remains based on the existing comments in the

noted that *'There is a need for a new 1.1 ha primary school site.'* The need for a new primary school was only identified at the Proposed Submission consultation stage of the Local Plan and therefore is new information that has been considered.	SA with regard to the effect of development on local air quality which is not quantified.
Changes to the Plan	
Alternative 1 is proposed as a modification to the plan. This alternative would result in an improved score for h) ensuring community health and wellbeing by providing a new school which will not only meet the needs of the new development proposed in Crediton but would also meet the existing shortfall.	

Summary Matrix - S12 Crediton

	Preferred	Alternative
Sustainability Objective	Criterion on community and education facilities	Proposed Submission Policy
A	-1	-1
B	0	0
C	-1	-1
D	0	0
E	+3	+3
F	+2	+2
G	+3	+3
H	+2/?	0/?

S13 Villages

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Edge of Village Development. A representation was made during the Local Plan Review Proposed Submission consultation and noted that the Local Plan *'Should identify edge-of-village potential where there is no five year supply and where there is insufficient housing development in accordance with paragraph 2.11.'* A representation was also made which noted that *'Taken with S14 these create a "presumption against development" in rural areas outside settlement boundaries, contrary to the NPPF (see para 55). The policy should allow development adjoining settlement limits.'* In response to these comments an 'edge of village development' alternative has been considered.	This alternative would result in greater negative impacts in the SA on objectives A) protecting the natural environment, B) protection and promotion of a quality built environment, C) mitigating the effects of climate change, H) ensuring community health and wellbeing and I) delivering the necessary infrastructure. It also leads to an uncertain effect on objective D) safeguarding and minimising resource use. The option could lead to greater cumulative impacts given that development would be allowed beyond settlement limits and therefore would be less contained. An edge of village alternative has been appraised in annex 3 and a summary matrix is provided below.
Changes to the Plan	
Alternative 1 is not preferred as it would lead to a less sustainable policy. The role of the contingency sites ensure housing delivery without the need for edge-of-village development. The option could lead to greater cumulative impacts given that development would be allowed beyond settlement limits and therefore would be less contained.	

Summary Matrix - S13 Villages

	Preferred	Alternative

A	+3	+1
B	0	-1
C	+1	0
D	0	0/?
E	+3	+3
F	+3	+3
G	+3	+3
H	+3	+1
I	+2	+1

S14 Countryside

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. Planning Policy for Traveller Sites published in August 2015. National policy requires that new sites for travellers should be very strictly limited in open countryside that is away from existing settlements or outside areas allocated in the development plan. In response to this change in policy the removal of reference of provision of gypsy and traveller accommodation in this policy has	It is considered this change to policy would not significantly impact the SA scoring in which this amendment would be relevant to objective G) meeting housing needs, given that the policy remains supportive of affordable housing to meet local needs no change to the SA scoring is proposed. The need for gypsy and traveller sites as discussed in S3 have been allocated within larger sites and the

been considered.	opportunity for the provision of gypsy and traveller accommodation remains positive in DM7.
Changes to the Plan	
Alternative 1 is preferred to ensure the Plan is in conformity with national policy.	

Summary Matrix - S14 Countryside

The alternative proposed for this policy is not considered to give rise to any impact on the SA scoring.

Site Allocations

Tiverton

TIV1 – TIV5 Eastern Urban Extension

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Allocation for 1730 dwellings. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'Area B within the EUE is yet to be masterplanned, but survey work indicates that up to 799 dwellings can be accommodated on it, compared with the 553 dwellings referred to within the Local Plan. Together with slightly higher yields from the applications in Area A the total capacity of the site should be up to 1829 dwellings, rather than the 1520 dwellings indicated. This will improve viability and the efficient use of land for development. The policy should be amended to give a range of housing provision.'* An alternative of providing a range of 1580-1830 dwellings is considered. This takes into account permissions granted on area A and the potential for increased density in area B.	The alternative would not change the SA scores given that proposed area of the allocation and other criteria in the policy remain to provide mitigation to the potential negative effects of the development. The potential to increase the number of dwellings is still within the transport constraints of the area.
New Information	
2. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the canal to the south of the site is a conservation area	The additional items to be mentioned in the SA would not affect the scoring as the SA already takes into account a conservation area impact and the presence of locally listed heritage assets on site would not change the score as other heritage assets such as listed buildings and scheduled ancient monuments have already been recognised in

which was not previously picked up in the SA commentary although the Blundell's conservation area was mentioned. The HEA also goes into greater detail and identifies locally listed heritage assets on site which was not picked up in the SA.	the score. TIV1-TIV5 provides the mitigation measures as recommended in the HEA and therefore no change to the post-mitigation score is suggested.
Changes to the Plan	
Alternative 1 is proposed as an amendment to plan.	

Summary Matrix – TIV1-6 Eastern Urban Extension

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

TIV6 Farleigh Meadows

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that there are two listed buildings some distance from the site, Exe View (Grade II) is located to the south and there is another listed building located to the south west which was not previously picked up in the SA. The HEA also takes an entry from Devon County Council's comment on the outline planning application for this site in which it recognises potential archaeological resource in the area and suggests a non-intrusive	The HEA notes that there would not be any anticipated heritage impact and therefore there would be no change to the scoring in the SA with regard to heritage. In considering archaeological investigation, given that conditions regarding archaeological investigation have been discharged no mitigation is recommended and the SA scoring will remain the same.

field investigation. Reserved matters permission has been subsequently granted and pre-commencement conditions regarding archaeological investigation have been discharged. The site is now under construction.	
Changes to the Plan	
No changes are proposed to the Plan.	

Summary Matrix - TIV6

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

TIV7 Town Hall / St Andrew Street

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The SA already identifies listed buildings adjoining the site however the HEA goes into further detail and notes that the allocation includes works to two listed buildings and potential demolition of some unlisted buildings in the conservation area. The SA previously did not note the location of the site within the Tiverton Conservation Area. The DCC archaeology team commented on the application for the site and stated that they did not consider the site to be of	The information provided in the HEA would result in a pre-mitigation score from -1 to -2 on objective B given that the Tiverton Conservation Area was not previously mentioned. The post-mitigation score would remain as 0 taking into account the positive impact of bringing back into use the two listed buildings but development to the rear of the site potentially changing the character and appearance of the conservation area and the development pattern of the historic town. The scale, design and massing of the scheme was considered acceptable by the planning committee. With regard to archaeological investigation, given the comments provided by the DCC archaeology team no mitigation is recommended and the SA scoring will remain

significant archaeological value and did not need any further mitigation.	the same.
Changes to the Plan	
No changes are proposed to the plan, the new information provided by the HEA does not overall change the post-mitigation score and a full planning application has been approved.	

Summary Matrix –TIV7

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

TIV8 Moorhayes Park

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that there is an ancient monument located to the north west (on the north side of the A361) and the Knightshayes Historic Park is located to the north which was not previously picked up in the SA.	The SA previously did not identify these two heritage elements; however the HEA does state that the development would have no anticipated heritage impact and therefore would not change the score of the SA.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – TIV8

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

TIV9 Howden Court

No comments under TIV9 are considered to give rise to alternatives to be considered in this annex.

TIV10 Roundhill

No comments under TIV10 are considered to give rise to alternatives to be considered in this annex.

TIV11 Palmerston Park

No comments under TIV11 are considered to give rise to alternatives to be considered in this annex.

TIV12 Phoenix Lane

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Delete policy TIV12 Phoenix Lane. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'Policy TIV12 should be deleted.'*	The deletion of this policy would lead to a less positive and sustainable plan in which there would be no allocation proposing the regeneration of Tiverton town centre.
Changes to the Plan	
The proposed alternative is not preferred as they would lead to a less positive and sustainable plan. The justification for deletion is also not agreed.	

Summary Matrix - TIV12

One alternative suggests the deletion of the policy entirely which would result in no appraisal for TIV12 but would affect the sustainability of the plan as a whole. The deletion of this policy would lead to a less positive and sustainable plan.

TIV13 Tidcombe Hall

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Delete policy TIV13 Tidcombe Hall. A representation was made during the Local Plan Review Proposed Submission consultation and noted *'Objection as Tidcombe Lane is good boundary for development south of the canal and sufficient housing being built in Tiverton and more promised in future.'*	This comment suggests the deletion of Tidcombe Hall contingency site. This would lead to the loss of the contingency site and a less sustainable and flexible plan in terms of meeting housing needs. The purpose of the contingency sites is explained in policy S4.
2. 8.4ha with 200 dwellings This alternative re-considers the allocation as set out in the options consultation for a higher number of dwellings taking into account the information set out in the Historic Environment Appraisal (HEA) and reasons for the reduction in total dwellings based on SHLAA panel recommendations. Note the site area for the preferred alternative noted in the Proposed submission policy and this alternative are the same. 5.0ha noted in the Proposed Submission policy was written in error.	In reconsidering this site for the higher number of dwellings presented during the Local Plan Review Options consultation given the reasons for the reduction in total dwellings based on SHLAA panel and HEA recommendations, the site scores more negatively than the preferred policy in objectives A), B) and I) predominately due to the greater scale of development proposed within the allocation and the limitations of mitigation options as reflected in the latest evidence. A full appraisal is provided in annex 3 and a summary matrix is provided below.
New Information	
3. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic	This would result in no change to the pre or post mitigation SA scores of the Proposed Submission Local Plan Review as the importance of

environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the same elements as mentioned in the SA in objective B, but goes further to note that Tidcombe Hall is a 'potential heritage asset'.	Tidcombe Hall was already recognised in policy. Mitigation is also reflected in the reduced housing number in comparison to the higher density presented at the Local Plan Review Options consultation and discussed above.
Changes to the Plan	
Alternative 1 suggests the deletion of the policy entirely with the justification based on the argument that Tidcombe Lane is a good boundary for development and there is sufficient housing in Tiverton. The purpose of the contingency site is to enable flexibility in the plan to enable further sites to come forwards if the expected level of delivery falls significantly below the annual target. Overall the plan would be less sustainable without this contingency site as there would be less flexibility to ensure housing needs are met. Alternative 1 is therefore not preferred. Alternative 2 would result in greater negative impacts on the sustainability objectives A) natural environment, B) built and historic environment and I) delivering the necessary infrastructure and is therefore not preferred. New information presented in the Historic Environment Appraisal would not change the pre or post mitigation scores for the proposed submission policy which already recognises the elements set out in the HEA.	

Summary Matrix - TIV13 Tidcombe Hall

I	0	-2

TIV14 Wynnards Mead

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Delete policy TIV14 Wynnards Mead. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object as housing not needed/already over-provision within the plan/sufficient building going on elsewhere.'*	This comment suggests the deletion of Wynnards Mead contingency site. This would lead to the loss of the contingency site and a less sustainable and flexible plan overall in terms of meeting housing needs. The purpose of the contingency sites is explained in policy S4.
New Information	
2. A representation was made during the Local Plan Review	The existing appraisal for TIV14 has been updated to assess the

	Proposed Submission consultation and noted that *'Policy currently unsound, advises reference to Cottey Brook be given, and requests unobstructed public open space buffer, at least 7m wide to allow for future maintenance of watercourse.'* In response to this new information two alternatives are considered. The first considers the proposed contingency allocation in light of this new information without additional mitigation. The second considers a reduced area alternative as a result of additional mitigation to respond to this new information.	impact of this new information. If only the existing mitigation proposed in the Local Plan Review proposed submission policy is provided a reduced score for objective C) mitigating the effects of climate change is considered as the flood risk set out in the Environment Agency representation wouldn't have been accounted for. To provide the necessary mitigation required in response to new information provided by the Environment Agency and the Historic Environment Appraisal (discussed below) a new reduced area alternative is proposed. Full appraisals of the original site area taking into account the impact of this new information with existing mitigation and a reduced area site alternative are provided in annex 3 with a summary matrix provided below.
3.	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that Gotham since the previous appraisal has been upgraded to a grade II* listing. The HEA finds development as proposed would be very damaging to the setting of the listed building and heritage asset Wynnards Mead and would erode their special interest. In response to this new information two alternatives are considered. The first considers the proposed contingency allocation in light of this new information without additional mitigation. The second considers a reduced area alternative as a	The existing appraisal for TIV14 has been updated to assess the impact of the new information provided by this alternative with the existing mitigation in the policy. As a result of this new information regarding the historic environment appraisal a significant negative impact is considered for objective B) protection and promotion of a quality built and historic environment. To provide the necessary mitigation required in response to new information provided by the Environment Agency (discussed above) and the Historic Environment Appraisal a new reduced area alternative is proposed. Full appraisals of the original site area taking into account the impact of this new information with existing mitigation and a reduced area site are provided in annex 3 with a summary matrix provided below.

result of additional mitigation to respond to this new information.	
Sustainability Appraisal Comments	
4. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective B) protection and promotion of a quality built and historic environment. Argues score is too high and does not take into account the other heritage assets.'* Individual (5551)	The site has been reassessed due to new evidence undertaken as part of the Historic Environment Appraisal (HEA). Gotham since the previous appraisal has been upgraded to a grade II* listing. The HEA finds development as proposed would be very damaging to the setting of the listed building and heritage asset Wynnards Mead and would erode their special interest. In response to this new information provided in the HEA a significant negative effect -3 on objective B) built and historic environment is considered in the reappraised SA. The impact of the new information with existing mitigation and an alternative of a reduced area have been appraised and a summary matrix is provided below.
5. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective D) safeguarding and minimising resource use. Argues score is too high due to agricultural nature of the land with 1/3 of land classified as Grade 3 and contaminated land.'* Individual (5551)	The appraisal guidance p.192 of the Proposed Submission SA sets out how agricultural grades and land contamination have been considered as part of the appraisal process. The elements noted in the representation have been considered consistent with other sites in the Local Plan Review. Therefore the suggested change is not agreed.
6. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective E) promoting economic growth and employment. Boosting local construction firms and associated trades is true of all development and should not be the test but whether the finished development promotes growth/employment.'* Individual (5551)	Agree the scoring should be reduced to 0 as the score provided for this site in the previous SA does not follow the appraisal guidance on p.192 in which residential development less than 100 dwellings is considered to have a neutral effect. This scoring has been consistently applied to other sites in the Local Plan Review. Disagree that boosting local construction firms and associated trades should not be

	considered in this objective. For larger sites residential development is considered to have a slight positive impact. This agreed scoring has been reflected in the updated and reduced area alternative appraisals and a summary matrix is provided below.
7. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective F) supporting retail. Believe should only consider new retail provision.'* Individual (5551)	Consistent with other sites appraised in the Local Plan Review, where small sites are proposed within a town a slight positive effect on the town centre is considered. Disagree that the impact on existing retail should not be considered as part of this objective. As set out in the SA, this objective considers safeguarding the vitality and viability of town centres and the relationship between new development and town centres. No change to the SA is proposed.
8. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective G) meeting housing needs. A significant positive effect overstates the number of houses the site is actually providing in the context of the Plan as a whole.'* Individual (5551)	Agree that the term 'significantly' is misleading and is therefore suggested to be removed from the commentary. However disagree that the score is too high. Consistent with other sites appraised in the Local Plan Review sites of a scale of 20-99 dwellings are considered to have a positive impact in meeting housing needs. No change to the SA is proposed.
9. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective H) ensuring community health and wellbeing. Disagree site is close to a bus service and suggests that there's no other evidence for this score.'* Individual (5551)	Disagree, there are a number of bus services available within 0.5 miles of the site. The site is also within walking distance to Tiverton Town centre. Consistent with other sites appraised in the Local Plan Review this site has scored a slight positive impact for the reasons above. No change to the SA is proposed.
Changes to the Plan	
Alternative 1, the deletion of the policy is suggested as a modification to the plan, although not for the reasons provided in the comment but in	

response to the new information provided by alternative 2 and 3. Whereby in considering the new information presented by the EA on flood risk and the built and historic environment by the HEA, to continue with the existing policy would lead to a significant negative effect on objective B) protection and promotion of a quality built and historic environment, and a negative effect on objective C) mitigating the effects of climate change. Due to this new information, the policy as proposed is no longer preferred.

A reduced area alternative was considered by this SA in response to the mitigation required by the new information which would result in a site of 1.2ha subject to 29 dwellings. This alternative would result in an improved score for B), C) and D). However overall given that the purpose of the site for inclusion as a contingency allocation, the reduced area alternative would no longer support the quantum of development required to be effective as a contingency allocation. The site is therefore proposed for deletion. The deletion of the policy results in the loss of the contingency site and therefore a less sustainable and flexible plan, however the sustainability issues of the site outweigh the benefit of the inclusion of the contingency site without mitigation. Flexibility in the plan overall continues as two other contingency sites in the plan remain.

Comment 6 is suggested as a modification to the SA objective E) promoting economic growth and employment, as the original score did not follow the appraisal guidance on p.192 in which small scale residential development which is less than 100 dwellings is considered to have a neutral effect. This has been reflected in the reappraised sites, taking into account the impact of new information with existing mitigation and the reduced area alternative. All other alternatives refer to SA scoring and are not preferred for reasons set out above.
The impact of the new information with existing mitigation and an alternative of a reduced area have been appraised. A summary matrix is provided below along with the scoring for the original appraisal for comparison.

Summary Matrix - TIV14 Wynnards Mead

	Alternative		
Sustainability Objective	Previous SA (no new info)	Updated SA (new info, existing mitigation)	Reduced Area
A	-1	-1	-1
B	0	-3	0
C	0	-2	0
D	-1/?	-1/?	-1/?

TIV15 Tiverton Infrastructure

No comments under TIV15 are considered to give rise to alternatives to be considered in this annex.

Tiverton Alternative Options

OTIV2 Hartnoll Farm

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Hartnoll Farm with 1000 dwellings and 20,000sqm employment. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to exclusion– site can accommodate 1000 dwellings (at 35 per hectare, with full mix of types and sizes, and an element of affordable housing), at least 20,000sqm employment (6.97ha allowed to wrap around existing Hartnoll Business Centre), primary school (1.95ha allowed), neighbourhood/local centre (to serve retail/social needs of community inc. 2000sqm mix of uses including community hall/space, local shops, restaurant/café, pub and/or hot food takeaway) and green infrastructure (12.07ha inc amenity open space, children's play, allotments/orchards, buffer planting, sports/playing field provision off-site on adjacent land to south). Site can accommodate not only 500 dwellings currently allocated towards EUE area B, but more of Tiverton's future demand.'* In response to this, an alternative of OTIV2 was considered with a change in total number of dwellings to 1000 and an addition of 20,000sqm employment. The other suggestions in the representation are already covered by the existing criterion in the Local Plan Review options policy which was consulted in 2014.	The change in this policy would result in a change in score for objective E) promoting economic growth and employment in which the policy provides 20,000 sqm of commercial floorspace helping to diversify the economy and encourage inward investment. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. It provides employment sites near where to people live would provide the opportunity to reduce out-commuting. There would therefore overall be a significant positive impact +3 in objective E) promoting economic growth and employment. All other scores for the objectives in the SA are considered to remain the same.

Changes to the Plan
Alternative 1 is not preferred and OTIV2 Hartnoll Farm is not proposed as an allocation given the issues around objective B) Protection and promotion of a quality built and historic environment in which the coalescence of Tiverton and the village of Halberton which has its own separate identity cannot be mitigated.

OTIV4 Blundells School (Proposed for allocation TIV16)

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
Sustainability Appraisal Comments	
1. National planning policy acknowledges the importance of ensuring housing numbers and employment opportunities are considered in tandem. In response to this full Council on 22nd September 2016 resolved to reallocate land at Blundells School for residential development of 200 dwellings. The policy has been amended to reflect the latest evidence and has been reappraised taking these findings into account. A full appraisal has been provided in Annex 3 and a summary matrix is provided below.	In comparison to the alternative considered during the Local Plan Review Proposed Submission (2015) at Blundells School for 60 dwellings, this alternative scores more positively or the same in all aspects apart from objective e) promotion of economic growth and employment given the 7000sqm of commercial floorspace is no longer considered. This new appraisal takes into account new information including the support of the Environment Agency and the provision of a new junction on Heathcoat way to enable the delivery of 200 dwellings. The appraisal also has greater recognition of the benefits of the contamination assessment and remediation of the site.
New information	
2. The Environment Agency has provided its support for the Blundells School site given that the development of the site would provide an opportunity to promote green infrastructure, contribute towards Water Framework Directive objectives through the policy area specifically the Industrial Estate, reduce flood risk downstream within Tiverton and alleviate erosion issues opposite Tiverton Business Park.	This new information has improved the scores for objective C) mitigating the effects of climate change.
3. Provision of junction on Heathcoat Way.	This new information enables the delivery of 200 dwellings on the site as such improvements are considered for a number of the objectives including objective G) Meeting housing needs.

4. Development is now considered deliverable. The costs principally associated with access and flood mitigation measures at the Proposed Submission stage of the Local Plan was considered to prohibit development in this location. However these issues have now been overcome.	This new information does not change the scoring of the site. The site is now proposed for allocation.
5. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that there will be some impact on the Conservation area however notes that good design can provide scope for improvement of the setting of the conservation area.	This new information is recognised in the Sustainability Appraisal and post-mitigation a slight positive score is considered overall.
Changes to the Plan	
The policy is proposed to be included as part of the Local Plan Review. Overall the policy scores more positively than the option considered at the Local Plan Review Proposed Submission consultation (2015).

OTIV13 Exeter Hill

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
Sustainability Appraisal Comments	
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to exclusion – SA highlighted landscape impacts, but not a valued/designated landscape as per NPPF, and impact*	It is agreed that the scoring for objective A) protection of the natural environment should be amended to a -1 rather than a -2 score to be aligned with other sites in which existing development forms a backdrop but the site is highly visible. This concurs with the Inspectors

exaggerated/landscape impact not substantiated by evidence, will be seen against backdrop of town, and can be assimilated with careful design and strategic planting'. N Jillings for Devonshire Homes (1050); Dial Holdings c/o PCL Planning (2315)	comment during the Examination of the AIDPD. He concluded in consideration of visual impact it would be a relatively modest extension to the urban area, set below the skyline, but nevertheless it would be more intrusive than other allocations.
Changes to the Plan	
No changes are proposed to the Local Plan given that the site is not required for development to meet the needs of the Local Plan and it would be more intrusive than other allocations.

OTIVNEW New Site Land at Seven Crosses Hill

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. OTIVNEW Land at Seven Crosses Hill, 7.69ha for 184 dwellings. A representation was made during the Local Plan Review Proposed Submission consultation which put forward a site of *'7.69ha; provides logical sustainable expansion of Tiverton, in light of uncertainty with EUE masterplanning. Site enclosed by established boundary planting, with scope to reinforce boundary trees/hedges to maintain 'soft' green edge to this part of town. No viability issues, no significant on or off-site abnormal development costs, and can contribute to land supply'.*	A full appraisal of this site is provided in annex 3 and a summary matrix is provided below.
Changes to the Plan	
This alternative site is not preferred given that there are a number of constraints to the site including topography and highways access. Although access is achievable, work would require significant excavation and would constrain the delivery of the expected yield.	

Summary Matrix – OTIVNEW New Site Land at Seven Crosses Hill

Cullompton

CU1-CU6 North West Cullompton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Education counted as part of the 21,000sqm commercial floorspace. A representation was made during the Local Plan Review Proposed Submission consultation which noted that *'whilst the use of the wider definition of employment is supported, the 21,000sqm of commercial floorspace in policy CU1 should include reference to education'.*	2.1ha identified for the school could amount to 21,000sqm of commercial floorspace and would not enable the provision of other employment generating uses for the area. Taking into account the potential for 21,000sq m of commercial floorspace that could be lost in the allocation the result would be a greater negative impact on objective E) promoting economic growth and employment. Overall a slight positive instead of a significant positive effect would be considered (+1).
2. Include the whole of the proposed Growen Farm option for development as part of the North West Cullompton allocation. Various representations were made during the Local Plan Review Proposed Submission Consultation which suggested the full allocation of the Growen Farm option. In response to these comments an alternative of the inclusion of the whole of the proposed Growen Farm option for development as part of the North West Cullompton allocation has been considered.	This alternative would result in a greater negative score for objective A) protection of the natural environment in which the 2014 Landscape and Visual Appraisal on Strategic Site Options report identified the eastern field segments of the Growen Farm land as not suitable for development. A summary matrix is provided below.
New Information	

3. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the same elements as mentioned in the SA but provides greater detail on the impact of each element and mitigation options available.	This would have no change to the pre or post mitigation SA scores as the SA already recognises the elements identified in the HEA. The recommendations in the HEA can be taken into account as part of the masterplanning exercise which is identified in the SA as a mitigation. No change to the SA is proposed.
4. Contributions from development to Town Centre relief road and J28. Also note a change to the total commercial floorspace is proposed in-line with the adopted North West Cullompton masterplan to 10,000sqm.	Overall this will improve the post-mitigation score of objective I) delivering the necessary infrastructure to +3 given the development of this site will help to deliver multiple significant infrastructure projects which will benefit the wider community. This is the preferred alternative. The change to the total commercial floorspace does not affect the scoring of the site as it still provides large scale commercial development in-line with the appraisal guidance of the SA.
5. Re-allocation of land to the south west of the site.	This would make no changes to the SA scores of the site. The area included has been previously allocated and appraised. The cumulative impact of developing sites at Cullompton is discussed in annex 1.
Sustainability Appraisal Comments	
6. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of -2 for objective A) protection of the natural environment.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	It is agreed that the impact on landscape was not fully reflected in the proposed submission SA scoring and a slight negative score is considered. It is however not agreed that a negative (-2) score is appropriate given that mitigation has been considered as part of the site including not allocating the most sensitive area of Growen Farm to reflect the findings of the Landscape and Visual Appraisal as well as positive impacts of environment protection and enhancement and

	provision of Green Infrastructure set out in the policy. However as noted in the rep and the proposed submission SA text, given the level of development the proposal is considered to have an impact on the character of the area and this was not previously reflected in the original score. This has been reflected in the updated appraisals below.
Changes to the Plan	
The new information provided in alternatives 4 and 5 are proposed as modifications to the plan. The representation made in alternative 6 is also agreed and proposed a change to the SA scores as identified in the matrix below. A change to the SA scoring is also proposed following the comment made in alternative 6.	

Summary Matrix - CU1-CU6 North West Cullompton

H	+2	+2	+2	+2
I	+3	+2	+2	+2

CU7-CU12 East Cullompton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. No quantum specified for criteria b) green infrastructure and c) public open space. A representation was made during the Local Plan Review Proposed Submission consultation which noted that they *'Support the principles of this policy (CU9 East Cullompton Environmental Protection and Green Infrastructure) and recognise the importance of green infrastructure. However would wish to see more flexibility to the quantum identified in criteria b and c. The level of provision should be agreed as part of the master planning work and removed from the local plan policy'.*	This alternative would result in an element of greater uncertainty for objective A) Protection of the natural environment to -1/? given that without the broad quantum of strategic green infrastructure set out in policy the mitigation this will provide is uncertain. A greater negative effect although uncertain, is also considered for objective H) (-1/?) ensuring community health and wellbeing in which the required green infrastructure and areas of public open space identified to meet the needs of the new community may not be provided.
2. Proposed Submission version East Cullompton with landswap part of site – Land at 'Newland Persey' replaced with land at 'Cooke'. East Cullompton total 166 ha site area. A representation was made during the Local Plan Review Proposed Submission consultation which suggested *'the best way forward for all parties would be for me to offer my 45 acres…on the north side of the A373 in exchange for the land at Newlands Farm on the south side of the A373'.*	This alternative would result in the same scoring in the SA as the Proposed Submission option given that the landswap proposed is in the same landscape character area and has similar features to the rest of the East Cullompton site. An additional appraisal has not been provided given the same scoring.
3. East Cullompton Aller Barton Farm and land south of Honiton Road. 181ha site. A representation was made during the Local Plan Review Proposed Submission consultation which suggested *'I would*	This alternative scores less positively in objective B) protection and promotion and potential of quality built environment. A greater uncertain effect is considered for objectives A) protection of the natural environment, H) community health and wellbeing and I)

repeat my offer to move if you take the whole of my farm….making land available up to the Cullompton/Plymtree road'.	delivering the necessary infrastructure. The site does however score more positively in objective D) safeguarding the minimising resource use. A full appraisal is provided in annex 3 and a summary matrix is provided below.
New Information	
4. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that the site is close to a number of listed building including the grade II Higher Moorhayes Farmhouse building and front garden wall and the grade II Lower Moorhayes former farmhouse. Both listed buildings lie to the north east edge of the allocation with Lower Moorhayes most closely affected. These listed building were not previously identified in the SA. All other elements noted in the HEA were noted in the SA previously and would not affect the SA score.	The SA did not previously identify the listed buildings noted in the HEA in which a pre-mitigation score of -2/? Is considered. The HEA recommends careful consideration with regard to proximity of new buildings, together with the details of design materials and colour palette used. The policy already requires a public masterplanning exercise to ensure the quality of the final design of development which will provide mitigation. The HEA suggests that Lower Moorhayes should be provided with a planted buffer zone to the south side. A modification has been recommended to add an additional criterion to state 'Design solutions which respect the settings of listed buildings adjoining the site'. With this mitigation in place it is considered the post-mitigation score will remain the same.
Sustainability Appraisal Comments	
5. A representation was made during the Local Plan Review Proposed Submission consultation which suggested *'East Cullompton option should score a +2 positive impact under H) ensuring community health and wellbeing based on provision of public open space, public access points, community services and facilities etc'.* Pegasus Planning (3678)	The reasons set out in the comment have been considered in the scoring of East Cullompton as set out in the 'mitigation' commentary which improves the original score of -3 to 0. The +2 score is not agreed. Therefore no change is proposed.

6. Disagree with part I) 'Commitment' to improvements at J28. Believe it is uncertain. Hallam Land Management (4386)	Not agreed Part 'I' does not mention 'commitment' to improvements at J28 but does identify a phasing strategy and provision of mitigation measures to ensure only acceptable impacts occur to J28. The Council has been working closely with statutory consultees to ensure emerging proposals for junction 28 M5 improvements are appropriately designed.
7. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of -1 for objective A) protection of the natural environment.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	The representation concludes the same score as the SA.
Changes to the Plan	
Alternative 4 is preferred. The additional criterion provides mitigation and protection to the historic environment although the SA score remains the same. All other alternatives are not preferred. For alternative 2 although the resultant scoring is the same as the Proposed Submission option, the delivery of this alternative would be more challenging. The Landscape and Visual Appraisal 2014 notes that development North of Honiton Road, development would be phased west to east with an intermediate threshold at the linear woodland. Extension of development beyond that boundary might be possible in the longer term, but would need to be subject to a more detailed assessment to determine the effect on the wider landscape and visibility from the AONB. The area to the South of Honiton Road, development is less constrained and would be undertaken across much of the site. Therefore the land swap proposed would affect delivery rates with the proposed substituted land only be delivered at the end of development instead of earlier on in the development, in which the area South of Honiton Road could be provided. Alternative 3 is not preferred. The unusual shape and separation of the site with existing development to the west raises concerns about how well the final design could integrate the existing and proposed development. The unusual shape with only access to the east of the site also raises a level of uncertainty in providing accessible forms of travel and providing the necessary infrastructure. No changes to the SA are proposed following comments on the SA in alternatives 5 to 7.

CU13 Knowle Lane

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
Sustainability Appraisal Comments	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of 0 for objective A) protection of the natural environment.'*	The representation concludes the same score as the SA.

Mr Christian & Mr Force c/o Genesis Town Planning (3780)	
Changes to the Plan	
The comment made would result in no changes to the Plan or SA.	

Summary Matrix – CU13 Knowle Lane

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CU14 Ware Park and Footlands

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that the site lies some distance to the south west of St Andrew's Hill (a Roman fort and Scheduled Ancient Monument) and to the south of a possible road leading west from the fort. The SA did not previously identify these heritage elements. All other elements noted in the HEA were noted in the SA previously and would not affect the SA score.	The HEA states that the proposed development would have no anticipated heritage aspect, therefore no change to the SA is proposed.
Sustainability Appraisal Comments	
2. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a*	The representation concludes the same score as the SA.

post-mitigation score of 0 for objective A) protection of the natural environment.' Mr Christian & Mr Force c/o Genesis Town Planning (3780)	
Changes to the Plan	
None of the alternatives would result in any changes to the Plan or the SA.	

Summary Matrix - CU14 Ware Park and Footlands

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CU15 Land at Exeter Road

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. Site allocation proposed to be reduced to 24 dwellings. Site has permission for 24 dwellings, there is no confirmation that the remainder of the site is deliverable and is unlikely to make the contribution in numbers stipulated by the original proposed policy.	No changes to the SA are expected.
Sustainability Appraisal Comments	
2. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of 0 for objective A) protection of the natural environment.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	The representation concludes the same score as the SA.
Changes to the Plan	

The comment made would result in no changes to the Plan or SA.

CU18 Venn Farm

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that the *'allocation should be extended to incorporate adjacent 8 hectares; new housing growth will benefit from additional employment, Cullompton is strategically placed on M5 and larger site will help support the infrastructure costs of the site (i.e. land needed for flood zone, habitats, link road)'*. This alternative is similar to the consideration of a combined allocation of the three sites A) Venn Farm B) Land adj Venndale NW Long Moor Road C) NW Kingsmill Industrial Estate in Cullompton considered at the Local Plan Review options consultation. In response to this alternative, the combined allocation of 13.2ha of 31,090sqm commercial floorspace has been considered.	This alternative has been considered as it is distinct to the proposed option. However upon appraisal as the proposed site and the alternative both fell within the same grouping i.e. over 10,000sqm commercial floorspace and were in the same location it led to matching results in the SA. As such no appraisal or summary matrix is provided as the results are the same as the proposed submission.
Changes to the Plan	
Alternative 1 is not preferred as the additional commercial development is not necessary. The Local Plan Review already allocates sufficient provision.	

Summary Matrix - CU18 Venn Farm

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CU19 Town Centre Relief Road

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that parts of the site include or are close to the conservation area including the historic mill leat. Several listed buildings nearby including Grade I St Andrews church. Grade II listed first bridge is located to the south. The HEA also identifies the site lies within a landscape that has evidence of prehistoric and Roman activity recorded, elements which were not previously picked up in the SA.	This information would change the pre-mitigation score to a -3/? for objective B) the built and historic environment. Recognising the potential impact on the listed buildings and conservation area as well as the possibility of archaeological deposits. However much of the impact will depend on the line of the proposed road and its design. The policy includes a requirement for public consultation which will help provide for the most appropriate design provision. An amendment to the policy and supporting text has been proposed which ensure the protection of the setting of listed buildings, conservation area and the provision of archaeological investigation and mitigation. It should also be recognised that a town centre relief road would result in major public benefits making the town centre a more pleasant environment and enabling an upgrade of the historic environment by improving the setting of a large number of listed buildings. Therefore post mitigation score is suggested to be a neutral although uncertain effect 0/?.
Changes to the Plan	
Amendments to the policy and supporting text are proposed which ensure the protection of the setting of the listed buildings and	

conservation area and ensures the provision of archaeological investigation and mitigation.

CU20 Cullompton Infrastructure

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. A representation was made during the Local Plan Review Proposed Submission consultation and which *'Requests additional criterion stating 'provision of works to reduce flood risk'*.	This alternative would result in a greater positive impact on objective c) Mitigating the effects of climate change. Overall with the positive impact of this criterion, CU20 scores +3 post mitigation for objective c).

Changes to the Plan
Alternative 1 is proposed as a modification to the plan. This alternative would result in an improved score for objective c) mitigating the effects of climate change. Cullompton is a Critical Drainage Area which requires measures to reduce flood risk (above those expected elsewhere) therefore it is considered that the modification proposed by alternative 1 is beneficial in improving the sustainability of this policy.

CU21 Land at Colebrook CONTINGENCY SITE

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. 19.3ha, 400 dwelling site. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they object *'to exclusion of 16.8ha site as a full allocation within the plan/objects to inclusion of 4.8ha as contingency site only. Minimum of 400 dwellings should be allocated within the site area of 21.6ha'* In response to this representation an alternative of 19.3ha for 400 dwellings was considered. This represents the full area proposed as part of the options consultation. 16.8ha referred to in the options allocation and 21.6ha referred to in the representation are both errors in measuring the size of the full allocation.	In considering this alternative in comparison to the preferred option of 4.8ha 100 dwellings, the site would score less post-mitigation on objective A) protection of the natural environment in which a slight negative -1 score is considered due to the larger site reflected and the potential impact on the landscape. It also scores more negatively in objective I) delivering the necessary infrastructure with a negative score of -2 as the site is of a scale that is significant enough to affect the local road network. A full appraisal is provided in annex 3 and a summary matrix is provided below.
Sustainability Appraisal Comments	
2. A representation was made during the Local Plan Review Proposed Submission consultation which argued that the SA *'Has not properly considered all site alternatives at Cullompton. Colebrook at 16.8ha, 300 dwellings should be considered'.* Mr Christian & Mr Force & Mr Christian c/o Genesis Town Planning (3780)	A larger site of 16.8ha of 300 dwellings was considered at the Local Plan Review options consultation although the SA at that time did not consider post-mitigation scores. As noted in alternative 1, 16.8ha referred to in the options allocation was an error in measuring the size of the allocation. As such an appraisal for the full allocation of 19.3ha for 400 dwellings has been considered in this SA as set out in alternative 1. A full appraisal is provided in annex 3 and a summary matrix is provided below.
3. A representation was made during the Local Plan Review	The representation concludes the same score as the SA.

Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of 0 for objective A) protection of the natural environment.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	
4. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) states landscape impact for the larger proposed site is same as other allocated large sites in Cullompton, i.e. slight negative impact.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	The representation concludes the same score as the SA.
Changes to the Plan	
Alternative 1 is not preferred given that the site is of a scale that is significant enough to affect the local road network. Alternative 2 is a comment on the SA which identifies that a full appraisal has not occurred for the larger Land at Colebrook alternative. In response to this a full appraisal has been undertaken with a summary matrix provided below. Alternative 3 and 4 conclude the same score as the SA, as such no changes are proposed.

Cullompton Alternative Options
OCUNEW Tiverton Road

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and objected to the omission of this site. *'Site is previously developed land and is not affected by constraints of larger, infrastructure-dependent sites. Can accommodate 13-19 dwellings. Site is within walking distance of bus services, and is within single ownership. Site serves wide catchment so redevelopment would not result in loss of a local community facility. Pre-development conditions would cover contamination, transport statement and travel plan, archaeological investigation, biodiversity survey, screening/safety/security from adjacent sub-station'.*	A full appraisal of this site is provided in annex 3 and summary matrix is provided below.
Changes to the Plan	
Alternative 1 is not preferred. Although the post-mitigation scoring is relatively neutral, the unknown impact with regard to the potential loss of a community facility could amount to a negative impact on objective H) ensuring community health and well-being. It has been scored a neutral effect as the representation made as part of the Local Plan Review Proposed Submission consultation has argued there would be no loss of a local community facility as a new better site is preferable in a better location for congregation. However as there is no sufficient detail in the representation to be certain of this provision. Furthermore as this is a brownfield site within the settlement limit it does not need to be allocated for an application to come forward, as such, it is therefore not preferred.

Crediton

CRE1 Wellparks

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'consider policy unsound - proposed allocation subsumes grade II listed farm complex and alters setting. Disputes assessment in recent planning application and states Historic Environment Appraisal needs to reassess the likely impact which the development will have on the Conservation Area (and presumably listed building?), if concludes there is harm, provide mitigation and if still harm justify allocation.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the same elements as mentioned in the SA in objective B, but provides further detail in the scope of the harm and mitigation options available; as such no change in the pre-mitigation score is considered. Detail in the HEA recognises the site now has outline planning permission with mitigation to protect the heritage assets impacted by the site. However the HEA does note that there will be some negative impact on the Conservation Area which was not previously recognised post-mitigation, as such a slight negative effect is considered post-mitigation (-1). HEA
Changes to the Plan	
No change to the plan is proposed however a change in the post mitigation score in objective b) for this site is considered with the effect changing from a neutral score (0) to a slight negative score (-1) given the potential impact on the conservation area.	

Summary Matrix - CRE1 Wellparks

CRE2 Red Hill Cross, Exhibition Road

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they consider that the *'Policy is currently unsound - no work in evidence base to assess impact on Shobrooke Park; appraisal needed, if concludes harm set out mitigation measures, if cannot be mitigated need to*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies Creedy Bridge and Cottages located to the north east. Shobrooke Historic

justify allocation as per NPPF para 133 and 134.'	Park located to the east, and Creedy Park to the north west. There is also a grade II listed chapel cemetery located toward the south. These elements were not previously picked up in the SA as such a pre-mitigation score of -2 from 0 is suggested. The HEA recommends mitigation in the form of a generous landscape margin on the east facing side of the site. A change to the plan is proposed to add to the supporting text, to reflect this recommendation. Therefore the post-mitigation score remains as 0.
Changes to the Plan	
In response to new information presented in alternative 1, a change to the plan to replace paragraph 3.160 with 'The site is in a prominent position, which is visible from historic Shobrooke Park to the east. Detailed design and development which respect local distinctiveness, including a generous landscape margin on the east facing side of the site will mitigate any potential impact' is proposed to reflect the recommendation in the HEA and provide mitigation for this preferred alternative.	

Summary Matrix - CRE2 Red Hill Cross, Exhibition Road

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CRE3 Cromwells Meadow

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they consider that the *'Policy is currently unsound - no work in evidence base to assess impact on Shobrooke Park; appraisal needed, if concludes*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies Creedy

harm set out mitigation measures, if cannot be mitigated need to justify allocation as per NPPF para 133 and 134'.	Bridge and Cottages located to the north east. Shobrooke Historic Park located to the east, and Creedy Park to the north west. There is also a grade II listed chapel cemetery located towards the south. However the HEA also notes that the backdrop of existing Cromwells Meadow and Willow Walk provide a level of mitigation. The HEA also identifies the site lying in an area of archaeological potential. These features of the site were not previously picked up as part of the SA however as noted in the HEA some mitigation is provided by existing development, as such an overall pre-mitigation score of -2/? is considered for objective b) the built and historic environment. The HEA recommends that additional mitigation may be provided through landscaping along the sensitive boundary. An amendment to the supporting text has been suggested as a change to the Plan to reflect this recommendation. The HEA also notes that archaeological mitigation could be implemented through a condition granted to any consent. An amendment to the policy has been suggested to include a criterion which requires archaeological investigation and mitigation. As such overall a neutral although uncertain effect is considered for objective b) the built and historic environment, post-mitigation given the unknown element of the archaeological potential.
Changes to the Plan	
In response to new information presented in alternative 1, a change to the Plan to add to the supporting text a new sentence which states 'Appropriate landscaping will be required along the eastern boundary given the potential visibility of the site from historic Shobrooke Park' is recommended in response to the HEA. Similarly a criterion to the policy to ensure archaeological investigation and mitigation is suggested.

CRE4 Woods Group, Exeter Road

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identified non listed heritage assets on the site which should be	When taking into account the potential positive impact of the site on the conservation area with redevelopment, but the negative impact if there is a loss of the unlisted heritage assets as noted in the HEA the impact on objective b) protection and promotion of a quality built and historic environment pre-mitigation is considered to change to a

retained, this was not previously recognised in the SA. All other aspects identified in the HEA have been previously considered in the SA.	neutral although uncertain effect (0/?) from a slight positive effect. The uncertainty is due to the unknown design of the site and whether the unlisted heritage asset buildings will be retained. The HEA suggests the retention of the non-listed heritage assets as mitigation. As such a change to the policy supporting text is recommended in which retains these non-listed heritage assets with the overall post-mitigation score remaining as a slight positive effect (+1) given that the site at present is run-down and detracts from the area and the redevelopment of the site has the potential to enhance the local street scene and conservation area.
Changes to the Plan	
A change to the policy supporting text is recommended retaining the non-listed heritage asset buildings within the site.	

Summary Matrix – CRE4 Woods Group, Exeter Road

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CRE5 Pedlerspool

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted *'As set out in evidence report, new primary school required in Crediton. Policy should be amended to include provision for this new school.'*	The change in policy would result in an increased post-mitigation score from 0 to +2 in objective I) delivering the necessary infrastructure. The loss of the extra care scheme although would have an impact on the development proposal, the scoring in the SA would not change as the proposal would still provide a significant contribution towards meeting the housing needs of the population of

	Crediton and therefore objective G) meeting housing needs still scores +3.
New Information	
2. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they consider that the *'Policy is currently unsound – what is impact on registered parks of Shobrooke and Creedy? Landscape assessment only considers Creedy but is inadequate in terms of assessment of impacts and mitigation. Historic environment appraisal needs to assess impact upon park and garden, if concludes harm then set out mitigation measures, if cannot be mitigated need to justify allocation as per NPPF para 133 and 134.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. The HEA identifies Creedy Bridge and Cottages located to the north east. It also identifies Shobrooke Historic Park located to the east, a grade II chapel cemetery located towards the south and an area of archaeological potential which were not previously identified in the SA. The HEA also identifies Creedy Park which was previously identified in the SA. Taking the new information into account and the already identified information, the effect pre-mitigation would change the score to a -3/? from a -2 given the additional historic assets identified and uncertainty of impact on archaeological potential. The policy however already affords protection to Creedy Historic Park and Garden and provides for archaeological investigation and mitigation. The HEA noted that the north west boundary, due to its close proximity, is also vulnerable to harm. It recommends a mitigation strip of new tree planting along the full length of this boundary to reinforce the existing screening provided by trees on the edge of Creedy Park. The HEA also recognises the policy provides for landscape strips to the NE and SW sides which would provide mitigation. The policy already includes a criterion to protect TPO's and the supporting text already suggests a buffer of trees should be provided around and within the site reflecting historic planting to extend and soften the transition into

	the Green Infrastructure proposed. In terms of Shobrooke Park mitigation proposed in CRE2 is noted in the HEA, however additional mitigation in this policy is not suggested. As such the post-mitigation score remains as -1 although this is uncertain given the unknown archaeological potential element therefore overall score is considered to be -1/? which was not recognised previously. No other mitigation options are recommended.
Sustainability Appraisal Comments	
3. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Gypsy and Traveller Accommodation Assessment does not justify allocations on particular sites, nor is there justification or comparison of options in Sustainability Appraisal.'* MJ Gleeson c/o Bell Cornwell LLP (3775)	In response to this comment the general distribution of gypsy and traveller pitches has been assessed under the alternatives considered under S3 'Meeting Housing Needs'. Two alternatives, 'a town focussed urban extension' approach and 'rural distribution new sites' have been considered. Please see assessment under S3 with full appraisals provided in annex 3.
Changes to the Plan	
Alternative 1 is considered as a modification to the plan given it would improve have a positive impact on delivering the necessary infrastructure. Alternative 2 recognises additional historic assets not previously identified in the SA however the policy already affords mitigation recommended and no additional mitigation is recommended. Alternative 3 is considered under S3 with two alternatives for the general distribution of gypsy and traveller pitches assessed.

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. 2.8 ha with 50 dwellings This alternative re-considers the allocation as set out in the options consultation and provides post-mitigation scores. This takes into account the updated methodology for the appraisals of site options (as set out in the Local Plan Review Proposed Submission SA 2015) and enables the comparison of this smaller	This alternative scores very similarly to the preferred alternative given that this site has similar characteristics and location. It would score a slight positive effect (+1) rather than a positive effect on objective F) supporting retail given that the site does not propose any additional retail and the scale of the site is smaller than the proposed submission allocation. It would score less positively on objective G) meeting

site with the proposed submission preferred alternative.	housing needs with a positive effect (+2) rather than significant positive effect given the smaller scale of development proposed. All other objectives are considered to have the same post mitigation scoring. A summary matrix is provided below.
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the conservation area some distance west of the site and a grade II listed Chapel Cemetery some distance to the north which were not previously noted in the SA. It is however considered by the HEA that development in this location would have no anticipated heritage impact.	No change to the SA.
Changes to the Plan	
No changes to the Plan are recommended. Alternative 1 provides less benefit than the proposed submission allocation and is therefore not preferred.

CRE7 Stonewall Lane

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the same heritage elements as the SA but in terms of	The score in the SA would remain as 0/? given the mitigation is already noted in the policy.

Creedy Park it suggests mitigation through appropriate design and landscaping. Appropriate design and landscaping is recognised by the policy but it is not clear that this is relation to Creedy Park. As such a change to the supporting text is proposed to clarify the requirement of appropriate landscaping to ensure protection of heritage assets associated with the adjoining Creedy Park.	
Changes to the Plan	
A change to the supporting text of the Plan is recommended to provide clarity that adequate landscaping is provided to ensure the protection of heritage assets associated with the adjoining Creedy Park.	

Summary Matrix – CRE7 Stonewall Lane

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CRE8 Barn Park

No comments under CRE8 are considered to give rise to alternatives to be considered in this annex.

CRE9 Alexandra Close

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
Sustainability Appraisal Comments	
1. The SA did not previously fully consider the impact on the high street through developing on the west of the town. Developing on the west would increase traffic through the high street as most likely destinations for journeys are either Exeter or Tiverton. Whilst some mitigation could be provided, the impact of	This would impact the pre-mitigation score for objective I) Infrastructure, to be -1 with the post-mitigation score remaining as 0, given that the site is only for 15 dwellings. It should however also be noted that developing in the west will have an impact on the secondary/cumulative/synergistic effects where incremental

developing sites on the east side of the town is likely to be much lesser than any on the west. Officer comment	development in the west of the town will have a cumulative effect on the traffic through the high street, discussed in annex 1. There would be a greater negative effect on objective H) ensuring community health and wellbeing due to the negative impact on air quality from developing to the west however given the scale of this site the score is considered to remain the same. This new information will also impact the scores for OCRE10 and OCRE11 which are discussed under 'Crediton Alternative Options' below.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – CRE9 Alexandra Park

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CRE10 Land south of A377

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'support the principle of the allocation but object to settlement limit as should be extended to fully cover the land within planning permission (ref 09/00244/MOUT); land is unquestionably suitable for a development allocation given planning history, established adjoining uses and accessible location.'* An alternative is therefore considered which includes a small area	The increase in site area would amend the SA score for objective C) mitigating the effects of climate change to a pre-mitigation score of -2/? and a post-mitigation score would remain as 0/?. This is due to the increased area of flood zone 2 and advice from the EA that there could be increased flood risk to parts of the site covered by previous outline consents (alternative 3). Mitigation can be provided by design and new information set out in alternative 2 however this is still uncertain as the extent of flood risk is unknown.

to the south of the allocation up the edge of the swale, covered by recent consent sought by Mole Avon reflecting the permission above.	
New Information	
2. A representation was made during the Local Plan Review Proposed Submission consultation and stated that the *'Policy would be sounder if it referred to the need to ensure that ground and floor levels are set at sufficiently high enough level to cater for flood risk from the River Yeo.'*	New information provided by the EA has indicated that this area is at greater risk of flooding than indicated at the time of the original permissions which covered the wider Tesco site. This new information would result in a greater negative pre-mitigation score to -2/?, however the post mitigation score would remain as 0/? as the supporting text will make reference to the latest flood data and implications from redevelopment with mitigation measures such as layout, site and floor levels.
3. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Consider the policy unsound - proposed allocation subsumes grade II listed farm complex and alters setting. Historic Environment Appraisal needed to assess the likely impact which the development will have on the listed buildings at Wellparks and Downes House Park and Garden. If concludes there is harm, provide mitigation and if still harm justify allocation as per NPPF paragraphs 133 and 134.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies Wellparks grade II listed buildings located to the north west of the site which were not previously identified by the SA. The Downes Historic Park and Garden is also identified, although this is already recognised in the SA, development was previously considered to have no impact. However the HEA notes that there would be some potential impact on the two heritage assets which were not previously identified by the SA. As such the pre-mitigation score for objective b) built and historic environment, is proposed to be changed to a negative (-2) impact rather than neutral (0). Mitigation is suggested through sensitive

	design with appropriate choice of materials and landscaping which has been included in the supporting text of the policy. The post-mitigation score therefore would remain a neutral effect.
Changes to the Plan	
Alternative 1 is proposed as a modification to the plan. Although the scoring is lower for the pre-mitigation score of objective c) mitigating the effects of climate change, it is considered appropriate and reasonable to allocate the site area which has outline consent and mitigation can be afforded to reduce the impact of flood risk. A Flood Risk Assessment will need to be submitted with any application on the site which will need to incorporate both a comprehensive level survey of the site's current arrangement, and additional modelling taking into account current levels. Alternative 2, related to alternative 1 is also proposed as a modification to the plan to reflect the new information presented by the EA which will help provide mitigation. Alternative 3 is also proposed as modification to the plan to ensure mitigation in the form of sensitive design with appropriate choice of materials and landscaping. With this mitigation the scores remain identical to the proposed submission policy site therefore a summary matrix is not provided below.	

Summary Matrix - CRE10 Land South of A377

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CRE11 Crediton Infrastructure

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that *'the policy would be more effective if 'provision of works to reduce flood risk' were included in the list.'*	This alternative would result in a greater positive impact on objective C) Mitigating the effects of climate change. Overall with the positive impact of this criterion CRE11 scores +3 post mitigation.
Changes to the Plan	
Alternative 1 is considered beneficial and therefore is proposed as a modification to the plan.	

Summary Matrix - CRE11 Crediton Infrastructure

Crediton Alternative Options

Options to the West of the Crediton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
Sustainability Appraisal Comments	
1. The SA did not previously fully consider the impact on the high street through developing on the west of the town. Developing on the west would increase traffic through the high street as most likely destinations for journeys are either Exeter or Tiverton. Whilst some mitigation could be provided, the impact of developing sites on the east side of the town is likely to be much lesser than any on the west. Officer comment	This would impact the scores for the alternative OCRE10 Westwood Farm in which the pre-mitigation score for objective I) Infrastructure, will be -2 and post-mitigation is considered to be -1 rather than neutral score to take into account the cumulative negative effect of traffic through the high street by developing to the west of the town. It will also impact OCRE11 Land at Chapel Down Farm in which a pre-mitigation score will be -3 and the post-mitigation score overall is considered to be -1. This takes into account existing proposed mitigation set out in the SA but the incremental negative effect of traffic through the high street. The impact of developing to the west of the town on air quality was previously considered in the SA, as such no change to the score or supporting text to objective H) is considered. Developing to the west Crediton is also discussed in annex 1 of this SA update.
Changes to the Plan	
It is considered that the comment made on the SA is beneficial to understand of the impact developing to the west of Crediton. The changes to the SA are therefore considered reasonable to include, however the amendment does not lead to any changes to the Plan.

Land at M5 Junction 27

Policy J27, Land at Junction 27 of the M5 motorway

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. On the 22nd September 2016 Full Council resolved to propose an allocation of 71 hectares between M5 Junction 27 and Willand for mixed commercial floorspace including a travel hub, agronomy visitor centre, outdoor adventure zone and outlet shopping village. The policy includes transport provision, environmental protection, a comprehensive phasing programme and public master planning exercise. In comparison to the Proposed Submission Sustainability Appraisal option, this commercial option encompasses a smaller site area, a number of the town centre uses have been withdrawn and new information has been provided to determine the retail impact. Taking the policy amendments and new information into account the allocation has been reappraised.	In comparison to the proposed submission M5 Junction 27 option, overall the site scores more positively for objective a) protection of the natural environment, d) safeguarded and minimising resource use and f) supporting retail. The proposed submission option scores more positively for objective h) as the option was previously considered as an alternative for a new community and provided community facilities. This is no longer proposed. Objective c) scoring has also been updated which was previously scored as a neutral although uncertain effect, upon review for both the preferred and alternative option they score a slight negative effect in considering additional trips will be generated from the development of this site.
New Information	
2. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identified that there are listed buildings close to the site and there may be some impact the immediate settings of these buildings. To	The new information has been reflected in the commentary of the Junction 27 full appraisal however the changes have not affected the scores pre or post mitigation.

some degree there will be an impact on the registered park and garden at Bridwell which is set on rising land to the east. To a limited degree the landscape settings of Sampford Peverell conservation area and the Grand Western Canal conservation area will also be affected. There is some uncertainty in the exact impact of the allocation given this will be dependent on site layouts, density, scale and design of buildings. This site occupies a substantial area within a landscape that has evidence of prehistoric and Roman activity, overall a negative and uncertain effect.	
3. A retail impact assessment has been carried out which included an assessment of 14 towns and city centres including those outside of Mid Devon District and concluded that all centres would continue to achieve higher future trading turnovers than the assessment year. The study also sets out how designer outlet villages differ from that in town centres and how they can be controlled by planning.	Given the changes proposed to the policy and the findings of the retail impact assessment, the proposal significantly enhances the retail offer of the district and therefore a significant positive impact is considered.
Sustainability Appraisal Comments	
4. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'Each score for J27 & Willand is expressed at a '?'. Because of this it is questioned whether sufficient assessment has been carried out to reach a conclusion'.* This comment is relevant to both J27 commercial and residential options.	As noted in the SA methodology, in some instances where specific data was not available at the time of the SA assessments an uncertain effect has been identified. The exact impact in some cases will only be quantified at a planning application stage where detailed site based studies are undertaken based on the proposals. However information available at the time of the SA would give an indication whether the impact would be positive or negative, the question mark recognises

Hallam Land Management (4386)	that further studies would lead to greater certainty of impact. Where uncertainty is indicated the reasons for which are provided in the commentary as part of each SA appraisal. No change is considered.
5. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'SA landscape impacts of J27 given the scale of housing should be same as growth at Cullompton'.* This comment is relevant to the J27 residential option. Hallam Land Management (4386)	A landscape and visual appraisal was undertaken in 2014 focussing on the strategic site options as set out in the Local Plan Review evidence base. Using this evidence, J27 and the strategic option at Cullompton have been scored using the landscape and visual impacts specific to each site, rather than purely based on the scale of development. No change is considered.
6. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'Conversely to J28 in part I), J27 is stated as a negative effect which remains uncertain. SA fails to have regard to the Railway station which is accessible by foot and cycle, has existing bus routes and a cycle path running through it. It is close to existing schools and services.'* This comment is relevant to both J27 commercial and residential options. Hallam Land Management (4386)	A transport assessment is required to determine the exact impact of the development on transport hence an uncertain effect. The mitigation commentary already recognises the proximity of the site to the railway station and notes the provision of a dedicated bus and pedestrian route to the station. Therefore post-mitigation the score is positive when taking these features into account, although with an element of uncertainty for reasons set out above.
7. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'In comparing J27 and J28. Both cannot be determined until a retail impact assessment is carried out, but J27 scores -3 and J28 scores +1 against the same criteria'.* This comment is relevant to J27 commercial option. Hallam Land Management (4386)	The proposal at J27 has a significant commercial element proposed in comparison to the option at J28. Early indications raised concerns from neighbouring authorities regarding the impact on existing town centres. As such, a negative score was indicated. The J28 option 'East Cullompton' does not provide the level of retail as proposed in the J27 commercial option as such the impact was not considered to be as significant. However since the Proposed Submission Sustainability

	Appraisal a retail impact assessment has been carried out which concludes that given the criterion and controls in the proposed modifications policy all centres would continue to achieve higher future trading turnovers than the assessment year and as such the SA finds that the impact on objective f) Supporting retail will therefore be positive.
8. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'J27 should score higher than J28 on D) safeguarding and minimising resource use. Reason for a -3 at J27 fall on the potential constraint on future working at Hillhead Quarry. Believe this location has questions over viability of any such extraction'.* This comment is relevant to J27 commercial option. Hallam Land Management (4386)	As indicated by the uncertain scoring and the commentary, the questions over viability of extraction of Hillhead Quarry have been noted in the SA. However in considering the smaller allocation of land at Junction 27 and the updated Devon County Council Minerals Plan (proposed for adoption) it is now considered that the development of the site will not constrain future working of the remaining permitted reserves within Hillhead Quarry.
Changes to the Plan	
Option 1 is proposed as a change to the Plan. The proposed policy of a smaller site area with the new information provided results in the improved scoring in a number of objectives including retail impact. As such it is considered the proposal is beneficial and is proposed for allocation.

Rural Areas

Bampton

BA1 Newton Square, Bampton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation by Historic England and stated *'Objection – development harms elements identified as important within Conservation Area Appraisal, which have not been considered within the Sustainability Appraisal; Historic Environment Appraisal needs to be undertaken to assess if there is harm and if so to suggest mitigation.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the same elements as the SA in terms of objective b) protection and promotion of a quality and built and historic environment. It notes that comments from Historic England may have incorrectly located the proposed allocation as being within an orchard referenced in the conservation area appraisal when in fact it is beside it. The HEA also notes that the impact on the setting of any listed building is likely to be minimal. The SA already identifies mitigation in the policy to ensure the Conservation Area is protected. No change to the SA is proposed.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – BA1 Newton Square, Bampton

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

BA2 Stone Crushing Works (Scott's Quarry), Bampton

No comments under BA2 are considered to give rise to alternatives to be considered in this annex.

BA3 Ashleigh Park, Bampton

No comments under BA3 are considered to give rise to alternatives to be considered in this annex.

Bampton Alternative Options

School Close, Bampton (proposed for allocation BA4)

Reasonable Alternative Proposed	
1. Allocation for 0.54(ha) 26 dwellings. The site was omitted in error.	Overall the site scores a neutral or positive score with regard to the objectives considered as part of this SA with the exception of objective D) safeguarding and minimising resource use which scores a slight negative -1 due to a small proportion of the site covering agricultural grade 3 land. As this site omitted in error a full appraisal is provided in annex 3 and summary matrix is provided below.
Changes to the Plan	
Alternative 1 is proposed a modification to the plan. The site scores either a neutral or positive score in all objectives in the SA with the exception of objective D) safeguarding and minimising resource use in which a slight negative score -1 is considered due to a small proportion of the site covering agricultural grade 3 land. The site is currently allocated and was omitted in error as some of the site has been built out. For consistency, similar to other sites in the plan, the remaining area of the allocation which has not yet been built is proposed to remain as an allocation in the plan.

Bow

BO1 Land adjacent to Hollywell, Bow

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic	No change to the SA.

environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies there are many listed buildings in the centre of Bow and the village also has a conservation area which was not previously noted in the SA. However it states that these are some distance from the site which is unlikely to impact upon them.	
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – BO1 Land adjacent to Hollywell, Bow

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

BO2, West of Godfreys Gardens, Bow

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies there are many listed buildings in the centre of Bow and the village also has a conservation area which was not previously noted in the SA. However it states that these are some distance from the site which is unlikely to impact upon them.	No change to the SA.
Changes to the Plan	

No changes to the Plan are proposed.

Summary Matrix – BO2 West of Godfreys Gardens, Bow

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Bradninch

BR1 Hele Road, Bradninch

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that the site is opposite a locally listed heritage asset which was not previously identified in the SA. However, the HEA notes that although the asset's larger setting may be affected by development in this location, the asset's significance is not based on this larger setting and so the impact is low.	No change to the SA is proposed given that the impact to the heritage asset is considered to be low.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – BR1 Hele Road, Bradninch

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Chawleigh

CH1 Barton, Chawleigh

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that *'Proposed allocation has potential to harm setting of Grade 1 church and conservation area; historic appraisal needed to reassess impact, if harm concluded set out mitigation, if harm still present justify allocation.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that there are a number of listed buildings to the south and east of the site, including the grade I Church of St James which was not previously identified by the SA. The pre-mitigation score for objective b) the built and historic environment is proposed to be amended to -3/? from -2/? to take into account the potential impact on the listed building identified. The HEA suggests mitigation through high quality design of the development together with a landscape buffer on the east side of the site. If this is provided for the post-mitigation score will remain the same as 0/?
Changes to the Plan	
A change to the Plan is proposed to include an additional criterion to state 'design solutions which respects the setting of the conservation area and listed building'. An amendment to the supporting text is also proposed to ensure appropriate landscaping to mitigate any potential impact on the conservation area and listed buildings.	

Summary Matrix – CH1 Barton, Chawleigh

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Cheriton Bishop

CB1 Land off Church Lane, Cheriton Bishop

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that the listed Old Rectory is located some distance to the north as well as the Cheriton Bishop Conservation Area which was not previously noted in the SA. However the HEA notes that there is no anticipated heritage impact.	No change to the SA is proposed.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – CB1 Land off Church Lane, Cheriton Bishop

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Cheriton Fitzpaine

CF1 Barnshill Close, Cheriton Fitzpaine

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA recognises that the site forms a significant location in terms of the entry to the more historic core of the village which was not previously identified in the SA. However the HEA recommends good design will likely mean minimal impact to the setting of the listed buildings and conservation area.	This would amend the pre-mitigation score to a slight negative -1 score. If good design is recognised to minimise the impact on the conservation area and listed buildings a neutral post mitigation score remains.
Changes to the Plan	
A change to the Plan to reflect the new information presented in alternative 1 in which good design should be used to ensure minimal impact to the setting of the historic environment is proposed.	

Summary Matrix – CF1 Barnshill Close, Cheriton Fitzpaine

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CF2 Land adjacent school, Cheriton Fitzpaine

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal

New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that *'Objects as infilling will ruin character of historic linear settlement.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA doesn't recognise the potential issue raised by the representation, as such no change to the SA or the Plan is proposed.
Sustainability Appraisal Comments	
2. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they '*Questions positive +1 scoring given under Objective B for CF2 'Land adj school' but absence of similar score for OCF2 'Landboat Farm' (given 0) for increasing connectivity between main village and White Cross. Also states weight given to C19 farm buildings have little remaining value as historic assets'.* Garside Planning Services (3645)	The +1 score for CF2 'Land adj school' under objective B) is to reflect the improved connectivity between White Cross and the village. It is agreed that site OCF2 would also improve connectivity between White Cross and the village and therefore the SA scoring would be changed to +1 to reflect this as set out in the table below. However it is not accepted that the historic buildings on site have no heritage value. At the time of the proposed submission SA the C19 buildings referred to in the representation were not listed as heritage assets and although were acknowledged did not hinder the score of the objective for this site. However more recent advice from the conservation team identifies that the 19th century buildings are 'pending' to be formally added to the list of heritage assets, as such if the buildings are assessed as heritage assets, the scoring of the SA will be amended to reflect this. No change to the SA with regard to CF2.
3. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Object to site and states that potential for landscape and visual impact is*	The school site (CF2) is on moderately higher ground that the objection site. However, within the context of the local landscape, both are relatively contained, with higher ground to north of

greater than OCF2 particularly at western end of the site which would be visible from public highway; development of this site would break the skyline.' Garside Planning Services (3645)	proposed allocation and to south of objection site, with few opportunities for views in from long distances. The school site is visible from the public highway, but there is existing development along the south side of the road and buildings to the east and the school to the west. These buildings screen much of the site from views and provide a degree of mitigation to visual impact. Presence of dwellings on south side of highway means that skyline when viewed (from very limited viewpoints to south) is unlikely to be significantly altered. No change to the SA is proposed.
4. A representation was made during the Local Plan Review Proposed Submission consultation and stated that there is *'No current access to site, construction of which would have negative impact on visual amenity, as opposed to OCF2 which has existing access.'* Garside Planning Services (3645)	There is a long site frontage on which to accommodate the appropriate visibility splays in a manner which minimises visual impact. This can be considered at design stage. No change to the SA is proposed.
Changes to the Plan	
None of the alternatives are preferred, as such no changes to the Plan are proposed. Alternative 2 is discussed in the table below on OCF2 Landboat Farm.	

Summary Matrix – CF2 Land adjacent school, Cheriton Fitzpaine

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Cheriton Fitzpaine Alternative Options
OCF2 Landboat Farm, Cheriton Fitzpaine

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
Sustainability Appraisal Comments	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Disagree with -2 (pre-mitigation) scoring for OCF2 'Landboat Farm' and states should be same or better than CF2 'Land adj school' which is -1 for sustainability objective A. States landscape impact is not as great as stated, given limited scope for views to Raddon Hills. States open space south of Cherry Meadow acted as visual buffer to working farm but that function no longer required given relocation of facility elsewhere. States any trees lost could be made up by planting elsewhere. Visual impact is lesser than objection site due to presence of existing access point, and mitigation provided by existing development to west and east'.* Garside Planning Services (3645)	Additional site visits to both CF2 and OCF2 has enabled a re-examination of the potential impact against Objective A 'Protection of the natural environment'. Appraisal of the potential landscape impacts of the sites conclude that they are both relatively contained within the context of the local landscape. Higher ground exists to the north of this proposed allocation and to the south of the objection site, but there are few opportunities for views into either site from public access points. Both sites have built development on their boundaries which will provide some level of mitigation. The commentary within the SA for OCF2 has been amended to reflect this revision. The potential loss of trees is still a potential negative impact for OCF2 and therefore a -1 pre-mitigation score is proposed. However, both sites already have a 0 post-mitigation score which is considered to still apply given that other policies ensure appropriate mitigation of any harmful impacts.
2. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they '*Question positive +1 scoring given under Objective B for CF2 'Land adj school' but absence of similar score for OCF2 'Landboat Farm'*	The +1 score for CF2 'Land adj school' under objective B) reflects improved connectivity between White Cross and the village. It is agreed that site OCF2 would also improve connectivity between White Cross and the village and therefore the SA scoring is proposed

(given 0) for increasing connectivity between main village and White Cross. Also states weight given to C19 farm buildings have little remaining value as historic assets'. Garside Planning Services (3645)	to be changed to +1 to reflect this for both pre and post mitigation. However it is not accepted that the historic buildings on site have no heritage value. At the time of the proposed submission SA the C19 buildings referred to in the representation were not listed as heritage assets and although were acknowledged did not hinder the score of the objective for this site. However more recent advice from the conservation team identifies that the 19th century buildings are 'pending' to be formally added to the list of heritage assets, as such if the buildings are assessed as heritage assets, the scoring of the SA will be amended to reflect this.
3. A representation was made during the Local Plan Review Proposed Submission consultation and stated *'Objective C, questions significance given to presence of Flood Zones 2 and 3 in scoring of OCF2 'Landboat Farm'. States area was only included due to arbitrary drawing of the site boundary by the planning authority. Area could be omitted from any allocation. Questions rationale for site being given negative score as opposed to CF2 'Land adj school' site'.* Garside Planning Services (3645)	In comparing the sites, OCF2 does contain Flood Zones 2 and 3 in part. The NPPF states that planning should guide development to the areas of lowest flood risk. Sequentially therefore CF2, being 100% Flood Zone 1 is preferable. The commentary does acknowledge that the areas within the flood zones in OCF2 could be excluded as set out in the post-mitigation commentary and scoring. No change is proposed.
4. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Question scoring given to Objective E 'Promoting economic growth and employment. States farm buildings are redundant, following relocation of dairy business elsewhere'.* Garside Planning Services (3645)	Additional site visits have highlighted that the farm buildings are indeed vacant and have been for some time. They are generally in a derelict state with no evidence of recent use. It is not considered that there would be a loss of employment land and the pre-mitigation score is proposed to be amended to 0. The post-mitigation score remains as 0 as mitigation in the appraisal suggested mitigation

	measures for the initially identified negative effect on this objective.
5. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Disagree with the amount of potential development possible at OCF2, Landboat Farm, given that part of site is within settlement limit, and that a similar density should be assumed to the proposed allocation to ensure like-for-like comparison'.* Garside Planning Services (3645)	Potential allocations went through a SHLAA panel process which provided recommendations on the technical capacity of each site. For consistency the same approach was used for all alternative sites. The scoring system has not 'hindered' this site in relation to the allocation CF2 'Land adj school' as both sites received a +2 post mitigation score against Objective G 'Meeting housing needs'. No change is proposed.
6. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Question - 1 score given to Objective H: Ensuring community health and wellbeing. States main reason for this is because site includes public open space which would be lost, but states as this is within settlement limit should not form part of consideration, and that loss has been overplayed. States that site could equally, as set out for CF2 'Land adj school' improve community cohesion through linking part of the village with White Cross and ensure short walking distances to school'.* Garside Planning Services (3645)	The potential loss of the public open space buffer is a consideration before mitigation. Disagree that it should not be considered as it's within the settlement limit. Its loss would present a negative impact. However on balance given the space did not form a formal designated open space area a pre-mitigation score of -1 rather than -2 was considered. In this Annex as noted in the table for CF2 above, OCF2 has community benefits of linking White Cross similar to CF2 which should be acknowledged. As a result it is proposed that the pre-mitigation score be improved to a neutral effect on balance. A post-mitigation score of +1 is now proposed provided that the loss of public open space can be mitigated.
7. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Question - 1 score given to pre-mitigation score for Objective I: Delivering the necessary infrastructure, compared with 0 for CF2 'Land adj school' when conclusion is that an adequate access is achievable for both'.* Garside Planning Services (3645)	The original site assessment was based on advice at the time that OCF2 would require additional works due to the restrictive alignments. However further site visits to both sites has identified that both sites can equally accommodate an access without significant works. Therefore an amendment is proposed to the pre-mitigation score to 0. The post-mitigation score remains as 0.

Changes to the Plan
No changes to the plan are proposed. The Local Plan Review allocates sufficient land for residential development to meet the district's housing need. The site scores similarly to the preferred alternative CF2 however the preferred alternative is sequentially preferable given that it's 100% Flood Zone 1 and avoids any loss of public open space. Although only two post-mitigation scores were slightly amended following the comments on above, a number of pre-mitigation scores have been changed, as such for clarity a full appraisal is provided in annex 3.

OCFNEW Bramble Orchard, Cheriton Fitzpaine

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation which objected to plan allocations and submitted new land for housing and provision of alternative footpath for school use.	A full site appraisal has been provided for this option which can be found in annex 3 with a summary of scores provided below. The site scores more negatively than the preferred sites in Cheriton Fitzpaine on Objective A) protection of the natural environment, B) built and historic environment H) community health and well being and I) delivering the necessary infrastructure. The site is not preferred given there is likely to be a detrimental impact on the landscape and is divorced from the main settlement. There are also concerns around the provision of delivering the necessary infrastructure in which the topography and road widths result in a poor forward visibility from the site. The highway authority advises that the site should be rejected accordingly.
Changes to the Plan	
No changes to the plan are proposed. The highway authority advises that this site should be rejected.

Halberton

HA1 Land adjacent Fishers Way, Halberton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that *'Site is less preferable to 'The Pethers' which is not within an area of archaeological potential, not at risk of flooding from groundwater or Grand Western Canal, and has better access to road network.'*	The site 'The Pethers' has been appraised and discussed in a table below. New information for HA1 with regard to the area of archaeological potential since the Proposed Submission Local Plan Review SA has been made available. The Devon County Council Archaeology Team has confirmed that the scale and situation of the proposed allocation will not impact on any known heritage assets and state that they would not need to be consulted should an application come forward. Therefore both the pre-mitigation and post-mitigation scores have been amended to result in a less negative score to reflect this new information. The overall the pre-mitigation score is considered to be a slight negative impact given the potential impact on the conservation area as discussed in alternative 2 below. If mitigation is provided a post-mitigation neutral score remains although this is no longer uncertain.
2. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA recognises some potential impact on the setting of the Halberton	This new information would affect the pre-mitigation score in which taking into account new information presented in alternative 1 above and the new information in this alternative an overall slight negative (-1) score is considered. If mitigation through appropriate design, materials and landscaping is proposed a post-mitigation score of 0

Conservation Area which was not previously identified by the SA. The HEA recommends appropriate design, materials and landscaping as mitigation to protect the setting of the conservation area.	remains.
Changes to the Plan	
A change to policy HA1 is proposed to delete reference to the need to 'archaeological investigations and appropriate mitigation measures' given the new information provided by the Devon County Council Archaeology Team that the proposed allocation will not impact on any known heritage assets and state that they would not need to be consulted should an application come forward. A change to the supporting text of HA1 is proposed to ensure mitigation through appropriate design, materials and landscaping to protect the setting of the Halberton conservation area and historic environment.

Halberton Alternative Options

OHA1 Land at Blundells Road, Halberton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
Comments on Sustainability Appraisal	
1. A representation was made during the Local Plan Review Proposed Submission consultation and commented on the post mitigation score for objective A *'Disagree that screening should result in a mitigation score of 0'.* Individual (4447)	The mitigation score references S9 Environment and DM1 High Quality Design policies in the Local Plan Review. Screening may form part of the mitigation but would also include other criteria as set out in S9 and DM1. Policies in the Local Plan Review would be considered alongside any potential allocation, these policies provide mitigation of impacts to protect the natural environment; as such it was considered that there should be an improvement of the score of -1 pre-mitigation to 0 post-mitigation. No change is proposed.
2. A representation was made during the Local Plan Review Proposed Submission consultation and commented on the post mitigation score of objective B. *'The level of listing should be considered and argue that it is difficult to be confident of the outcome as there are unknowns through the mitigation elements of design and archaeological investigation'.* Individual (4447)	The listed buildings within the site have been considered as part of the impact on objective B. The 'level of listing' isn't considered to impact the scoring which is consistent with other appraisals in the SA although the presence of listed buildings has affected the pre-mitigation score. The post-mitigation score suggests that with appropriate mitigation a neutral score could be accomplished, however it is recognised there is a level of uncertainty particularly in considering the outcomes of the archaeological investigation which is recognised by '?' in the post-mitigation scoring column. No change is considered.
3. A representation was made during the Local Plan Review	The score referred to by the individual is the post-mitigation score.

Proposed Submission consultation and commented on the post mitigation score of objective B. *'Disagree with the equal scoring of Halberton, Land at Blundells Road and the preferred HA1 site for objective B as Halberton, Land at Blundells Road is within the Halberton conservation area and within the view of a grade II* listed building'.* Individual (4447)	Each site is different, and have different elements identified in objective B which covers a range of potential issues. The original scores and commentary recognises Halberton, Land at Blundells Road being within the conservation area and potential impact on nearby listed buildings. The equal scoring of the two sites following mitigation is due to responses which can help mitigate each impact. Although the impacts are different it was considered that it was possible to provide mitigation for each potential impact. No change is proposed.
4. A representation was made during the Local Plan Review Proposed Submission consultation and commented on the post mitigation score of objective C. *'Do not agree with the +1 score as there is an unknown impact and the benefits of the bus service should not improve the score'.* Individual (4447)	The scoring identifies that inherent with the watercourse there is a level of uncertainty through the indication of a '?'. The post-mitigation +1 score was provided as mitigation could neutralise the impact of the watercourse and the bus service was considered as a slight benefit of the location of the site. Consistent with other sites appraised in the SA, recognising the provision of a bus service in rural areas helps to differentiate between similar sites across Mid Devon, with some in locations with a bus service and others without. As the objective is considering climate change, the availability of sustainable modes of transport is an appropriate consideration in the sustainability of a site location. No change is considered.
5. A representation was made during the Local Plan Review Proposed Submission consultation and commented on the post mitigation score of objective I. *'Disagree that the post mitigation score should be 0 as it is unknown even if it is accompanied with a question mark'.* Individual (4447)	The post-mitigation score and commentary is to help identify whether the impact of the development can be mitigated and improve the overall score of the site. In this case the score post-mitigation was 0 based on the factors that could help reduce the impact of the development. A question mark is also used to recognise that there is some uncertainty until further detail is provided. No change is

	considered.
Changes to the Plan	
None of the comments above are considered beneficial, therefore no change to the Plan or the SA scoring is proposed.	

Summary Matrix – OHA1 Land at Blundells Road, Halberton

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

OHANEW The Pethers, Halberton

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
Comments on Sustainability Appraisal	
1. A representation was made during the Local Plan Review Proposed Submission consultation and commented that they *'object to the inclusion of HA1 site and offers preferable alternative'*. Compares site with Sustainability Appraisal scoring of HA1 Site. Argues that the new site is preferable over proposed allocation as has less archaeological potential, less likelihood of flooding and better access. Garside Planning Services (3645)	A full appraisal of the site has been undertaken which can be found in annex 3 with a summary matrix provided below. The site scores similarly to HA1. A benefit to HA1 is that it has an existing access whereas this new site does not although the scores in the SA remain the same for the post-mitigation score in objective I) Delivering the necessary infrastructure as access can be achieved for this site.
Changes to the Plan	
HA1 was identified as the preferred site of Halberton Parish Council and the Local Plan Review allocates sufficient land for residential development to meet the district's housing need. No change is therefore proposed as the site is not preferential in replacement of the preferred site.

Hemyock

HE1 Depot, Hemyock

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and brought forward new information in which *'Family member resident on site wishes to*	Given representations made during the Local Plan Review Proposed Submission (2015) consultation, the site is proposed for deletion as comments made raises an issue with the potential deliverability of the

see it developed, but not in near future. Does not currently consider site deliverable due to third party access issues and landowners intention to continue trading'.	site and therefore the site is no longer considered a reasonable alternative. The site will have a limited impact on the Local Plan Review as a whole given its size and may still come forward as a windfall site as it falls within the settlement limit. This will have a limited impact on the sustainability of the plan as a whole given the scale of the site.
Changes to the Plan	
HE1 is proposed to be deleted from the plan as it is no longer considered a reasonable alternative given the representations made during the Local Plan Review questions its deliverability.	

Summary Matrix – HE1 Depot, Hemyock

A summary matrix is not provided, the new information presented raises questions over the deliverability of the site and is proposed for deletion. This will have a limited impact on the sustainability of the plan as a whole given the scale of the site.

Morchard Bishop

No reasonable alternatives are proposed for allocations in Morchard Bishop.

Newton St Cyres

NE1 Court Orchard, Newton St Cyres

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential	The impact on the conservation area would amend the pre-mitigation score from -1/? to a -2/? score to take into account the potential detrimental impact on the setting and approach to the conservation

development and suggests mitigation where appropriate. The HEA notes that the site lies adjacent to the recently extended boundary of the Newton St Cyres conservation area. This was not previously identified in the SA. The HEA suggests that the proposed site would have a detrimental impact on the setting and approach of the conservation area. It suggests that access into the site will need careful design and landscaping to link in with existing trees and hedges together with good design and appropriate materials would offset much of the visual impact. It also notes that grade II Lower Creedy Bridge lies to the north. This was not previously identified in the SA, however it notes that the setting of Creedy Bridge does not appear to be compromised.	area. With mitigation through careful design of the access and landscaping to link with existing trees and hedges the 0/? post-mitigation score remains. The uncertain effect is due to the archaeological potential already identified in the SA.
Changes to the Plan	
A change the policy and supporting text is proposed to ensure design which respects the setting of the conservation area.	

Summary Matrix – NE1 Court Orchard, Newton St Cyres

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Newton St Cyres Alternative Options

ONENEW New Estate Site A, Newton St Cyres

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and submitted additional land which was argued to have *'no significant constraints and is*	A full appraisal of the site has been undertaken which can be found in annex 3 with a summary matrix provided below. The site scores lower in comparison to the preferred site in Newton St Cyres in objective I)

immediately available and deliverable'.	providing the necessary infrastructure. Of particular note are the concerns around access and safety with the highways authority recommending this site be rejected on those grounds. The site is therefore not preferred.
Changes to the Plan	
No changes are proposed to the Plan. The site is not preferred with particular issues around access and safety with the highways authority recommending this site be rejected on those grounds.

Sampford Peverell

SP1 Former Tiverton Parkway Hotel, Sampford Peverell

No comments under SP1 are considered to give rise to alternatives to be considered in this annex.

OSP1 Higher Town, Sampford Peverell (Proposed for allocation SP2)

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. National planning policy acknowledges the importance of ensuring housing numbers and employment opportunities are considered	In comparison to the alternative considered during the Local Plan Review Proposed Submission (2015) this alternative scores more

in tandem. In response to this full Council on 22nd September 2016 resolved to allocate land at Higher Town for residential development of 60 dwellings. The policy has been amended to reflect the latest evidence and has been reappraised taking these findings into account. A full appraisal has been provided in Annex 3 and a summary matrix is provided below.	positively or the same in all aspects. The new appraisal takes into account new information in which there has been confirmation that access is achievable. Criteria have been included in the policy to ensure landscaping and design respects the setting and character of the area, conservation area and listed building. These elements were already noted in the proposed submission SA as such most of the scores remain the same.
New Information	
2. Since the Proposed Submission Sustainability Appraisal there has been confirmation that access is achievable and therefore the uncertainty has been removed.	This new information removes the uncertainty previously attached to objective I) delivering the necessary infrastructure and the score is now proposed to be neutral.
3. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that the site is adjacent to Sampford Peverell Conservation Area to North East. The site occupies an area enclosed in the medieval period and archaeological remains associated with the earlier field system and archaeological remnants may be affected by development here.	The SA recognises the impacts identified in the HEA and provision in the policy is provided to ensure mitigation.
Changes to the Plan	
A change to the Plan is proposed to include SP2 Higher Town allocation.

Sandford

SA1 Fanny's Lane, Sandford

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and commented that a *'Historic environment appraisal is required to assess impact of development*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and

on listed church and conservation area, if concludes harm to set out mitigation, and if harm remains need to justify public benefits'.	suggests mitigation where appropriate. It identifies the same elements in the SA and suggests the same recommendation for mitigation to ensure a buffer strip of open space or planting to protect the setting of the listed Park House and Sandford Conservation area. Good design is also recommended to avoid the domination of views and to retain the setting of the historic core of the church in particular which already forms a criterion in policy. Therefore no change is proposed to the SA or the Plan.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – SA1 Fanny's Lane, Sandford

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Silverton

SI1 Land at Old Butterleigh Road, Silverton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and commented that they *'Object as development would lead to loss of old Devon hedge and/or destroy historically important part of village'.*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA does not identify the elements raised in the representation and notes that there is no anticipated heritage impact. No change to the SA is proposed.

Changes to the Plan
No changes to the Plan are proposed.

Summary Matrix – SI1 Land at Old Butterleigh Road, Silverton

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

SI2 The Garage, Silverton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA notes that the site is no longer in the conservation area (following a 2015 revision) but now lies to the south west of the boundary. It also notes that 'Channons' in close proximity is likely to become a locally listed heritage asset. The HEA overall states that there is no anticipated heritage impact.	Given the new information set out in the HEA the pre-mitigation score is proposed to change from a negative (-2) to a slight negative (-1) score for objective B. A post-mitigation slight negative (-1) score remains due to the location of the site divorced from the main body of the village as discussed in the proposed submission SA.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – SI2 The Garage, Silverton

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Thorverton

TH1 South of Broadlands, Thorverton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Alternative for 1.15 ha and 20 dwellings. A representation was made during the Local Plan Review Proposed Submission consultation which suggested that the *'site area should be extended to incorporate allotment land, which could be provided elsewhere (subject to demand); could increase housing provision, make use of existing access and omit need for road widening/footpath creation and loss of hedgerow'.* In response to this representation an alternative of 1.15 ha including the allotment land to the west for a total of 20 dwellings has been considered.	The pre-mitigation score for this alternative scores lower in objective H) ensuring community health and wellbeing due to the loss of allotments, and I) delivering the necessary infrastructure due to a need for the road to be built to an adoptable standard and the access road would need to go through garages currently near the site. The issues identified could be mitigated in which this site scores almost identically to the proposed submission site, however there is greater uncertainty in this mitigation. If the relocation of the allotments is provided for this would result in a +1/? post-mitigation score for objective H). This is uncertain given that the site for the relocation of the allotments has not been indicated. If road improvements were made the issues identified in objective I) could be mitigated however this is uncertain given that this requires the garages are in control of the applicant, given the garages are not in control of the applicant an uncertain effect remains. Furthermore the mitigation required is much greater than the preferred policy which could make this option prohibitive.
Changes to the Plan	
Alternative 1 is not preferred. Although this site scores an identical post mitigation score as the preferred site, greater mitigation would be required to enable this alternative to be acceptable and there is greater uncertainty in the delivery of this site. The option to avoid the	

relocation of allotments is preferable and the mitigation required for the road improvements has the potential to make this option prohibitive when compared with the proposed access set out in the preferred approach. The mitigation for the road improvements for the alternative option would also need the garages to be in control of the applicant, which they are currently not.

Thorverton Alternative Options

OTHNEW Land north east of Silver Street, Thorverton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review	A full appraisal of the site has been undertaken which can be found in

Proposed Submission consultation and submitted additional land which was argued to have *'no significant constraints and is immediately available and deliverable'.*	annex 3 with a summary matrix provided below. The site scores similarly to the preferred site. It scores slightly more positively on objective c) mitigating the effects of climate change and slightly less positively on objective h) ensuring community health and well-being. Although there does not appear to be significant sustainability issues with this site individually, the cumulative impact of allocating this site in addition to the site preferred in the Local Plan Review could lead overcapacity issues in the local schools.
Changes to the Plan	
No changes are proposed to the Plan. The Local Plan Review allocates sufficient land for residential development to meet the district's housing need. The addition of this site in Thorverton could lead to a negative cumulative impact on the capacity of local schools.

OTHNEW Land to the west of Lynch Close and Cleaves Close, Thorverton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and submitted additional land which was argued to have *'no significant constraints and is immediately available and deliverable'.*	A full appraisal of the site has been undertaken which can be found in annex 3 with a summary matrix provided below. The site scores similarly to the preferred site. It scores slightly more positively on objective g) meeting housing needs and slightly less positively on objective h) ensuring community health and well-being. The site proposes more housing development than other options in Thorverton, as such it may not be possible to accommodate the number of pupils arising from the development in the existing school and developer contributions would be required for expansion. Although there are opportunities for mitigation the impact on the adjoining grade II listed building may be a constraint for the site.
Changes to the Plan	
No changes are proposed to the Plan. The Local Plan Review allocates sufficient land for residential development to meet the district's housing need. The site is less preferred given the potential impact on the capacity of the primary school and the impact on the listed building adjoining, although it is noted there are options for mitigation.

Uffculme Alternative Options

OUF3 – Land west of Uffculme

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Land with a gross site area of 3.49 (ha) for 60 dwellings, 35% affordable.	The site has been reappraised given the conclusions of the inspectors report. A full appraisal can be found in Annex 3. The site scores more

This alternative has been considered following an appeal decision in February 2016 allowing outline planning permission for a site of 3.49ha with 60 dwellings.	positively to the Proposed Submission SA appraisal in post-mitigation scores in objective b) built and historic environment; taking into account the inspectors comments a neutral effect is considered rather than a negative effect. It also scores more positively in objective h) Ensuring community health and wellbeing taking into account the Inspector's comments. A neutral rather than a slight negative effect is considered.
Sustainability Appraisal Comments	
1. A representation was made during the Local Plan Review Proposed Submission consultation and commented on objective B) protection and promotion of a quality built and historic environment. *'Recent application refused but consultation response from Devon County Council [on archaeology] advises imposition of a condition. Therefore this [archaeology] is not an issue that strikes at the principle of development of the site'.* Messrs Persey and Harding c/o Jillings-Hutton (4654)	The condition requested refers to archaeological considerations. This has been reflected in the post-mitigation score for objective B. The score for objective B considers various elements related to the built and historic environment including but not limited to archaeology. No change is proposed with regard to the comment on archaeology however it should be noted that for objective B) built and historic environment, in taking into account the inspectors comments as discussed in alternative 1 a neutral effect is considered rather than a negative effect. A full appraisal is provided in annex 3 and summary matrix is provided below.
2. A representation was made during the Local Plan Review Proposed Submission consultation and commented on objective C) mitigating the effects of climate change. *'Recent application refused but consultation response from Environment Agency highlights no objection. None of proposed housing within application was on flood zone 2 or 3'.* Messrs Persey and Harding c/o Jillings-Hutton (4654)	The scoring when considering flood zones is set out on page 193 of the Proposed Submission SA. The SA aims to apply a consistent approach to scoring across the various sites proposed in Mid Devon. In this case some areas of the site fell within in areas of flood zone 2 and 3 and therefore initially scored slightly lower than other sites which did not include any areas of flood zone 2 or 3. However the site was redrawn to exclude areas in flood zone 2 or 3. This was reflected

	in the post-mitigation score for objective C 'mitigating the effects of climate change'. No change is proposed with regard to the comment in alternative 2.
3. A representation was made during the Local Plan Review Proposed Submission consultation and commented on objective H) ensuring community health and wellbeing. *'Disagree that a walk to school of around a mile is adverse. Site is not preferred in SA as would lead to long walking distances to village facilities'.* Messrs Persey and Harding c/o Jillings-Hutton (4654)	As noted by the commentary of the SA it is considered that the location of the site is approximately 1 mile to the primary school which could restrict young children walking to school. The Institute for Highways and Transportation Guidelines for 'acceptable' walking distances, state that for education up to 500m is the preferred distance and up to 1km is an acceptable distance. The nearest edge of the proposed site to the school is almost 1.5km to the primary school. Therefore at the time of appraising the site it was considered appropriate that a slight negative effect is considered in relation to this objective. However the site has been reappraised following the 2016 appeal decision, in which the Inspector stated that in his view the appeal site was within an acceptable and safe walking distance of the village services and facilities. As such overall a neutral effect rather than slight negative effect is considered for objective H) ensuring community health and wellbeing.
Changes to the Plan	
A change to the Plan is proposed to allocate the site as set out in the appeal decision discussed in alternative 1.

Willand

WI1 Land east of M5, Willand

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Alternative of 14.8ha of 174 dwellings. A representation was made during the Local Plan Review Proposed Submission consultation which suggested that the *'allocation should be increased to 174 dwellings - is stated to be suitable, available and deliverable with no technical or*	A full appraisal is provided in annex 3 and a summary matrix is provided below. The proposed alternative scores lower overall on objectives A) protection of the natural environment, D) safeguarding and minimising resource use and H) ensuring community health and wellbeing. The alternative scores more positively on objectives E)

landownership constraints; represents 'infill' between M5 and remainder of village; appropriate buffer zone and planting, as well as protection of habitats would be required' In response to this representation, the site area proposed in the submission was used to determine the area of the site and an alternative allocation of 14.8ha of 174 dwellings has been considered.	promoting economic growth and employment and G) meeting housing needs.
Changes to the Plan	
Alternative 1 is not preferred, although there are some benefits to this alternative in terms of meeting housing needs and a slight positive impact on promoting economic growth and employment, the scale of development results in a greater negative scores on a number of objectives and in terms of a strategic preferred approach, development of this scale in the villages would not reflect a sustainable pattern of distribution in accordance with the NPPF. The cumulative impacts in rural areas are also heightened particularly when large scale development is proposed in villages for example on the road infrastructure or primary school capacity.

WI2 Willand Industrial Estate

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Full allocation of 9.2ha 22,000 sqm of commercial floorspace. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'proposed deletion of remainder of phase 1 commercial is premature, removal of phase 2 is understood, though the site may be used to relocate a nearby business'.*	This alternative scores slightly less positively on objective A) protection of the natural environment as it is a larger site abutting the M5 and therefore will be more visible. However it scores higher in objective E) promoting economic growth and employment as it provides more commercial floorspace. An error was found in the assessment for the preferred site in the Proposed Submission SA

In response to this representation the original allocation has been reconsidered. The Proposed Submission SA did not provide a full site appraisal for the full allocation given the preferred allocation formed part of the original site. Therefore in reconsidering this alternative a summary matrix is provided below with full appraisal provided in annex 3.	where the 2.2ha site proposed for 8,800 should have scored a +2 not +3 as set out in the appraisal guidance p.192 of the SA. A summary matrix is provided below.
2. Allocation as residential development. Representations were made during the Local Plan Review Proposed Submission consultation which suggested the site would be appropriate for residential development. In response to these representations an alternative of WI2 Willand Industrial Estate allocated as a residential development has been considered for 53 dwellings	This alternative would result in a less positive scores in in objective B) protection and promotion of the built and historic environment, E) promoting economic growth and employment and H) ensuring community health and wellbeing. The alternative scores more positively on objective G) meeting housing needs. A full appraisal is provided in annex 3 and summary matrix is provided below.
Changes to the Plan	
Alternative 1 is a proposed as a modification to the plan. The Council's original reasons for not allocating the full site have been addressed as the remainder of the site is now deliverable, with access to Phase 2 having been secured. The viability of delivering employment units in this location, which was another of the Council's concerns, is addressed by information provided as part of the proposed submission consultation. A planning application has also been submitted covering the entirety of phase 2. Given the likely development of the site and the benefit of providing additional commercial floorspace on objective E) promoting economic growth and employment it is considered beneficial to allocate the full site. Alternative 2 is not preferred. The site is not suitable for residential development, being surrounded on three sides by existing and forthcoming employment development.

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'DM28 SA should include compensatory measures as part of policy.'* Environment Agency (943)	This comment was made on the SA however the comment is more relevant to a change to the policy within the Plan rather than the SA. Compensation would result in a neutral effect on the environment in which the proposed alternative would not result in any change to scoring of the SA.
Changes to the Plan	
Although the proposed change would not impact on the SA score it is considered that the comment is beneficial and an amendment to the policy is proposed to set out that compensatory measures in some cases may be considered appropriate where mitigation measures are not possible.	

Summary Matrix – DM28 Other protected sites

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

DM29 Enforcement

No comments under DM29 are considered to give rise to alternatives to be considered in this annex.

Miscellaneous

Sport England provided a response as part of the Local Plan Review Proposed Submission Consultation (2015) in which they suggested an alternative to the following policies to reflect Active Design principles and implementation:

- S1 Sustainable Development priorities
- S9 Environment
- TIV1 Eastern Urban Extension
- TIV6 Farleigh Meadows
- CU1 NW Cullompton
- CU7 East Cullompton
- DM1 High Quality Design
- DM12 Design of Housing

It is considered that the relevant principles are already generally reflected in the plan policies, for example S1, S5 and DM1. Reference to all active design principles in the policies above would be unnecessary and out of context and therefore is not preferred. This has not been appraised as it is considered the active design principles are already incorporated and would not overall amend the sustainability of the Local Plan.

Annex 3 Additional Reasonable Alternative Appraisals

This annex sets out the full appraisals undertaken as part of this Sustainability Appraisal update.

Strategic Policies

Additional Appraisals for S2 Amount and Distribution of development

Preferred Option S2: Amount of Residential Development - Meet Housing Need with Junction 27 additional housing requirements (7,860 dwellings)

This option for the amount of residential development is to meet the objectively assessed housing needs over the plan period following the latest SHMA figure which identifies a need of 7600 dwellings rather than the 7200 as previously indicated in the proposed submission document. It also provides for the additional housing in response to the employment allocation at Junction 27 which is a preferred policy option in this Local Plan Review. The sustainability of the 7860 alternative is considered to fall between alternatives 7600 and 8000 which are assessed below. However the proposed change to the housing amount is not considered significant enough to enable a meaningful comparison; as such it is considered that the alternative of 7860 will score the same as the option to meet the objectively assessed housing need of 7600. A full appraisal is provided below for completeness.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This is a housing target set at a level to meet the objectively assessed need of Mid Devon with two additional sites in response to the housing requirements of allocating the Junction 27 commercial option. It is capable of being met without negatively impacting significantly on the existing environmental limits of the districts towns and villages. The SHLAA has identified a sufficient number of alternative sites to avoid adverse environmental impact. The level of impact on this objective will be dependent on individual proposals but is considered to be neutral in this scenario.	0	The policy should be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
B) Protection and promotion of a quality built and historic environment	This approach will have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality design which supports the positive contribution of new development to local character.	0
C) Mitigating the effects of climate change	The construction of new homes and catering for a greater population can increase carbon emissions; however there may be opportunities by meeting housing needs to enhance features such as walking and cycling provision for the community as a whole. Opportunities to reduce flood risk; promote low carbon or renewable energy and create low carbon buildings also arise. This option may have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies such as sustainable design.	0
D) Safeguarding and minimising resource use	A housing target set at a level to meet the objectively assessed need of Mid Devon with the additional housing required in response to the allocation of Junction 27 is capable of being met while still safeguarding and minimising resource use. The SHLAA has identified some alternative sites on brownfield land but will still require the loss of some of the highest grades of agricultural land if development is	-2	This policy should be read in the context of other policies in the plan, for example sustainable design. A negative effect is anticipated post mitigation.	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	directed towards the towns. The level of impact on this objective will be dependent on individual proposals but is considered to be negative in this scenario.			
E) Promoting economic growth and employment	An increase in residential development would benefit the local economy and increase the number of local people to the working pool. A positive impact.	+1		+1
F) Supporting retail	This policy will have a positive contribution towards achieving this objective as an increase in population would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres.	+1		+1
G) Meeting housing needs	This policy will have a significant positive contribution towards achieving this objective. The key purpose of this policy is to meet the housing needs of the district. The policy meets the objectively assessed housing needs target of 7,600 as well as the additional housing requirement in response to the proposed allocation at Junction 27. It also promotes balanced communities by encouraging an appropriate mix of housing such as affordable housing, housing designed for the elderly and gypsy and traveller pitches.	+3	This option should also be read in the context of other policies in the plan which aim to meet the demand for services and facilities of the community.	+3
H) Ensuring community health and wellbeing	The policy helps to reduce barriers to housing by meeting the diverse housing needs of the district and is therefore likely to have at least a minor positive contribution to this objective. The option does not however proactively aim to meet the variety of indices in this option.	+1	The option should however be read in the context of other policies which support community health and	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	The impact on the provision of open space, limiting air, noise and light pollution and promoting safe and secure environments is unknown.		wellbeing.	
I) Delivering the necessary infrastructure	A housing target set at a level to meet the objectively assessed need of Mid Devon with the additional housing requirement in response to the Junction 27 option is capable of being met without negatively impacting on the delivery of necessary infrastructure. The two additional sites at Blundells School, Tiverton and Higher Town, Sampford Peverell are able to provide the infrastructure required in-step with development. Transport evidence confirms a new junction onto the M5 at Cullompton is technically feasible and that infrastructure requirements can be met. This policy approach could have some positive or some negative impacts on delivering the necessary infrastructure. The level of impact will be on a site by site basis.	0	The policy should be read in the context of other policies which aim to deliver the necessary infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan.	0

Secondary/cumulative/synergistic effects:	A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Alternative Option S2: Amount of Residential Development - Meet Housing Need (7,600 dwellings)

This option for the amount of residential development is to meet the objectively assessed housing needs over the plan period following the latest SHMA figure which identifies a need of 7600 dwellings rather than the 7200 as previously indicated in the proposed submission document.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This housing target is set at a level to meet the objectively assessed need of Mid Devon is capable of being met without negatively impacting on the existing environmental limits of the districts towns and villages. The SHLAA has identified a sufficient number of alternative sites to avoid adverse environmental impact. The level of impact on this objective will be dependent on individual proposals but is considered to be neutral in this scenario.	0	The policy should however be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	The construction of new homes and catering for a greater population can increase carbon emissions; however there may be opportunities by meeting housing needs to enhance features such as walking and cycling provision for the community as a whole. Opportunities to reduce flood risk; promote low carbon or renewable energy and create low carbon buildings also arise. This option may have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies such as sustainable design.	0
D) Safeguarding and minimising resource use	A housing target set at a level to meet the objectively assessed need of Mid Devon is capable of being met while still safeguarding and minimising resource use. The SHLAA has identified some alternative sites on brownfield land but will still require the loss of some of the highest grades of agricultural land if development is directed towards the towns. The level of impact on this objective will be dependent on individual proposals but is considered to be negative in this scenario.	-2	This policy should be read in the context of other policies in the plan, for example sustainable design. A negative effect is anticipated post mitigation.	-2
E) Promoting economic growth and employment	An increase in residential development would benefit the local economy and increase the number of local people to the working pool. A positive impact.	+1		+1
F) Supporting retail	This policy will have a positive contribution towards achieving this objective as an increase in population would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	This policy will have a significant positive contribution towards achieving this objective. The key purpose of this policy is to meet the housing needs of the district. The policy meets the objectively assessed housing needs target of 7,600 and promotes balanced communities by encouraging an appropriate mix of housing such as affordable housing, housing designed for the elderly and gypsy and traveller pitches.	+3	This option should also be read in the context of other policies in the plan which aim to meet the demand for services and facilities of the community.	+3
H) Ensuring community health and wellbeing	The policy helps to reduce barriers to housing by meeting the diverse housing needs of the district and is therefore likely to have at least a minor positive contribution to this objective. The option does not however proactively aim to meet the variety of indices in this option. The impact on the provision of open space, limiting air, noise and light pollution and promoting safe and secure environments is unknown.	+1	The option should however be read in the context of other policies which support community health and wellbeing.	+1
I) Delivering the necessary infrastructure	A housing target set at a level to meet the objectively assessed need of Mid Devon is capable of being met without negatively impacting on the delivery of necessary infrastructure. Transport evidence confirms a new junction onto the M5 at Cullompton is technically feasible and that infrastructure requirements can be met. This policy approach could have some positive or some negative impacts on delivering the necessary infrastructure. The level of impact will be on a site by site basis.	0	The policy should be read in the context of other policies which aim to deliver the necessary infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan.	0

Secondary/cumulative/synergistic effects:	A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC. As such a policy option which has less development proposed is considered reach the similar conclusions.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Alternative Option S2: Amount of residential development - Lower growth scenario (7,200 dwellings).

The development needs of the community will be met through the provision of approximately 7,200 dwellings between 1 April 2013 and 31 March 2033. This would be a slightly lower growth scenario than the 7,600 figure to meet the objectively assessed housing needs as indicated in the SHMA. This figure was originally published before the final figures of the SHMA were set. As such the SA has been amended to reflect the deficit of 400 dwellings over the plan period to meet the objectively assessed housing need of Mid Devon when pursuing this scenario.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	A housing target set at a level slightly lower than the objectively assessed need of Mid Devon is capable of being met without negatively impacting on the existing environmental limits of the districts towns and villages. The SHLAA has identified a sufficient number of alternative sites to avoid adverse environmental impact. The level of impact on this objective will be dependent on individual proposals but is considered to be neutral in this scenario.	0	The policy should however be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity	0

A	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	directed towards the towns. The level of impact on this objective will be dependent on individual proposals but is considered to be negative in this scenario.		negative effect is anticipated post mitigation.	
E) Promoting economic growth and employment	An increase in residential development would benefit the local economy and increase the number of local people to the working pool. A positive impact	+1		+1
F) Supporting retail	This policy will have a positive contribution towards achieving this objective as an increase in population would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres.	+1		+1
G) Meeting housing needs	This policy will have a positive contribution towards achieving this objective. The policy meets a significant proportion of the housing needs of the district but not the whole need and therefore has a positive impact rather than significant positive impact. The housing needs target of 7,200 promotes balanced communities by encouraging an appropriate mix of housing such as affordable housing, housing designed for the elderly and gypsy and traveller pitches.	+2	This option should be read in the context of other policies in the plan which aim to meet the demand for services and facilities of the community.	+2
H) Ensuring community health and	Helps to reduce barriers to housing by meeting the diverse housing needs of the district and is therefore likely to have at least a minor positive contribution to this objective. The option does not however	+1	The option should however be read in the context of other policies which support	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
wellbeing	proactively aim to meet the variety of indices in this option. The impact on the provision of open space, limiting air, noise and light pollution and promoting safe and secure environments is unknown.		community health and wellbeing.	
I) Delivering the necessary infrastructure	A housing target set at a level slightly lower than the required level to meet the objectively assessed need of Mid Devon is capable of being met without negatively impacting on the delivery of necessary infrastructure. Transport evidence confirms a new junction onto the M5 at Cullompton is technically feasible and that infrastructure requirements can be met. This policy approach could have some positive or some negative impacts on delivering the necessary infrastructure. The level of impact will be on a site by site basis.	0	The policy should read in the context of other policies which aim to deliver the necessary infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan.	0

Secondary/cumulative/synergistic effects:	A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC. As such a policy option which has less development proposed is considered reach the similar conclusions.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet a significant proportion of the housing needs across the district.

Alternative Option S2: Amount of residential development - Intermediate Higher Growth Scenario (8,000 dwellings).

The development needs of the community will be met through the provision of approximately 8,000 dwellings between 1 April 2013 and 31 March 2033. This is a higher level of growth than is needed during the plan period and therefore would provide an additional 400 dwellings above the objectively assessed need.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	An intermediate higher growth scenario is likely to be more difficult to distribute between the towns while avoiding environmental impacts. The towns of Tiverton and Crediton are both reaching their landscape limits as they are contained in natural topographical bowls. Current development is at or just below these thresholds and significant future development may exceed capacity under this scenario. The intermediate higher growth would not necessarily result in the need to the strategic development to the east of Tiverton but would require greater development in the 3 main towns and/or villages, as such a slight negative effect is considered.	-1	The policy should however be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved.	0
B) Protection and promotion of a quality built and historic environment	A intermediate higher growth scenario will have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality design which supports the positive contribution of new development to local character.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	The construction of new homes and catering for a greater population can increase carbon emissions; however there may be opportunities by meeting housing needs to enhance features such as walking and cycling provision for the community as a whole. Opportunities to reduce flood risk; promote low carbon or renewable energy and create low carbon buildings also arise. Similar to the existing policy this option may have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies such as sustainable design.	0
D) Safeguarding and minimising resource use	A intermediate higher growth scenario is likely to be more difficult to distribute between the towns while safeguarding and minimising resource use. Option is likely to put greater pressure on the supply of brownfield sites and therefore require further greenfield developments. Similarly there are areas of the highest grades of agricultural land around the towns of Tiverton and Cullompton. The level of impact on this objective will be dependent on individual proposals. Given the additional land required to provide for the additional housing a negative effect is considered.	-2	This policy should be read in the context of other policies in the plan, for example sustainable design. A negative effect is anticipated post mitigation.	-2
E) Promoting economic growth and employment	An increase in residential development would benefit the local economy and increase the number of local people to the working pool. A slight positive impact.	+1		+1
F) Supporting	This policy will have a positive contribution towards achieving this	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
retail	objective as an increase in population would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres.			
G) Meeting housing needs	This policy will have a significant positive contribution towards achieving this objective. The key purpose of this policy is to meet the housing needs of the district. The policy meets the housing needs target of 7,600 and exceeds it by setting a target of 8,000 dwellings. The impact of this policy on existing services and facilities is unknown as this will be on a site by site basis. This approach is considered to have a significant positive impact on housing provision in the District.	+3	This option should be read in the context of other policies in the plan which aim to meet the demand for services and facilities of the community.	+3
H) Ensuring community health and wellbeing	The policy helps to reduce barriers to housing by meeting the diverse housing needs of the district and is therefore likely to have at least a minor positive contribution to this objective. The option does not however proactively aim to meet the variety of indices in this option. The impact on the provision of open space, limiting air, noise and light pollution and promoting safe and secure environments is unknown.	+1	The option should however be read in the context of other policies which support community health and wellbeing.	+1
I) Delivering the necessary infrastructure	An intermediate growth scenario is likely to be more difficult to distribute between the towns while delivering the necessary infrastructure. This policy approach could have some positive or some negative impacts on delivering the necessary infrastructure. The level of impact on this objective will be dependent on individual	-1	The policy should read in the context of other policies which aim to deliver the necessary infrastructure. Any proposals will also have to abide to the	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	proposals but is considered to be a slight negative in this scenario.		infrastructure policy in the plan. A slight negative effect is anticipated post mitigation due to the difficulty of distributing development across the towns and villages whilst providing the necessary infrastructure in-step.	

Secondary/cumulative/synergistic effects:	There could be a cumulative impact of a higher growth scenario on delivering the necessary infrastructure. The impact of this policy option will be dependent on the scale and location of individual proposals. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC. Given this option would be greater than that proposed in the preferred option an updated Habitat Regulations Assessment would be required to determine the cumulative impact on the integrity of European sites around Mid Devon.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Alternative Option S2: Amount of residential development - Higher Growth Scenario (8,400 dwellings).

The development needs of the community will be met through the provision of approximately 8,400 dwellings between 1 April 2013 and 31 March 2033.This is a higher level of growth than is needed during the plan period and therefore would provide an additional 800 dwellings above the objectively assessed need.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	A higher growth scenario may be more difficult to distribute between the towns while avoiding environmental impacts. The towns of Tiverton and Crediton are both reaching their landscape limits as they are contained in natural topographical bowls. Current development is at or just below these thresholds and significant future development may exceed capacity under this scenario. In the case of Tiverton, only one strategic direction is available to the east and this option has some landscape impact. The level of impact on this objective will be dependent on individual proposals but is considered to be negative in this scenario.	-2	The policy should however be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved. A slight negative effect is still anticipated post mitigation given the higher growth scenario for this plan period.	-1
B) Protection and promotion of a quality built and historic	A higher growth scenario will have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality	0

	impacts on delivering the necessary infrastructure. The level of impact on this objective will be dependent on individual proposals but is considered to be significantly negative in this scenario given that the additional development is of an equivalent scale to a strategic allocation which is likely to require significant additional infrastructure above that already committed in the Local Plan.		infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan. A negative and uncertain effect is anticipated post mitigation given the potential for significant infrastructure required however the impact is uncertain as it would be dependent on the location of development and the nature of the infrastructure required. Given the level of development proposed a number of proposals in rural areas are likely to be required where they may be a number of smaller roads which may require upgrading. However the level of development in any one location may not be of the quantum to result in sufficient funding to enable	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			full mitigation as such a negative but uncertain impact is considered.	

Secondary/cumulative/synergistic effects:	There could be a cumulative impact of a higher growth scenario on delivering the necessary infrastructure. The impact of this policy option will be dependent on the scale and location of individual proposals. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC. Given this option would be greater than that proposed in the preferred option an updated Habitat Regulations Assessment would be required to determine the cumulative impact on the integrity of European sites around Mid Devon.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Alternative Option S2: Amount of residential development - Elevated Higher Growth Scenario (8,800 dwellings).

The development needs of the community will be met through the provision of approximately 8,800 dwellings between 1 April 2013 and 31 March 2033.This is a higher level of growth than is needed during the plan period and therefore would provide an additional 1200 dwellings above the objectively assessed need.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	A higher growth scenario is likely to be more difficult to distribute between the towns while avoiding environmental impacts. The towns of Tiverton and Crediton are both reaching their landscape limits as they are contained in natural topographical bowls. Current development is at or just below these thresholds and significant future development may exceed capacity under this scenario. In the case of Tiverton, only one strategic direction is available to the east and this option has some landscape impact. The level of impact on this objective will be dependent on individual proposals but is considered to be significantly negative in this scenario as it would result in additional development of an equivalent scale to a strategic allocation.	-3	The policy should however be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved. A negative effect is still anticipated post mitigation given the higher growth scenario for this plan period.	-2
B) Protection and promotion of a quality built and historic environment	A higher growth scenario will have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality design which supports the	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			positive contribution of new development to local character.	
C) Mitigating the effects of climate change	The construction of new homes and catering for a greater population can increase carbon emissions; however there may be opportunities by meeting housing needs to enhance features such as walking and cycling provision for the community as a whole. Opportunities to reduce flood risk; promote low carbon or renewable energy and create low carbon buildings also arise. Similar to the existing policy this option may have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies such as sustainable design.	0
D) Safeguarding and minimising resource use	A higher growth scenario is likely to be more difficult to distribute between the towns while safeguarding and minimising resource use. Option is likely to put greater pressure on the supply of brownfield sites and therefore require further greenfield developments. Similarly there are areas of the highest grades of agricultural land around the towns of Tiverton and Cullompton. The level of impact on this objective will be dependent on individual proposals. Given the additional land required to provide for the additional housing a significant negative effect is considered.	-3	This policy should be read in the context of other policies in the plan, for example sustainable design. A significant negative effect is anticipated post mitigation.	-3
E) Promoting economic	An increase in residential development would benefit the local economy and increase the number of local people to the working	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
growth and employment	pool. A slight positive impact.			
F) Supporting retail	This policy will have a positive contribution towards achieving this objective as an increase in population would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres.	+1		+1
G) Meeting housing needs	This policy will have a significant positive contribution towards achieving this objective. The key purpose of this policy is to meet the housing needs of the district. The policy meets the housing needs target of 7,600 and exceeds it by setting a target of 8,800 dwellings. The impact of this policy on existing services and facilities is unknown as this will be on a site by site basis. This approach is considered to have a positive impact on housing provision in the District.	+3	This option should be read in the context of other policies in the plan which aim to meet the demand for services and facilities of the community.	+3
H) Ensuring community health and wellbeing	The policy helps to reduce barriers to housing by meeting the diverse housing needs of the district and is therefore likely to have at least a minor positive contribution to this objective. The option does not however proactively aim to meet the variety of indices in this option. The impact on the provision of open space, limiting air, noise and light pollution and promoting safe and secure environments is unknown.	+1	The option should however be read in the context of other policies which support community health and wellbeing.	+1
I) Delivering the necessary	A higher growth scenario is likely to be more difficult to distribute between the towns while delivering the necessary infrastructure.	-3	The policy should read in the context of other policies which	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
infrastructure	This policy approach could have some positive or some negative impacts on delivering the necessary infrastructure. The level of impact on this objective will be dependent on individual proposals but is considered to be significantly negative in this scenario given that the additional development is of an equivalent scale to a strategic allocation which is likely to require significant additional infrastructure above that already committed in the Local Plan.		aim to deliver the necessary infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan. A negative and uncertain effect is anticipated post mitigation given the potential for significant infrastructure required however the impact is uncertain as it would be dependent on the location of development and the nature of the infrastructure required. Given the level of development proposed a number of proposals in rural areas are likely to be required where they may be a number of smaller roads which may require upgrading. However the level of development in any one location may not be of the quantum to result in	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			sufficient funding to enable full mitigation as such a negative but uncertain impact is considered.	

Secondary/cumulative/synergistic effects:	There could be a cumulative impact of a higher growth scenario on delivering the necessary infrastructure. The impact of this policy option will be dependent on the scale and location of individual proposals. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC. Given this option would be greater than that proposed in the preferred option an updated Habitat Regulations Assessment would be required to determine the cumulative impact on the integrity of European sites around Mid Devon.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Alternative Option S2: Distribution of development - Rural focussed.

Option concentrates greater development in rural areas with some development in the three main towns. Development in rural areas would be allocated in settlements designated as villages under S13 of the Local Plan Review. The spread of development would be 30% in Tiverton, 21% at Cullompton, 10% in Crediton and the remaining 39% in rural areas. This alternative was raised by a representation at the proposed submission stage, as such it has be assessed as part of the SA as an alternative option.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The strategy concentrates development in rural areas with some continued provision in the three main towns. The strategy is likely to impact the landscape and rural setting of villages with the level of development proposed. There may be opportunities for enhancement of landscape character and biodiversity, but this is likely to be on an individual site basis and would be recognised at the post-mitigation stage. As the level of development proposed could result in development disproportionate to the scale of a village in a rural setting and would as such lead to significant landscape impacts a significant negative effect is considered.	-3	The protection of the natural environment is justified in policies elsewhere in the plan and there may be some opportunities for enhancement of landscape character and biodiversity on an individual site basis. However as the development would be of a scale which the impact on the rural setting and landscape would not be avoidable in a number of cases a negative effect is considered.	-2
B) Protection and promotion of a quality	New development in towns and villages has the potential to have a negative impact on the historic environment located in and around these settlements. There may however be some opportunities for a	-3	The protection of the historic environment is justified in policies elsewhere in the plan	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
built and historic environment	positive effect through enhancement of heritage assets and local distinctiveness, but this is likely to be on an individual site basis and will be assessed at the post-mitigation stage. In terms of the impact on villages there is likely to be a significant negative impact in which although some development proposed could be easily absorbed into a rural setting bringing benefits to a village, the level of development proposed is at a scale which would be disproportionate to the size of the villages identified in policy S13.		and some mitigation can be provided on a case-by-case basis in which heritage assets and local distinctiveness will be enhanced. However due to the scale of development over the lifetime of the plan is at a level disproportionate to the size of the villages identified in policy S13 a negative effect remains.	
C) Mitigating the effects of climate change	By focussing new build development in rural areas, this will increase the need to travel and therefore increase greenhouse gas emissions. There may be some opportunities for flood mitigation and promotion of low carbon and renewable energy measures, but this is likely to be on an individual site basis, for example through design and will be considered at the post-mitigation stage. As some development will still occur in the towns but a significant proportion will be delivered in villages a negative effect overall is considered.	-2	There would overall be a slight negative effect considered post mitigation given that there may be opportunities for some flood mitigation and promotion of low carbon and renewable energy measures however this remains uncertain as this will be dependent on individual applications. As a large proportion of development	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			would be in villages but coupled with the fact that some development will remain in the towns and the potential for opportunities for climate change mitigation the impact is reduced and a slight negative effect is considered.	
D) Safeguarding and minimising resource use	The option scores negatively towards safeguarding and minimising resource use as it focuses new development in villages in which would likely result in the loss of greenfield development and loss of some of the best and most versatile agricultural land. The agricultural land classification of all available village allocations ranges from grade 1 to brownfield land. The majority of sites fall in the bracket of grade 3 agricultural land and therefore overall a negative effect is considered.	-2	Policy should be read in conjunction with other policies within the plan and Devon County Council Waste Plan including those that set out the waste hierarchy.	-2
E) Promoting economic growth and employment	This option will have a positive effect as it increases jobs and reduces out commuting by focusing commercial floorspace at existing main towns and settlements. The option also supports rural business by providing commercial floor space in villages. This option will help meet the employment needs of the district and enhance the economy in general while encouraging inward investment and future prosperity. The main towns have good connection to the	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	strategic road network for storage and distribution uses.			
F) Supporting retail	Focusing development in the main towns and larger villages will support the vitality and viability of existing town centres and shopping facilities in the larger villages. Retail provision could be provided but this is not outlined as a policy requirement. A slight positive effect is considered.	+1		+1
G) Meeting housing needs	The strategic option will meet the anticipated housing needs target for the district, a significant positive effect. Housing is concentrated at the villages where there are some services and facilities with the rest of the proposed development to be provided at the main towns where existing services and facilities are located.	+3		+3
H) Ensuring community health and wellbeing	The level of development proposed in rural areas may be disproportionate to the level of development a village can absorb. Although allocations would only be proposed in villages which meet the essential criteria set out in S13 as such a negative rather than significant negative effect is considered. Some development would also still occur in the main towns and villages which would allow for access to community facilities, open space and recreation. The option would focus development away from Crediton and Cullompton which are designated air quality management areas which would result in some positive impact. The option however would lead to greater light and noise pollution, particularly in villages where the scale of the development is greater than what	-3	Provision of community facilities, open space and recreation and air quality mitigation is justified in policies elsewhere in the plan and provide some mitigation for the lack of mention of community service and facilities. An overall negative effect remains as the rural distribution implied by the suggested alternative infers	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	might be easily absorbed by the existing scale of the village. The policy does not mention the provision of open space, sport or recreation or the reduction of crime. Overall a significant negative effect given the disproportionate level of development at villages which may impact on local services and facilities and without the quantum of development in one location to provide a full range of new services and facilities.		that there would not be the quantum of development in any one location to provide a full range of new services and facilities.	
I) Delivering the necessary infrastructure	Option does not contribute towards the efficient use of existing infrastructure as it focusses growth in villages which although can support some growth the level of development proposed is disproportionate to the existing size of the villages which are often connected to the road network by B or C roads. There are potential road capacity issues which would require improvements across Mid Devon as development would be spread across the villages rather than being focussed in key locations. As development would be spread across Mid Devon, there is likely to be a need in more than one primary education facility for improvements. Given pressures on education and road infrastructure a significant effect is anticipated.	-3	The provision of infrastructure is justified in policies elsewhere in the plan. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities. Given the volume of areas that would require upgrading, mitigation in some cases may be limited as such a negative effect remains. This is uncertain given the number of proposals in rural areas although the sites are viewed	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			as deliverable the cumulative effect would depend on the site proposals and location in the district.	

Secondary/cumulative/synergistic effects:	A number of mitigation measures are suggested which are covered by other policies in the plan. The Local Plan Review should be read as a whole and would mitigate the sustainability issues which cross-reference across the plan. There may be a greater cumulative impact on the road network as there would not be the quantum of development in one location to enable the improvement of a single junction or access such as the options for a strategic allocations would allow, therefore at a number of points across the district there may be a greater level of traffic but limited funds for improvements.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option meets the housing and commercial needs for the district. Distribution is dispersed with 39% proposed in rural areas.

Alternative Option S2: Distribution of development - Tiverton and Crediton Focussed.

Option concentrates development at Tiverton with maximum provision at Crediton based on the availability of sites. As such the breakdown of distribution is as follows: 48% Tiverton, 21% Cullompton, 15% Crediton, 16% Rural Areas. This distribution is based on a proposed alternative from a representation at the Proposed Submission stage requesting a higher development figure at Crediton whilst removing East Cullompton urban expansion. By removing the East Cullompton allocation 2100 dwellings would need to be redistributed. Using the highest capacity

figures for all the available sites in Crediton a maximum figure of 1047 has been derived with the rest of the development distributed to Tiverton and Rural Areas. As such this option would result in a Tiverton and Crediton focussed option with greater development in rural areas. For the purposes of the SA, development using this distribution would assume major development at Hartnoll Farm as the only suitable, available and achievable option in Tiverton and the allocation of all potential Crediton sites to the maximum capacity.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The strategy continues to concentrate development at the districts main towns of Tiverton, Cullompton and Crediton. The policy acknowledges that development will be to a scale and mix appropriate to their individual infrastructures, economies, character and constraints. Development opportunities at Tiverton and Crediton are constrained by topography and the potential for landscape impact. This strategy accepts that a Tiverton and Crediton focussed approach would only be achievable with strategic growth at Hartnoll Farm as Tiverton's only suitable, available and achievable site. The Hartnoll Farm site is bordered by the Grand Western Canal Conservation Area to the south and east of the site. The canal is also a County Wildlife Site and Local Nature Reserve. Development of the site would have a potential significant visual impact and would impact on the biodiversity and habitats of the area. This strategy option accords with the aspirations of the NPPF to prevent isolated new homes and to protect and enhance valued landscapes. There may also be opportunities for enhancement of landscape character and biodiversity, but this is likely to be on an	-3	The protection of the natural environment is justified in policies elsewhere in the plan. At Hartnoll Farm the policy requires environmental protection and enhancement which will help mitigate any negative impact on this objective by the development of this site. Land adjacent the Grand Western Canal will need to be protected as Green Infrastructure. Because some slight negative effects will remain with regard to Hartnoll Farm post mitigation in combination with the location of some of the Crediton sites	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	individual site basis. Given the potential landscape and environmental impact at Hartnoll Farm in particular as well as other larger sites on the edge of the main towns an overall negative impact is considered. It would also result in the development of all potential sites available for allocation in Crediton to the maximum capacity. Given the topographical constraints some of the sites are in prominent locations in the town which would result in a negative impact. Together with the consideration of a negative effect of developing Hartnoll Farm a significant negative effect overall is considered.		are prominent and therefore landscape impacts will not be completely mitigated, overall a negative effect remains.	
B) Protection and promotion of a quality built and historic environment	New development in towns and villages has the potential to have a negative impact on the historic environment located in and around these settlements. In Crediton there are a number of listed buildings that may be affected. Some sites also fall within the Conservation Area or an area of archaeological potential. There may however be some opportunities for a positive effect through enhancement of heritage assets and local distinctiveness, but this is likely to be on an individual site basis. At Hartnoll Farm, the site lies in an area of archaeological potential with the HER recording prehistoric activity here and recent archaeological work has identified prehistoric activity across the wider landscape. A small part of the border is next to residential development and there are farm buildings within the site. The level of development proposed	-3/?	The protection of the historic environment is justified in policies elsewhere in the plan. At Hartnoll Farm, the proposal requires a public Masterplanning exercise to be undertaken before any planning application is made and which will improve the quality of the final design of the development. Archaeological investigation and appropriate mitigation to	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	will be significant and therefore would likely impact the built and historic environment. However as there are no protected built or historic assets in or around the site the impact on this objective will be minor. In combination with the Tiverton Eastern Urban Extension (which is already allocated) development at Hartnoll Farm would represent a significant lengthening of Tiverton in an easterly direction along the valley floor. Two issues emerge; firstly as development extends ever easterly, the distance from town centre services increases as well as reliance on the private car and secondly the town will significantly close the gap between its urban areas with nearby villages such as Halberton, which currently has its own separate identity. The coalescence of Halberton is considered a negative effect that cannot be mitigated. Coupled with the potential impact on the historic environment including listed buildings a significant negative effect is considered although this aspect remains uncertain as the exact effect will depend on each individual proposal.		enhance sustainability. Coalescence of Tiverton with Halberton cannot be mitigated satisfactorily, a remaining negative effect after mitigation is considered. This remains uncertain given the archaeological impact is unknown before investigation.	
C) Mitigating the effects of climate change	By focusing new build development in the settlements where jobs and services are located the option will reduce the need to travel. However this option does also allocate greater development in rural areas and therefore will increased the need the travel in these locations. There is the potential for the provision of low carbon and renewable energy as part of larger development in and around the	-1/?	The protection against flood risk, surface water run-off and provision of renewable energy policy is justified in policies elsewhere in the plan. The unknown impact of the	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	main towns. However Crediton is an Air Quality Management Area (AQMA) and although the Crediton Link Road has alleviated some traffic, maximising the capacity of development at Crediton may have a negative impact on the AQMA. Where some settlements are vulnerable to flood risk, new development would be subject to safeguards in policies, with levels of development dependent on the capacity of the settlement and available suitable land. There may be some opportunities for flood mitigation and promotion of low carbon and renewable energy measures, but this is likely to be on an individual site basis, for example through design. At Hartnoll Farm the entire site is in a low risk area (flood zone 1) being the area of least flood risk. There is an unnamed watercourse which has an unknown impact on flood risk. Evidence in the SFRA suggests that the site may have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Transport provision to ensure appropriate accessibility for all modes is also supported by the policy and traffic through Halberton and Sampford Peverell is discouraged. There are no existing services, infrastructure or facilities within the site or in close proximity. Given the scale of the development at this site it is likely some negative impacts will occur with regard to carbon emissions through construction and increased traffic movement overall a slight negative effect is considered.		unnamed watercourse in the site remains. At Hartnoll Farm the policy should be read in the context of other policies in the plan which aim to mitigate the effects of climate change and reduce the risk of flooding.	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
D) Safeguarding and minimising resource use	There could be some loss of the best and most versatile agricultural land around some settlements and contribution to waste levels, a negative effect. New development will add to waste water levels however the option considers environmental capacity. At Hartnoll Farm, the majority of the site 68.7ha (71%) to the NE of the site is Grade 1 agricultural land. It is likely that this site will have a negative impact on this objective due to the scale of development of a site that is predominantly Grade 1 agricultural greenfield land which would be lost if this site is developed. The site will therefore have a significant negative impact on this objective.	-3	Policy should be read in conjunction with other policies within the plan and Devon County Council Waste Plan including those that set out the waste hierarchy.	-3
E) Promoting economic growth and employment	This option will have a positive effect on this objective as it increases jobs at existing main towns and settlements. The option also supports rural business by providing commercial floor space in villages. This option will help meet the employment needs of the district and enhance the economy in general while encouraging inward investment and future prosperity. The main towns have good connection to the strategic road network for storage and distribution uses. At Hartnoll Farm there are existing employment units on this site which could be retained. The policy option does not propose employment development on this site. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	impact.			
F) Supporting retail	Focusing development in the Tiverton, Crediton and larger villages will support the vitality and viability of existing town centres and shopping facilities in the larger villages. Although the option suggests retail provision could be provided this is not outlined as a policy requirement. At Hartnoll Farm, no retail is proposed however the high street would benefit from the custom of the residents from this development. There would be a positive effect.	+2		+2
G) Meeting housing needs	This option takes forward the Core Strategy development strategy by directing development to the existing main towns of Mid Devon until 2033. The strategic option will meet the anticipated housing needs target for the district, a significant positive effect. Housing is concentrated Tiverton and Crediton where existing services and facilities are located. The policy option allows for a scale and mix of development to help contribute to balanced communities. Overall a significant positive impact on meeting housing needs for the district.	+3		+3
H) Ensuring community health and wellbeing	Focusing development at the main towns and villages will result in the majority of new development having access to community facilities, open space and recreation available within existing settlements, a positive effect. Option focuses development towards Crediton which is a designated air quality management areas and would therefore would have a negative effect. There may be some	0	Provision of community facilities, open space and recreation and air quality mitigation is justified in policies elsewhere in the plan. At Hartnoll Farm, the option	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	opportunities for mitigation measures, on a town wide basis. For example through new road layout / relief road and /or walking and cycling. Development is primarily focused away from Exmoor National Park an international dark sky reserve, a positive effect. Walking, cycling and public transport are encouraged through proximity of development to town centres and other key services, a slight positive effect as this option would result in greater development in rural areas. The mix of development will contribute to reducing social exclusion. Policy option supports limited development which meets local needs and promotes vibrant rural communities. Option will contribute towards light and noise pollution, a slight negative effect. The policy does not mention the provision of open space, sport or recreation or the reduction of crime, a slight negative impact. Overall a neutral impact.		promotes the delivery of community facilities to meet local needs arising and transport provision to ensure appropriate accessibility for all modes. An overall slight positive effect.	
l) Delivering the necessary infrastructure	Option contributes towards the efficient use of existing infrastructure by focusing growth in the main towns, reducing the need to travel. At Hartnoll Farm, the policy requires an agreed phasing strategy to bring forward development and infrastructure in step and retain the overall viability of development. There are potential highway capacity issues around this site which would require enhancements before this site is developed. Initial work from the Tiverton Eastern Urban Extension suggest that one of the only viable solutions to transport concerns regarding further	-3	The provision of infrastructure is justified in policies elsewhere in the plan. At Hartnoll Farm, the policy for this site requires a public Masterplanning exercise to be undertaken before any planning application is made. The site is therefore likely to	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	development to the East of Tiverton is a link road through the Blundells School site. The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. Places are mostly needed at the Tiverton EUE, which is the largest area of development by far. The masterplan for the area and forthcoming developments include the provision of a school site that can accommodate up to 420 pupils, which should be sufficient to meet the demand in Tiverton. Additional secondary places will be required to accommodate the development proposed to be allocated in the emerging Local Plan Review. Developer contributions will be required in order to fund these improvements. In Crediton both local schools need to expand and need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. Given the educational pressures in both Tiverton and Crediton and need for additional infrastructure an overall significant effect is considered.		deliver the necessary infrastructure for the site with the potential to also benefit the surrounding community. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities.	

Secondary/cumulative/synergistic effects:	A number of mitigation measures are suggested which are covered by other policies in the plan.

	The Local Plan Review should be read as a whole and would mitigate the sustainability issues which cross-reference across the plan. In Crediton the maximisation of all available allocation sites could have a negative cumulative impact on the air quality of the area, given that Crediton is an air quality management area with limited additional opportunity for strategic transport infrastructure. There are also negative cumulative landscape impact given the topography of Crediton leading to sites being developed in prominent locations. In combination with the existing Tiverton Eastern Urban Extension allocation, the Hartnoll Farm site would necessitate a relief road behind Blundells School.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option meets the housing and commercial needs for the district. Development would be focussed at Tiverton and Crediton with greater distribution in rural areas. Policy option enables the distribution of development across the district to meet local needs.

Preferred Option S2: Higher Growth Scenario Commercial including J27 option

The development needs of the community will be met through the provision of approximately 215,000 square metres of commercial floorspace between 1 April 2013 and 31 March 2033.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	In taking into account the impacts noted in the appraisal of the Junction 27 proposal there are some important trees to the north of the site and in close proximity to a number of TPOs. The site falls within the 'Lowland plains' landscape character area and is typified	-3/?	The Junction 27 policy requires environmental protection and enhancement including noise mitigation. Furthermore Policy	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	as being an open, low lying flat landscape which is agriculturally prosperous. Development of this scale would have a significant impact on existing landscape character, altering the rural quality of the entrance into Mid Devon from the M5 and the rural character around Willand and Sampford Peverell. Landscape sensitivity is higher, primarily because of the lack of a relationship with an existing settlement, and the change to landscape character that would arise as a result. There are views available into the site from the west, as far as the canal in Sampford Peverell, whereas some parts feel isolated, with reduced visibility – though some parts are visible from the motorway. There are differences in character/visibility between the north and south, the north being more open and plainly visible, the south less so. The landscape appraisal for this site noted that employment development would potentially be more damaging from residential development owing to the larger scale buildings and infrastructure needed. A Phase I habitat survey for the northern commercial element of the site (Devon Biodiversity Records Centre, June 2014) was undertaken. The site includes a variety of habitat types including Biodiversity Action Plan habitats. The mature trees and hedgerows within the site were also identified as important for biodiversity. Natural England expressed the potential for the proposed leisure and retail development at J27 to impact on the Culm Grasslands		S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment. The policy requires mitigation measures for the Culm Grasslands SAC where appropriate and the allocation will be subject to comprehensive masterplanning. Given the scale of development some landscape and biodiversity impact is likely to remain however mitigation provided helps to minimise the impact. The area considered is less than that appraised in the Proposed Submission SA and the proposal now considers mitigation if there is an impact	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	SAC due to traffic impacting the air quality. Further information regarding traffic assessments and any consequential air quality assessment on the effects on this SAC will have to be undertaken to rule out any effect. Given the scale of development, impact on the landscape, biodiversity and potential impact on the Culm Grasslands SAC, overall a significant negative impact is considered although this remains uncertain.		on the Culm Grasslands, as such overall a slight negative effect is considered.	
B) Protection and promotion of a quality built and historic environment	In taking into account the impacts noted in the appraisal of the Junction 27 proposal there are listed buildings close to the site and there may be some impact the immediate settings of these buildings. To some degree there will be an impact on the registered park and garden at Bridwell which is set on rising land to the east. To a limited degree the landscape settings of Sampford Peverell conservation area and the Grand Western Canal conservation area will also be affected. There is some uncertainty in the exact impact of the allocation given this will be dependent on site layouts, density, scale and design of buildings. This site occupies a substantial area within a landscape that has evidence of prehistoric and Roman activity, overall a negative and uncertain effect.	-2/?	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality design which supports the positive contribution of new development to local character including the J27 allocation proposal. A neutral effect is considered, this remains uncertain given the masterplan for the J27 option is not yet adopted.	0/?
C) Mitigating the effects of	In taking into account the impacts noted in the appraisal of the Junction 27 proposal it is recognised that the site contains a number	-3/?	The protection against flood risk, surface water run-off and	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
climate change	of small streams but is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. The site could also contribute to surface water run off without appropriate mitigation measures. Given the scale of development carbon emissions could be high. Overall a significant negative effect and uncertain effect is considered given the potential but unknown impact of the small streams, the potential contribution to surface water run off and increased carbon emissions.		provision of renewable energy policy is justified in policies elsewhere in the plan including the J27 allocation option. Carbon emissions will be mitigated where possible, but the increase in traffic will still result in a slight negative impact. Uncertainty remains due to the unknown element of the small streams.	
D) Safeguarding and minimising resource use	In comparison to the previously assessed higher growth scenario which identified this as a significant negative effect concluding that a large number of sites would be required to meet the amount of commercial floorspace proposed, this alternative looks at one site which has the benefit of spin-off trade and linked trips. In taking into account the impacts noted in the appraisal of the Junction 27 proposal it is recognised that part of the Junction 27 site borders the Mineral Consultation Area for Hillhead Quarry. Since the Proposed Submission Sustainability Appraisal, given the smaller site area and updated Devon County Council Minerals Plan (proposed for adoption) it is considered the development of the site will not constrain future working of the remaining permitted reserves within	-2		-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Hillhead Quarry. The site is located on mainly greenfield land with a small portion on brownfield land. The majority of the site is Grade 3 good / moderate quality land with a small section of the site to the west of the M5 grade 4 poor quality land. Given the scale of the development, on Grade 3 agricultural land a negative effect is considered.			
E) Promoting economic growth and employment	This policy will have a significant positive contribution towards achieving this objective. Development in this location and at this scale has the potential to bring major inward investment and job creation for Mid Devon and the wider region.	+3		+3
F) Supporting retail	In taking into account the impacts noted in the appraisal of the Junction 27 proposal the option will deliver a 6ha designer outlet shopping centre, which will include up to 14,000 square metres of controlled comparison goods and up to 2,000 square metres of A3 uses. Since the Proposed Submission Sustainability Appraisal of the Junction 27 option a number of town centre uses have been withdrawn from the earlier promoted schemes and a retail impact assessment has been used to determine the impact. This included an assessment of 14 towns and city centres including those outside of Mid Devon District and concluded that all centres would continue to achieve higher future trading turnovers than at the assessment year. The study also sets out how designer outlet villages differ from that in town centres and how they can be controlled by planning.	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Given the changes proposed to the Junction 27 policy and the findings of the retail impact assessment, the proposal significantly enhances the retail offer of the district a significant positive impact is considered.			
G) Meeting housing needs	The Local Plan will provide for the additional housing required in response to the employment opportunity provided by this allocation. A neutral effect is considered.	0		0
H) Ensuring community health and wellbeing	In taking into account the impacts noted in the appraisal of the Junction 27 proposal the option will provide some benefit to existing and future communities in which it provides leisure and retail opportunities. In taking into account the policy as a whole the option enhances existing policy as it broadens the potential use classes which will be promoted by the policy including development for healthcare, education and public facilities, overall a positive effect.	+2		+2
I) Delivering the necessary infrastructure	In taking into account the impacts noted in the appraisal of the Junction 27 proposal, there is potential for this to have a negative effect if not planned appropriately although this remains uncertain.	-2/?	In taking into account the mitigation recommended in the Junction 27 proposal the policy seeks the provision of supporting access roads, parking, infrastructure and landscaping of 43ha. It requires transport	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			improvements to ensure appropriate accessibility for all modes, including new or improved access and egress onto the M5 motorway and pedestrian and cycling links across the motorway to Tiverton Parkway Railway Station. Furthermore comprehensive masterplanning is required by policy will provide greater detail on delivering the necessary infrastructure. The policy also requires environmental protection and enhancement with the supporting text referencing the provision of green infrastructure. Overall a positive effect is considered, the uncertainty remains as the detail of providing the	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			necessary infrastructure will be considered at the masterplanning and planning application stage.	

Secondary/cumulative/synergistic effects:	A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Additional Appraisals for S3 Meeting housing need

Preferred Option S3: Gypsy sites distribution of development – Town focussed urban extensions

This alternative distributes the gypsy pitches across the district by allocating gypsy and traveller pitches within strategic and large allocations to meet the predicted need.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural	This strategy concentrates development at the districts main towns of Tiverton, Cullompton and Crediton. Given that the allocation of	0	The protection of the natural environment is justified in	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment	gypsy pitches are proposed in areas already identified as suitable for other forms of development, the additional impact on the natural environment by allocating gypsy and traveller pitches would be a neutral impact.		policies elsewhere in the plan which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved.	
B) Protection and promotion of a quality built and historic environment	The allocation of gypsy and traveller pitches in strategic or large allocations enables the pitches to be appropriately designed and planned with a suitable relationship with other forms of development. Being in the main towns and as part of strategic or large sites enables the number of pitches or plots to be well-related to the size and location of the site and the surrounding population's size and density. Given the good relationship with the built environment a slight positive impact is considered.	+1	The protection of the historic environment is justified in policies elsewhere in the plan which aim to protect heritage assets and which promote high quality design.	+1
C) Mitigating the effects of climate change	The provision in the main towns ensures that travellers are able to access education, health, welfare and employment infrastructure minimising travel to access these services and facilities. Overall a neutral effect.	0	The protection against flood risk, surface water run-off is justified in policies elsewhere in the plan.	0
D) Safeguarding and minimising resource use	The strategic and large sites identified in the Local Plan Review have a range of agricultural land classifications with some sites on grades 1 and 2. However by allocating such sites within strategic and large sites already identified for development, it minimises the need to	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	develop on additional land therefore overall a slight negative effect is considered.			
E) Promoting economic growth and employment	No effect.	0		0
F) Supporting retail	No effect.	0		0
G) Meeting housing needs	The policy notes that a five year supply of gypsy an traveller pitches will be allocated on deliverable sites within Mid Devon to ensure that the predicted need for traveller sites will be met. This scenario identifies the sites within the main towns as part of the strategic and large allocations. Overall a significant positive effect.	+3		+3
H) Ensuring community health and wellbeing	The provision in the main towns ensures that travellers are able to access education, health, welfare and employment infrastructure. The allocation of gypsy and traveller pitches in strategic or large allocations enables the pitches to be appropriately designed and planned with a suitable relationship with other forms of development reducing tensions between the settled and traveller communities. Overall a positive impact.	+2		+2
I) Delivering the necessary infrastructure	The provision in the main towns ensures that existing infrastructure is able to provide for the travelling community including schools, health services, roads and transportation. Any additional	0	The policy should be read in the context of other policies which aim to deliver	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	infrastructure required can be planned and designed as part of the total site. Overall a neutral effect is considered.		infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan.	

Secondary/cumulative/synergistic effects:	A number of mitigation measures are suggested which are covered by other policies in the plan. The Local Plan Review should be read as a whole and would mitigate the sustainability issues which cross-reference across the plan.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option meets the gypsy and traveller needs of the district which are providing on strategic or large site at the main towns.

Alternative Option S3: Gypsy sites distribution of development – Rural focussed new sites

This strategy would focus the distribution of gypsy and traveller pitches across Mid Devon in defined villages.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The strategy concentrates gypsy and traveller pitches across rural areas in defined villages. The strategy is likely to have some landscape impact given that the sites would likely occur on the edge of villages in where there would be a slight negative effect.	-2/?	The protection of the natural environment is justified in policies elsewhere in the plan and there may be some	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	There is the risk of some gypsy and traveller sites to be disproportionate to the scale of a village in a rural setting which would lead to a further negative effect although this is uncertain as this would depend on specific site allocations. Overall a negative although uncertain effect is considered given that the exact impact will depend on specific site allocations.		opportunities for enhancement of landscape character and biodiversity on an individual site basis. Therefore overall a slight negative although uncertain effect is considered given that some impact may be mitigated but this is uncertain as it'll depend on specific site allocations.	
B) Protection and promotion of a quality built and historic environment	The allocation of gypsy and traveller pitches across rural areas means there is less scope for the site to be designed and planned as you could in a strategic or large allocation. There is also the risk that although allocated sites in rural areas should generally be smaller in scale in comparison to strategic and large sites within the district they could be of a scale large enough to be disproportionate to small settled communities. Overall a negative effect although uncertain as the exact impact will be dependent on specific site allocations.	-2/?	The protection of the historic environment is justified in policies elsewhere in the plan and some mitigation can be provided on a case-by-case basis in which heritage assets and local distinctiveness will be enhancement. Therefore overall a slight negative although uncertain effect is considered as the exact impact will dependent on specific site	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			allocations.	
C) Mitigating the effects of climate change	By focussing new build development in rural areas, this will increase the need to travel and therefore increase greenhouse gas emissions. Overall a negative effect is considered.	-2	The protection against flood risk, surface water run-off is justified in policies elsewhere in the plan.	-2
D) Safeguarding and minimising resource use	The option scores negatively towards safeguarding and minimising resource use as it focuses new development in villages in which would likely result in the loss of greenfield development and loss of some of the best and most versatile agricultural land. Overall a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No effect	0		0
F) Supporting retail	No effect	0		0
G) Meeting housing needs	The policy notes that a five year supply of gypsy and traveller pitches will be allocated on deliverable sites within Mid Devon to ensure that the predicted need for traveller sites will be met. This scenario will lead to sites being identified in rural areas to meet this need. Overall a significant positive effect.	+3		+3
H) Ensuring community	The provision in rural areas means that travellers are less able to access education, health, welfare and employment infrastructure	-2	Provision of community facilities, open space and	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	than if allocated in towns. Although there are opportunities within villages for this provision which on balance would lead to only a slight negative effect. Without being part of strategic or large allocations, there is less opportunity for pitches to be appropriately designed and planned with a suitable relationship with other forms of development. In considering these issues overall a negative effect is considered although uncertain given that this will rely on the design and site specific allocation.		recreation and air quality mitigation is justified in policies elsewhere in the plan and provide some mitigation. An overall slight negative effect remains as there is not the quantum of development in one location to provide a full range of new services and facilities.	
I) Delivering the necessary infrastructure	The provision in rural areas means that such sites may put additional pressure on existing infrastructure and may require the provision of additional infrastructure separate to other forms of development making such provision more resource intensive in comparison to the provision on strategic or large allocations. Overall a slight negative effect is considered.	-1	The provision of infrastructure is justified in policies elsewhere in the plan. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities.	0

Secondary/cumulative/synergistic effects:	A number of mitigation measures are suggested which are covered by other policies in the plan. The Local Plan Review should be read as a whole and would mitigate the sustainability issues which cross-reference across the plan.

Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option meets the gypsy and traveller needs of the district which are providing on strategic or large site at the main towns.

Additional Appraisals for S13 Villages

Alternative Option S13: Edge of Village development

Policy identifies a list of 22 rural settlements designated as villages and suitable for small scale housing, employment, tourism and leisure, services and facilities and limited development that enhances community vitality or meets local social or economic need. The policy deviates from Core Strategy through the identification of Bampton as a rural village. The definition of "rural village" within the supporting text has also been simplified to require settlements to only require three key services for inclusion; an education facility, convenience store and transport service. Based on the amended criteria, Holcombe Rogus is identified as an additional settlement. Burlescombe (including Westleigh) did not meet the essential criteria. Yeoford does not meet the essential criteria of the policy as it does not have a shop however it has been included as an exception because of its strong transport links, a bus and daily train service. This alternative proposes edge-of-village development where housing delivery across the district falls below defined 'action levels' or the Council is unable to demonstrate a five year housing supply.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Development would be limited to minor proposals within the defined settlement limits, unless housing delivery falls below defined 'action levels' or the Council is unable to demonstrate a five year housing supply in which development would be allowed on	+1	The policy should be read in the context of other policies in the plan.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	edge of village. This policy in general protects the countryside. Hemyock (an identified village) is located in the Blackdown Hills Area of Outstanding Natural Beauty (AONB). The impact does not result in a significant positive impact as in some cases edge of village development may occur which may have a greater impact than the proposed policy which ensures development is within settlement limits, overall a slight positive effect.			
B) Protection and promotion of a quality built and historic environment	The policy makes no reference to the built or historic environment. A large number of the villages have conservation areas. A slight negative effect is considered as edge of village development where housing delivery falls below defined 'action levels' or the Council is unable to demonstrate a five year housing supply could result in a cumulative negative impact on the built environment given that development would expand existing villages beyond their identified settlement limits.	-1		-1
C) Mitigating the effects of climate change	The policy makes no reference to climate change mitigation or flood risk. The option directs some limited growth to villages with the most services therefore reducing the need to travel, a minor positive effect. A slight negative effect is considered as edge of village development could lead to increase the need to travel as development could be greater than existing services can sustain. Overall a neutral effect is considered.	0		0
D)	The policy makes no reference to safeguarding or minimising	0/?		0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
Safeguarding and minimising resource use	resources. It is uncertain the level of development that could occur through edge of village development and what impact this would have on this objective. Therefore an uncertain effect is considered.			
E) Promoting economic growth and employment	Criteria within the policy allow for employment, tourism and leisure development within rural settlements and development that enhances community vitality and social and economic needs, a significant positive effect towards economic growth and employment in the district.	+3		+3
F) Supporting retail	Criteria within the policy allow for services and facilities within rural settlements and development that enhances community vitality and social and economic needs, a significant positive effect towards supporting the self-sufficiency of rural shopping.	+3		+3
G) Meeting housing needs	National planning policy advocates the provision of market housing in rural areas where it would facilitate the delivery of significant affordable housing required to meet housing need. To facilitate the provision of affordable housing in villages across Mid Devon, the supporting text of the policy clarifies that some market housing may be permitted. Rural exception sites will also be considered in line with development management policies and an existing Supplementary Planning Document on Meeting Housing Needs. In appropriate circumstances, self-build housing will be permitted through the exceptions policy. Edge of village development is also	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	promoted where housing delivery falls below defined 'action levels' or the Council is unable to demonstrate a five year housing supply. The policy is supportive of small scale housing, a significant positive effect.			
H) Ensuring community health and wellbeing	The policy criteria allow for service and facilities serving the locality and other limited development which enhances community vitality or meets a local social or economic need. The policy contributes towards maintaining and enhancing community facilities, provision of open space and the district's cultural sport and recreation opportunities. This wording directly accords with the SA objective to ensure community health and well-being, a significant positive effect. The supporting text lists transport services as one of the key criteria for defining rural settlements and therefore the list of 22 settlements will be locations most accessible by public transport. Edge of village development beyond the settlement limits of the villages defined could lead to development greater than existing services can sustain, a negative effect. On-balance the policy is considered to have a slight positive effect.	+1	The policy should also be read in the context of other policies in the plan.	+1
I) Delivering the necessary infrastructure	The supporting text clarifies that rural settlements should include an education facility, convenience store and transport service to be listed as a sustainable location for development. Burlescombe (including Westleigh) did not meet the essential criteria and are not proposed to be carried forward. Yeoford does not meet the	+1	The policy should be read in the context of other policies in the plan.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	essential criteria of the policy as it does not have a shop however it has been included for its strong transport links with provision of a bus and daily train service, a positive effect. The policy directs development to sustainable locations helping to reduce the overall need to travel, reducing traffic congestion and increasing access to key services, a significant positive effect. As the criteria do not list access to health or social care, this option could be directing development away from the most sustainable locations in respect of health, a negative effect. A slight negative effect is also felt due to the potential for edge of village development which would be beyond the settlement limits of the villages and therefore could put greater pressure on existing infrastructure. On-balance the policy option is considered to have a slight positive effect.			

Secondary/cumulative/synergistic effects:	The policy should work alongside Policy S3 Meeting Housing Need which sets out an exception test for affordable housing and self-build. The provision of edge of village development where housing delivery falls below defined 'action levels' or the Council is unable to demonstrate a five year housing supply could lead to greater cumulative impacts given that these would be beyond settlement limits and therefore would be less contained.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Development will occur throughout the lifetime of the plan up to 2033 and the effect should be considered permanent.
Spatial extent: (District wide / local)	Policy is restricted to land within defined settlement limits of villages unless housing delivery falls

	below defined ‘action levels’ or the Council is unable to demonstrate a five year housing supply in which edge of settlement development is enabled.

Site Allocations

Additional Appraisals for Tiverton allocations

Preferred Option TIV16: Blundells School: 14ha 200 dwellings

A site of 14 hectares north of Blundells School is proposed for 200 dwellings (28% affordable), 8 hectares of informal green infrastructure, land shaping to raise areas for development above flood zone 3, provision of a junction of Heathcoat Way and a safeguarded road route through the site to serve as a future second strategic road access for development at Tiverton eastern urban extension, provision and enhancement of cycle and pedestrian links in the area, site contamination assessment and remediation, provision of sustainable urban drainage and implementation of transport plans.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is located within the settlement of Tiverton. There is minimal impact on landscape character and development could improve the current site which comprises of a number of elements including a scrap yard and former poultry handling factory.	+2		+2
B) Protection and promotion of a quality built and historic environment	The site lies in an area of archaeological potential with regard to known prehistoric activity in the wider landscape. The southern boundary of the site is adjacent the Blundell's Conservation Area and development would need to have consideration of the conservation area with regard to design. In taking these elements into account the impact pre-mitigation could be negative although this is uncertain given the impact on the area of	-1/?	The policy provides for design which respects and enhances the character and appearance of the Conservation Area. It also provides for archaeological investigation and appropriate mitigation. In	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	archaeological potential is unknown. The regeneration and sustainability benefits arising from redeveloping this site overall will have a slight positive effect, on balance taking into account the potential impact on archaeology, conservation area but the benefit of regeneration overall a slight negative effect is considered. This is uncertain given the impact on archaeological potential is unknown.		taking into account these mitigation measures and the benefit of the regeneration of this site a slight positive effect is considered overall, although this remains uncertain as the results of the archaeological investigation remain unknown.	
C) Mitigating the effects of climate change	The majority of the site is in flood zone 3 (62%). With the remainder of the site in FZ1 and FZ2. Evidence in the SFRA suggests that the site may have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Development could lead to increased surface run-off a negative effect. Given the majority of the site lies within flood zone 3 and the risk of increased surface water run-off a significant negative impact is considered pre-mitigation.	-3	The policy requires land shaping to raise areas for development above flood zone 3, including an allowance for climate change, and to create additional floodplain to compensate for the loss of floodplain; mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance and implementation of transport	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			plans and other non-traditional transport measures to minimise carbon footprint and air quality impacts. Furthermore the Environment Agency is supportive of this allocation given the opportunity it provides to assist in the provision of wider flood risk mitigation proposals in the area. Given the mitigation to offset the pre-mitigation impacts and the benefit of the wider flood risk mitigation a positive impact is considered.	
D) Safeguarding and minimising resource use	0.7ha is contaminated land (food processing). This site is comprised of brownfield and grade 4 greenfield land. The development of this site would result in both a positive and negative impact but on balance an overall negative score reflecting contaminated land.	-2	The policy requires a site contamination assessment and remediation to mitigate risks associated with the former and current land uses. Taking this into account and regeneration of the site of	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			which part of the site will re-use brownfield land a positive impact is considered.	
E) Promoting economic growth and employment	The development of this site would result in the loss of vacant industrial land a negative effect. The proposed allocation does not provide for additional employment land however the large scale residential development will have some positive impact including boosting local construction firms and associated trades who would benefit from being able to undertake contract work on the site. Overall, on balance a slight negative effect is considered.	-1		-1
F) Supporting retail	This site would add to housing in a town, close to the town centre. There is potential for this site to support retail in Tiverton overall a positive effect.	+2		+2
G) Meeting housing needs	The site allocation will provide for 200 dwellings which will include 28% affordable housing. The site therefore will have a significant positive impact on meeting housing needs for the district.	+3		+3
H) Ensuring community health and wellbeing	The option may contribute towards light and noise pollution however the site is also close to the town centre of Tiverton and therefore is likely to be within walking distance to services. The development of this site is therefore likely to have a slight positive impact on this objective.	+1	The site option requires the provision and enhancement of cycle and pedestrian links in the area a positive impact. The option policy requires the	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			remediation of contaminated land which will remove pollutants. It also requires the implementation of transport plans and other transport measures to minimise carbon footprint and air quality impacts. Overall a positive impact is considered.	
l) Delivering the necessary infrastructure	The policy requires land shaping to raise areas for development above flood zone 3 and the provision of a junction on Heathcoat Way and safeguarded route through the site to serve as a future second strategic road access for development at Tiverton eastern urban extension. The option is likely to deliver the necessary infrastructure for the site. The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. It is anticipated that this development will not as an individual site put pressure on the local secondary schools however additional secondary places will be required to	-1	The site is likely to deliver the necessary infrastructure for the site and a safeguarded route to serve future communities. The policy option requires the provision and enhancement of cycle and pedestrian links in the area. It also requires implementation of transport plans and other transport measures to minimise carbon footprint and air quality impacts. Policy S8 also provides mitigation by	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	accommodate the development proposed to be allocated in the emerging local Plan Review. Developer contributions will be required in order to fund these improvements. Overall a slight negative impact is considered.		setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a slight positive effect is considered.	

Secondary/cumulative/synergistic effects:	The development overall will help meet the housing needs of Tiverton including affordable housing. It will also assist in the provision of wider flood risk mitigation proposals in the area. The policy also requires a safeguarded route through the site to serve as a future second strategic road access for development at Tiverton eastern urban extension. Furthermore there is the benefit of remediating contaminated land in this area.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The proposal will provide long term benefits for the wider area including flood risk mitigation, remediation of contaminated land and provides a safeguarded route through the site to serve as a future second strategic road access for development at Tiverton eastern urban extension. Once developed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Tiverton including for affordable housing. Development would be focussed in Tiverton, the largest town in the district.

Alternative Option TIV13 Tidcombe Hall (contingency site): 8.4ha 200 dwellings

This alternative re-considers the allocation as set out in the options consultation taking into account the information set out in the Historic Environment Appraisal (HEA), updated methodology in the SA with regard to site allocation appraisals and reasons for the reduction in total dwellings based on SHLAA panel recommendations.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site contains mature hedgerows and trees and the canal is also a defined County Wildlife Site & Local Nature Reserve. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. There is a potential, but localised impact on character as the site is reasonably well contained within the landscape. There would be some impact arising from development, though this would be against the backdrop of the existing built environment to the west, a negative effect. Given the proposed density of the site, it is considered there would be some impact on the canal in which the HEA opposes development coming further forwards towards the canal. Overall, there is potential for a significant negative effect with the density proposed.	-3	The policy option requires the protection of the setting of the Grand Western Canal, Tidcombe Hall and Conservation Areas which provides some mitigation, a negative effect overall.	-2
B) Protection and promotion of a quality built and historic	The site is located on the south eastern edge of Tiverton and is close to the Grand Western Canal Conservation Area with 1.6ha of the site is within the Grand Western Canal Conservation Area (19% northern part). This site includes the site of the medieval	-2/?	Mitigation through policy to protect the setting of the canal, Tidcombe Hall and Conservation Area may be	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment	chapel of St Lawrence and Tidcombe Hall. The site lies just to the west of Tidcombe Farmhouse which contains Tidcombe Hall, a 19th century house that was formerly a rectory. There is also a record of a domestic chapel at this site that was licensed in the early 15th century. A desk-based assessment followed by appropriate archaeological mitigation would be required.		limited given the density of development proposed. The HEA notes that design is important to mitigate the impact of development particularly to the south and east of the hall where impact could be significant but will depend on design, landscaping etc. Archaeological mitigation in the form of a programme of archaeological work undertaken through the application of a standard worded archaeological condition on any consent granted may also be required. The scale of the development proposed may limit the level of mitigation available to protect the built and historic environment, as such a	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			negative although uncertain effect remains.	
C) Mitigating the effects of climate change	The site is located in Flood zone 1 the lowest level of flood risk. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Development on the site may increase surface water run-off. A negative effect. There is also an unnamed watercourse flowing through the site for which there is no flooding data available, overall a negative and uncertain effect.	-3/?	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Policy criteria, seeks walking and cycling enhancements and connection to surrounding public rights of way and green infrastructure. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. If mitigation measures are incorporated a neutral effect is considered.	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			Uncertainty remains as the impact of the unnamed watercourse is not yet known.	
D) Safeguarding and minimising resource use	The site is made up of a variation of land which has a number of different grades, including urban land and grade 1 agricultural land. Development option is located partly on greenfield land which would be lost if this site is developed. As approximately 75% of the site is made up of Grade 1 and Grade 2 agricultural land, development of this site will have a negative impact on this objective.	-3		-3
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact.	+1		+1
F) Supporting retail	The policy contains no retail proposals, however the high street would benefit from the custom of the residents from this development. There would be a positive effect.	+2		+2
G) Meeting housing needs	Option provides for 200 new dwellings a contribution towards future housing need and includes provision for affordable housing, a significant positive effect.	+3		+3
H) Ensuring community	There are shops along Canal Hill which are easily accessible, but the site is not within walking distance of Tiverton town centre, a	-1	Policy criteria, seeks walking and cycling enhancements and	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	slight negative effect. There are bus stops located on Tidcombe Lane and a footpath on the opposite site of Tidcombe Lane leading to Canal Hill.		connection to surrounding public rights of way and green infrastructure.	
I) Delivering the necessary infrastructure	A key factor is access. Tidcombe Lane has limited width without footways and Tidcombe Bridge is similar. Improvements to Tidcombe Lane will be necessary northwards from the site to ensure the safety of pedestrians, although will not necessarily increase its traffic capacity. A single vehicular access point on to Canal Hill will need to be supplemented with a secondary emergency access designed to be located at the end of the main cul-de-sac within the site. The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. Additional secondary places will be required to accommodate the development proposed to be allocated in the emerging Local Plan Review. Developer contributions will be required in order to fund these improvements. Given school capacity and site access issues given the scale of development proposed a significant negative effect is considered.	-3	Criteria within the policy seek a vehicular access points from Canal Hill and improvements to Tidcombe Lane northwards from the site. However given the scale of development proposed and access limitations, it is considered a negative effect remains.	-2

Secondary/cumulative/synergistic effects:	The development overall will help meet the housing needs of Tiverton including affordable housing. Given the level of development proposed it is anticipated there will be a likely negative cumulative impact on the road network.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. There it potential for long term issues with access to the site due to the level of development proposed.
Spatial extent: (District wide / local)	This site option will help provide housing within Tiverton including for affordable housing. Development would be focussed in Tiverton, the largest town in the district.

Alternative Option TIV14 Wynnards Mead: New information, impact with existing mitigation

A site of 6.3 hectares at Wynnards Mead, Bakers Hill is allocated for residential development, subject to; 70 dwellings (28% affordable), design that minimises impact to landscape character and setting of the adjoining listed building and unlisted building (Wynnards Mead), upgrading the lane to provide vehicular access point with the existing access to Wynnards Mead to form a secondary access for pedestrian and cyclists and site contamination assessment with mitigation for the historic quarry. New information has been provided by the Historic Environment Assessment (HEA) and a representation by the Environment Agency (EA) which assesses the harm to the historic environment and flood risk.

Sustainability objective	**Commentary**	**Impact**	**Mitigation**	**Post Mitigation**
A) Protection of the natural environment	This site falls within the 'River valley slopes and combes' landscape character area. This area typically falls within the River Exe valley and often has steep, wooded sides and a strong sense of enclosure within a lush valley landscape. The site is elevated, and therefore is visible from a number of viewpoints, including Seven Crosses Road to the south. Accordingly, there would be	-2	The site capacity was reduced to 70 dwellings down from 100 dwellings to reflect site constraints originally identified. The policy requires design which minimises impact	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	some impact from development in this location, a negative effect.		to the landscape character, overall a minor negative impact with this mitigation measure.	
B) Protection and promotion of a quality built and historic environment	The site, which lies to the west of Tiverton, consists of the grounds of a large house called 'Wynnards Mead', including some associated agricultural land and two cottages. Gotham adjoins the site to the west. The site is in close proximity to a listed building to the immediate west of the site. In response to a request made by Historic England a Historic Environment Assessment (HEA) was undertaken which has indicated that the policy as proposed would have a very damaging impact on the settings of Gotham (recently upgraded listed building to II*) and Wynnards Mead (heritage asset). Given the concerns and clarity provided in the HEA a significant negative impact is considered.	-3	Criteria within the policy requires design which protects the character and setting of the adjoining listed buildings and the unlisted house within the site 'Wynnards Mead'. However the HEA suggests significant buffers are required to reduce the impact on the relevant buildings. The mitigation suggested in the policy with the quantum of development proposed would not be capable of providing the mitigation suggested in the HEA, therefore a significant negative effect remains.	-3
C) Mitigating the effects of climate	The site is set on the north side of the Cottey Brook, sloping down north to south. The largest portion of the site in the north is	-2	A policy requirement in the Local Plan Review seeks	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
change	located in flood zone 1, the lowest risk of flooding. The southern edge of the site is within flood zone 3 where the Cottey Brook runs along the southern boundary. Development could lead to increased surface water run-off, a negative effect.		mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance which provides some mitigation. However a negative effect remains given that new information from the EA suggests a 7m wide buffer around Cottey Brook is required to allow for future maintenance of the watercourse which isn't currently mitigated in the policy.	
D) Safeguarding and minimising resource use	2.1ha (33% S and W) of the site is located on Grade 3 very good quality agricultural land, 4.2ha (67% NE) of the site is located on unclassified agricultural grade and a small area of contaminated land (historic quarry, 0.06ha in north). On balance development of this site would result a minor negative impact on this objective.	-1/?	Criteria in policy require site contamination assessment and remediation to mitigate risks associated with the historic quarry to the north of the site. A negative effect remains due to the partially known	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			agricultural grade of land.	
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land. A neutral effect.	0		0
F) Supporting retail	The policy contains no retail proposals, however the high street would benefit from the custom of the residents from this development. There would be a minor positive effect.	+1		+1
G) Meeting housing needs	Option provides for 70 new dwellings a contribution towards future housing need including affordable housing, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	The services and facilities of Tiverton lie some 1.2 km distant. The site is located within walking distance to Tiverton town centre and is close to a bus service into Tiverton.	+1		+1
I) Delivering the necessary infrastructure	An adequate site access is achievable however the existing carriageway and footway links to Tiverton are very steep. The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. Additional secondary places will be required to accommodate the development proposed to be allocated in the emerging Local Plan	-2	Policy proposes the upgrading of the lane to 'Wynnard's Cottages' to provide the vehicular access point with widening of the frontage. The existing access to the house Wynnard's Mead to form a secondary access for pedestrians and cyclists. Policy	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Review. Developer contributions will be required in order to fund these improvements. Given school capacity and site access issues a negative effect is considered.		S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	The development overall will meet the housing needs of Tiverton including affordable housing.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. Once developed, development will be permanent. The development without appropriate mitigation will lead to a permanent damaging impact on the settings of Gotham (recently upgraded listed building to II*) and Wynnards Mead (heritage asset).
Spatial extent: (District wide / local)	This site option will help provide housing within Tiverton including for affordable housing. Development would be focussed in Tiverton, the largest town in the district. The provision of 70 dwellings will help meet the housing needs of the district as a whole.

Alternative Option TIV14 Wynnards Mead: New information, reduced area

In response to a request made by Historic England a Historic Environment Assessment (HEA) was undertaken which suggested an alternative option of not allocating the south west and south of the site to protect the setting of the grade II* listed building (Gotham) and heritage asset

(Wynnards Mead). Taking this into account along with a representation from the Environment Agency a site of 1.2 hectares at Wynnards Mead, Bakers Hill could be allocated for residential development, subject to; 29 dwellings (28% affordable), design that minimises impact to landscape character and setting of the adjoining listed building and unlisted building (Wynnards Mead), upgrading the lane to provide vehicular access point and site contamination assessment with mitigation for the historic quarry.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'River valley slopes and combes' landscape character area. This area typically falls within the River Exe valley and often has steep, wooded sides and a strong sense of enclosure within a lush valley landscape. The site is elevated, and therefore is visible from a number of viewpoints, including Seven Crosses Road to the south. Accordingly, there would be some impact from development in this location, a negative effect.	-2	The site capacity has been reduced to 29 dwellings down from 70 dwellings to reflect site constraints. The policy requires design which minimises impact to the landscape character, overall a minor negative impact with this mitigation measure.	-1
B) Protection and promotion of a quality built and historic environment	The site, which lies to the west of Tiverton, consists of the grounds of a large house called 'Wynnards Mead', including some associated agricultural land and two cottages. Gotham adjoins the site to the west. The site is in close proximity to a listed building to the immediate west of the site. In response to a request made by Historic England a Historic Environment Assessment (HEA) was undertaken which suggested an alternative option of not allocating the south west and south of the site to protect the setting of the grade II* listed building	-1	Criteria within the policy requires design which protects the character and setting of the adjoining listed buildings and the unlisted house within the site 'Wynnards Mead'.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	(Gotham) and heritage asset (Wynnards Mead). In considering the proposed alternative for the site it is considered that a slight negative impact would remain.			
C) Mitigating the effects of climate change	With the new information provided by the EA that a buffer of at least 7m around Cottey Brook is required to allow for future maintenance of the watercourse, the proposed alternative for the site no longer abuts the north side of Cottey Brook and therefore no longer falls within flood zone 3. However development could lead to increased surface water run-off, a slight negative effect remains.	-1	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. On balance it is felt that development of this site would have a neutral effect.	0
D) Safeguarding and minimising resource use	The proposed alternative site is located on unclassified agricultural grade and a small area of contaminated land (historic quarry, 0.06ha in north). On balance development of this site would result a minor negative impact on this objective.	-1/?	Criteria in policy require site contamination assessment and remediation to mitigate risks associated with the historic quarry to the north of the site. Due to the partially known agricultural grade of land an unknown and slight negative impact would be considered.	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land, a neutral effect.	0		0
F) Supporting retail	The policy contains no retail proposals, however the high street would benefit from the custom of the residents from this development. There would be a minor positive effect.	+1		+1
G) Meeting housing needs	Option provides for 29 new dwellings a contribution towards future housing need including affordable housing, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	The services and facilities of Tiverton lie some 1.2 km distant. The site is located within walking distance to Tiverton town centre and is close to a bus service into Tiverton.	+1		+1
I) Delivering the necessary infrastructure	An adequate site access is achievable however the existing carriageway and footway links to Tiverton are very steep. The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	these improvements. Given school capacity and site access issues a negative effect is considered.			

Secondary/cumulative/synergistic effects:	The development overall will meet the housing needs of Tiverton including affordable housing.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Tiverton including for affordable housing. Development would be focussed in Tiverton, the largest town in the district. The provision of 29 dwellings will help meet the housing needs of the district as a whole.

Alternative Option New Site Tiverton- Seven Crosses Hill

Land with a gross site area of 7.69ha at Seven Crosses hill, Tiverton for 184 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies adjacent to the designated town of Tiverton (under existing planning policy), outside but adjoining the settlement limit. The majority of this site falls within the 'River valley slopes and combes' landscape character area which typically falls within the River Exe Valley and often has steep, wooded sides and a	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation and therefore a slight negative	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	strong sense of enclosure within a lush valley landscape. The southern part of the site falls within the 'Upper farmed and wooded valley slopes' landscape character area which is typified as having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium scale fields of permanent pasture. The site is very open from the northern direction whereby the surrounding skylines consist of expansive views of Tiverton and the surrounding countryside. There are no European wildlife sites or SSSIs in close proximity but the site does contain an area of woodland approximately 0.56ha in size which is a priority habitat. As development would be very prominent within the landscape, a negative effect is considered.		effect is considered. Further mitigation would be provided if development was focused on the northern part of the site only. This section would not have such a significant impact on landscape character and would have a better relationship to the existing settlement limit.	
B) Protection and promotion of a quality built and historic environment	There are no listed buildings located in close proximity. This proposed development site occupies a prominent position in the landscape where prehistoric activity is recorded in the County Historic Environment Record on similar topographic sites. An overall slight negative and uncertain effect is considered.	-1/?	Local Plan Review policy DM25 would provide some mitigation by requiring that any planning application include sufficient information to enable a description of a heritage asset affected and a consideration of the impact of development upon it. Based on information from Devon County Council this may take the form of 1) an	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			archaeological geophysical survey and 2) a programme of intrusive archaeological investigation of areas that would be affected by development here. Overall a neutral effect although this remains uncertain as the impact depends on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk however there is an ordinary watercourse on the eastern site boundary. Surface water run-off would increase without appropriate mitigation measures. Overall a slight negative and uncertain effect.	-1/?	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A Flood Risk Assessment would be required to determine the impact of the ordinary watercourse. If development avoided areas of flood risk this would mitigate	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			any impact. Overall a neutral and uncertain effect given as the effect of the ordinary watercourse is not yet known.	
D) Safeguarding and minimising resource use	Development is located on a greenfield site which is grade 3 good / moderate agricultural land, a slight negative effect.	-1		-1
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be a slight positive impact.	+1		+1
F) Supporting retail	This option proposes a large scale residential development within a town. The policy contains no retail proposals, however the high street would benefit from the custom of residents from this development. There would be a positive effect.	+2		+2
G) Meeting housing needs	Option provides for 184 new dwellings contributing towards future housing needs, a significant positive effect.	+3		+3
H) Ensuring community health and	Tiverton is a designated town under policy S10; it has numerous services as outlined in S10 and is considered appropriate for development. Services/facilities in the town centre are within	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
wellbeing	walking distance. Overall a slight positive effect.			
I) Delivering the necessary infrastructure	The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. Additional secondary places will be required to accommodate the development proposed to be allocated in the emerging Local Plan Review. Developer contributions will be required to fund these improvements. Access is a concern as the delivery of an appropriate estate road would be difficult given the challenging topography of the site. The site would require a number of accesses from Seven Crosses Road all of which would necessitate significant excavation. Given the constraints to site access and educational capacity an overall negative effect is considered.	-2	Policy S8 would provide some mitigation by setting out that developers would be expected to contribute to, or bear the full cost of new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the primary schools to expand within their current sites. Although access is achievable, work would require significant excavation and would constrain the delivery of the expected yield. Overall a slight negative and uncertain effect is considered given the access constraints and the uncertainty around the limited capacity of the school to expand.	-1/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site have the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site could lead to overcapacity issues in local schools.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic along Seven Crosses Road, Tiverton. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Additional Appraisals for Cullompton allocations

Alternative Option CU1-6: North West Cullompton including Growen Farm full allocation

A site of 106 hectares to the North West of Cullompton is allocated for mixed use development subject to; 1520 dwellings (28% affordable), 5 pitches for gypsies and travellers, extra care housing, 5% of housing to be serviced plots for self-build, 21,000 sqm of commercial floor space including retirement complex, hotel and leisure, 28 hectares of green infrastructure, road linking Tiverton Road to Willand Road, environmental protection, community facilities including primary school, Carbon reduction and air quality improvements, phasing strategy and master planning exercise. Policies CU2-6 provide further detail.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are a number of protected trees and hedgerows within the site, along field boundaries. This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The landscape is undulating, with the higher parts more sensitive to change and development. Developing this area will extend the built up area of the town, from an agricultural landscape, which will be a significant change. However, the visibility from elsewhere varies across the site. The more elevated parts of the site (such as St Andrews Hill and Rull Hill) are more sensitive to development because of their visibility in the landscape (particularly on north and west facing slopes). The Landscape and Visual Appraisal concludes that development	-3	The policy requires 'environmental protection and enhancement' which will help mitigate the impact on this objective however the level of development on the site will still have an impact on the character of the area. CU3 sets out these measures in detail including; the protection and strengthening of trees and other features, maintaining wildlife networks, 28 ha of green infrastructure, providing	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	of the land will extend Cullompton into the open countryside beyond Rull Hill which currently acts as a strong threshold in the landscape which will largely separate the site from adjacent proposed development. Opportunities for development are limited on the site, and should development proceed, it should be limited to the eastern part of the southern field, adjacent to the proposed development to the east. The northern four fields are not suitable for development. Given some parts of the Growen Farm site are sensitive to change and development, overall a significant negative effect is anticipated.		public open space and allotments, strategic landscaping and measures to protect the biodiversity. However given the findings of the 2014 Landscape and Visual Appraisal on Strategic Site Options report identified the northern four fields are not suitable for development a negative effect remains.	
B) Protection and promotion of a quality built and historic environment	The site adjoins a roman fort on St Andrew's Hill (a scheduled ancient monument). There are a number of listed buildings within the cemetery and farmyards adjoining the site which would need to be considered when designing the development. The site lies in an area of high archaeological potential to the north of the Roman fort at St Andrew's Hill and contains evidence of prehistoric activity identified through aerial photography and findspots of flint tools. Recent archaeological investigations in this area have demonstrated the presence of extensive and significant prehistoric and Romano-British sites.	-2/?	Criteria within the supporting policy CU3 seek mitigation measures through archaeological investigation, a slight negative effect. The policy requires a public Masterplanning exercise to be undertaken before any planning application is made and which will improve the quality of the final design of the development. Overall a	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			slight negative effect.	
C) Mitigating the effects of climate change	The site is largely located in Flood zone 1 the lowest risk to flooding. However there are unnamed watercourses flowing through parts of the site for which flood zone information is not yet known. The northern edge is adjacent to flood zone 3a, which is associated with a watercourse which runs west-east, a potentially slight negative impact. The layout of the development will need to take this into account with a potential buffer zone. Areas of floodplain should be retained as part of the strategic green infrastructure. The Flood Map for Surface Water shows a low risk of flooding from surface water in most areas. Any development must be accompanied by a suitable drainage strategy to deal with existing surface water flows and any potential increase in surface runoff a slight negative impact. The site has increased in size, which has led to more of the northern boundary being adjacent to flood zones 2 and 3. Criteria within the policy seek carbon reduction and air quality improvements, this is required to minimise the overall carbon footprint of the development and ensure the impact of the site on air quality is acceptable, a slight positive effect. One Critical Drainage Area is identified at Cullompton. A Flood Risk Assessment will be required at the planning application stage to determine specific recommendations for mitigation. Taking into account flood risk	-1/?	Criteria within the policy seek mitigation measures through environmental protection and enhancement. Built development is entirely in flood zone 1 and CU3 seeks SUDs to deal with surface water run-off. The policy requires carbon reduction and air quality improvements and will help mitigate the effects of climate change. This will help minimise the overall carbon footprint of the development. A Flood Risk Assessment would be required to determine the impact of the unnamed watercourses. If development avoided areas of flood risk this would mitigate any impact. Policy S11 Cullompton supporting text	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	and climate change an overall minor negative and uncertain effect is considered.		acknowledges the Critical Drainage Area at Cullompton which provides mitigation. Taking into account flood risk and mitigation measures for climate change an overall slight positive effect is considered. Uncertainty remains as the impact of the unnamed watercourse is not yet known.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Approximately 70% of the site is located on Grade 1 agricultural land of the highest quality, with the remainder located on Grade 4, poor quality agricultural land. Grade 1 agricultural land in Mid Devon amounts to 32.4 square kilometres, only 3.5% of the district. Given the loss of the highest grade agricultural land, a significant negative effect is considered.	-3		-3
E) Promoting economic growth and employment	Policy provides 21,000 sqm of commercial floorspace reflecting helping to diversify the economy and encourage inward investment. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. Providing	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	employment sites near where to people live would provide the opportunity to reduce out-commuting, levels of which are high within the district. There would therefore be a significant positive impact.			
F) Supporting retail	The policy contains no specific retail proposals although these proposals could form part of the Commercial allocation. Though the high street and supermarket are not within easy walking distance of all parts of the site, it is still anticipated that they would benefit from the custom of the residents from this development. Therefore a positive impact has been assumed.	+2		+2
G) Meeting housing needs	The option would provide for a significant proportion of the housing needs within the district, overall a significant positive impact.	+3		+3
H) Ensuring community health and wellbeing	The option will have an impact on Cullompton Air Quality Management area which will require some mitigation. The existing site allocation for North West Cullompton includes the provision of a road linking Tiverton Road to Willand Road. This, along with delivery of the Town Centre Relief Road, is intended to significantly reduce the amount of traffic in the town centre. This should in turn improve the air quality and town centre vitality (as it would direct traffic away from the high street) and is at the heart of the long term development strategy for Cullompton. The Renewable Energy, Carbon Reduction and Air Quality study	+2	CU5 makes note of carbon reduction and air quality improvements which will help minimise pollution and benefit community health and wellbeing including use of low emission strategies. CU3 makes provision for areas of equipped and laid out public open space including	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	(2014) reiterates that North West Cullompton alongside East Cullompton are likely to result in the largest change in local air quality as both developments are large in size. Development in Cullompton will increase pollution concentrations as a result of additional traffic using the local road network; however the existing allocation for a Town Centre relief road linking Station Road and Meadow Lane in particularly important for air quality. There is a medical centre located adjacent to the east side of the northern element of the site and a number of rights of way/bridleways run through the site.		children's play, sports pitches and allotments as well as strategic green infrastructure including park land, open space and local nature reserve. The policy also promotes the delivery of community facilities to meet local needs arising and transport provision to ensure appropriate accessibility for all modes. This suggests that opportunities for sustainable forms of travel may arise.	
l) Delivering the necessary infrastructure	The policy requires an agreed phasing strategy to bring forward development and infrastructure in step and retain the overall viability of development. There are potential highway capacity issues around this site which would require enhancements, for example, to M5 J28 before this site is developed. The policy requires masterplanning to take place to ensure that the necessary infrastructure is delivered at a rate to support the additional development without placing unacceptable demands on existing capacity. A road link between Tiverton Road and	+2	CU6 includes an agreed phasing strategy to bring forward development and infrastructure in step and retain the overall viability of development. CU3 includes the provision of Green Infrastructure. CU2 sets out agreed transport provision	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Willand Road will be delivered as part of bringing the site forward, whilst the site will contribute towards the cost of the Town Centre Relief Road, a key element of local infrastructure. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for new primary places in Cullompton. The two schools in the town, St Andrews and Willowbank currently accept more pupils than their planned admission number for the size of school and facilities available there. There are two secondary schools located within this Local Learning Community, including Cullompton Community College which currently has 283 places spare capacity and Uffculme School, which currently admits 113 pupils more than its planned admission number. It will therefore be necessary to expand the secondary schools in the Local Learning community to provide roughly 334 places. Part of the site is close to St. Andrew's Primary School; however the quantum of development will require an additional school to be built to meet identified need. Overall, provision of the necessary infrastructure, is considered a positive impact arising from the policy.		including provision of a network of streets linking to the existing highway network, including a through route suitable for buses linking Tiverton Road to Willand Road; bus enhancements and pedestrian routes. CU4 makes provision for a primary school and contributions towards early years and youth support services. The site is therefore likely to deliver the necessary infrastructure for the site which may also benefit the surrounding community.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site and the other possible options in the plan within Cullompton have the potential to impact upon traffic, put pressure on services and facilities. Development could contribute towards

	traffic in the town with consequential impact on air quality within the town centre. Additional primary school capacity will be needed to accommodate the developments. This would be most suitably provided through a new school at the North-West Cullompton site and a new primary school or schools within the East of Cullompton allocation. Additional secondary school capacity will need to be undertaken in consideration of the aspirations of the local schools and communities.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time of the site is approximately 15 years. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will significantly help provide housing for the district. Development would be focussed as an extension to the second town in the district.

Alternative Option CU7-12: East Cullompton Aller Barton Farm and land south of Honiton Road

A site of 181 hectares to the east of Cullompton is proposed for mixed use development, subject to; 2,100 dwellings during the plan period and 500 dwellings post 2033 including, 28% affordable, extra care housing, 5% to be serviced plots for self-build, at least 10 gypsy and traveller pitches, 20,000 square metres mixed commercial floor space during the plan period and 12,000sqm post 2033, 40ha of green infrastructure comprising mixed open space, sports pitches, allotments and natural habitats, new or improved access and egress onto the M5 motorway and pedestrian and cycle links to the town centre, environmental protection, assessment of land contamination, community facilities, carbon reduction and air quality improvements, phasing strategy and masterplanning.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland Plains' landscape character area which is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is large and predominately flat towards the south west but undulating at the north eastern extent of the site. The landscape of the surrounding area is also largely flat, offering limited views into the site other than towards the south west where there are views out towards the surrounding countryside and agricultural lands. However, given the scale of the site, there may well be variations in topography. The site encompasses part of Allerwood which is lowland mixed deciduous woodland. Much of this wood has been replanted with larch and the ground flora is of particular interest. There is also a rare species designation: Primrose '*Primula vulgaris'* located within the site. Although the site is largely flat offering limited views and fields are of a low wildlife value, the scale of the site is still considered to have a negative effect to wildlife and biodiversity and therefore, a negative effect is considered. This site has not had the benefit of a landscape and visual appraisal as the other strategic site options have, as such an uncertain effect is also considered.	-2/?	The policy requires 'environmental protection and enhancement' which will help mitigate the impact on this objective however the level of development on the site will have an impact on the character of the area. Policy should set out these measures in detail including the protection and strengthening of trees and other features, maintaining wildlife networks, providing public open space and allotments, strategic landscaping and green infrastructure including park land and open space. Overall a slight negative and uncertain effect given that the site has not had the benefit of a landscape and visual appraisal as other strategic site options	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			have.	
B) Protection and promotion of a quality built and historic environment	There are a number of listed buildings located close by but not within the proposed site boundary. These include the Grade II listed Maddock's Farmhouse, the Grade II listed Aller restaurant and the farm buildings arranged around a farmyard 20m south east of Aller restaurant. The site occupies a significant area within a landscape that has evidence of prehistoric and Roman activity recorded in the County Historic Environmental Record. To the west, recent archaeological work has demonstrated the presence of prehistoric and Roman settlement in and around Cullompton. While no such sites are recorded within the area under consideration (though this may just reflect the absence of any formal archaeological work in this area) the Historic Environment Team would regard, due to the area of the proposed allocation and the known prehistoric and Roman activity in the wider landscape, that there is potential for the site to contain archaeological deposits associated with the known prehistoric and Roman activity in the vicinity. The Historic Environment Team would therefore advise the results of an appropriate programme of archaeological work to allow the archaeological potential of the site to be understood along with the impact of any development upon the heritage assets in the site. This would be in accordance with Local and National policy on planning and the	-3/?	Policy should seek detailed archaeological investigation and measures to record and protect archaeological interest. Overall a neutral effect, although this remains uncertain as the effects will depend on the results of the investigation. The policy requires a public masterplanning exercise to be undertaken before any planning application is made to ensure the quality of the final design of the development. The adopted masterplan will help to minimise the impact on the built and historic environment through good design. However given the separation of the site from existing development to	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	historic environment. There is potential for minor negative impacts on heritage until more information is known. Given the potential impact on archaeological potential, a slight negative and uncertain effect is considered. The site option itself is divorced from existing development. The separation of the site from the existing development to the west raises concerns about how well the final design could integrate the existing and proposed development. Furthermore the shape of the proposed site would be an illogical and unusual extension to the built environment. Overall a significant negative effect when combined with the possible impact on archaeological potential, although the archaeological element is uncertain.		the west, and the unusual shape of the development forming an illogical extension to the built environment it is considered that limited mitigation can be provided to ensure the final design is integrated with existing development, therefore overall an overall negative although uncertain effect remains.	
C) Mitigating the effects of climate change	Significant areas to the west of the site are within Flood zones 2 and 3. An array of ordinary watercourses passes through the site, some of which have been culverted. There are significant areas of surface water flooding risk across the site, particularly concentrated around all watercourses. These include concentrated areas of surface water flood risk to the north of Allerwood, extending to the west and along the north-west boundary of the site and high risk regions particularly prevalent to the north-west. There have been two historical fluvial flooding incidents close to the site, just outside of the northerly and southerly boundaries. Reference should be made to Devon	-3/?	Criteria within the policy seek mitigation measures through retention of land in the floodplain as informal amenity open space. The policy requires carbon reduction and air quality improvements and will help mitigate the effects of climate change. Policy S11 Cullompton supporting text acknowledges the Critical	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	County Council's draft SuDS Design Guidance. Surface water from this development will be managed in a way which provides benefits to water quantity, water quality, public amenity and biodiversity. This site will also have an impact on the Cullompton Air Quality Management Area. Given the historical fluvial flooding incidents close to the site and the potential impacts on the Cullompton Air Quality Management Area and the uncertainty associated with the effects of the ordinary watercourses present within the site, a significant negative and uncertain effect is considered.		Drainage Area at Cullompton which provides mitigation. Taking into account flood risk and mitigation measure for climate change an overall neutral effect is considered but this remains uncertain given that the potential effects of the ordinary watercourses remain unknown.	
D) Safeguarding and minimising resource use	Development option is located on grade 3 greenfield land. Given the significant loss of grade 3 agricultural land, a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	There are a number of farms which could be incorporated into the site, or replaced with other employment units as part of a mixed use approach for the whole site. The policy seeks the provision of 20,000 square metres of mixed commercial floor space during the plan period and 12,000 sqm post 2033, bringing with it a large number of jobs into the town. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would be a significant positive impact.	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
F) Supporting retail	The scale of residential development in this location near to the town centre is considered a slight positive effect for town centre viability. As the percentage of retail within the sites commercial element is uncertain, an unknown is also considered.	+1/?	Criteria in the policy state that this is subject to impact assessment which demonstrates no adverse impacts on existing retail uses within Cullompton Town Centre, an overall slight positive effect. An unknown is recorded until the retail impact has been assessed.	+1/?
G) Meeting housing needs	Option will provide for a significant proportion of new dwellings during the plan period including an affordable housing contribution towards future housing need, a significant positive effect. The mix of dwellings to be achieved on the site will be tailored to achieve the appropriate balance and will provide gypsy and traveller sites, extra care housing and service plots for self-build. Given the site is of such a scale to generate a critical mass of self-sustaining development and the option significantly contributes towards housing development an overall significant positive effect is considered.	+3		+3
H) Ensuring community health and	The site is located some distance from the town centre and remote from Cullompton town services/facilities. Option will contribute towards light and noise pollution, a slight negative	-3	Policy should make note of carbon reduction and air quality improvements which	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
wellbeing	effect. The Renewable Energy, Carbon Reduction and Air Quality Study (2014) reiterates that North West Cullompton alongside East Cullompton are likely to result in the largest change in local air quality as both developments are large in size. Development in Cullompton will increase pollution concentrations as a result of additional traffic using the local road network; however the existing allocation for a Town Centre relief road linking Station Road and Meadow Land is particularly important for air quality. In balancing the distance of the development from the town centre, the lack of services and the corresponding light, noise and air pollution, an overall significant negative effect is considered.		will help minimise pollution and benefit community health and wellbeing. CU9 makes provision for areas of equipped and laid out public open space including children's play, sports pitches and allotments as well as strategic green infrastructure including park land, open space and local nature reserve. Criteria within the policy seek provision of a dedicated pedestrian and cycle route to the town centre. The policy also promotes the delivery of community facilities to meet local needs arising and transport provision to ensure appropriate accessibility for all modes. This suggests that opportunities for sustainable forms of travel may arise.	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			However given the unusual shape of the site and separation from existing development with access to Honiton Road only to the east of the site, the provision of accessible forms to travel may not easily be provided. An overall slight negative and uncertain effect.	
I) Delivering the necessary infrastructure	The policy will require an agreed phasing strategy to bring forward development and infrastructure in step and retain the overall viability of development. There are potential highway capacity issues around this site which would require enhancements, for example, to M5 J28 before this site is developed. A development in this location and of the size proposed would have significant implications for the operation of J28 and the M5 mainline. The junction already operates at capacity at times with queues on the off-slips extending back onto the M5 mainline. Consideration would also have to be given to the ability of the M5 mainline to accommodate the forecast traffic flows and measures identified, if necessary, to ensure that demand for traffic movements along the M5 remains within the	-3	The policy will include a phasing strategy to bring forward development and infrastructure in step and retain the overall viability of development. The policy will include the provision of Green Infrastructure. CU8 sets out agreed transport provision including; Provision of mitigation measures to ensure only acceptable impacts occur to J28 of the M5 as a result of	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	capacity of the mainline to accommodate it. The site is of a sufficient scale for infrastructure improvements to be necessary within and outside of the site. Criteria within the policy will seek transport provision to ensure appropriate accessibility for all modes, improvements to Junction 28 of the M5 motorway and provision of a dedicated pedestrian and cycle route to the town centre. Given the capacity limitations for junction 28 of the M5; traffic implications for the Honiton Road and lead in time for delivery of a large urban extension against proposed mitigation measures a significant negative effect is considered until appropriate studies / modelling work can confirm that access can be achieved and suitable junctions designed. The size of the development would also need considerable planning and design works and criteria within the policy should seek a phasing strategy and public masterplanning exercise. The unusual shape of the proposed site would result in access from the main Honiton Road only available to the East of the site, the furthest area of the site to existing development to the West. The primary schools will have limited spare capacity to support future development and are on constrained sites and not easily expanded. A development of this scale is likely to generate approximately 1200 primary age pupils, requiring the provision of new primary provision within the development site. Potentially,		traffic generated from the site; Provision of appropriate highway improvements on roads around the development to ensure an unacceptable traffic impacts are mitigated; Provision of a network of streets linking to the existing highway network, and appropriate mitigation to reduce impacts on the existing road network such as Honiton Road; Sustainable modes of transport are also supported. The policy should make provision for a primary school and contributions towards secondary school places. The site is therefore likely to deliver the necessary infrastructure for the site which may also benefit the surrounding community.	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	this would require two sites of between 2.ha and 2.9ha each (including nursery provision). The secondary school is at capacity and will need to be expanded to support increased children in an around the area. Overall a significant negative effect.		However this is uncertain given the unusual shape of the site only allowing access from the east of the site which calls into question how well the site will be integrated with existing infrastructure.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon the traffic, put pressure on services and facilities and the current provision of infrastructure should be mitigated by the policy and supplementary policies which are promoted in the supporting text. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre and capacity issues at Junction 28 of the M5 however the policy will require mitigation for these impacts. Overall the development of this site will help meet the housing needs of Cullompton and the district as a whole. Additional primary school capacity will be needed to accommodate the developments. This would be most suitably provided through a new primary school at the North-West Cullompton site and a new primary school or schools providing within the East of Cullompton allocation. Additional secondary school capacity will need to be undertaken in consideration of the aspirations of the local schools and communities. The Renewable Energy, Carbon Reduction and Air Quality study (2014) recognises benefits with locating strategic development within a single location in carbon reduction terms.
Temporary/permanent effects: Timescale: Short	Development will occur during the later period of the plan, and then will continue

(1-5 years), Medium (6-15 years), Long (15+ years)	throughout the remaining lifetime, (therefore likely to only be taking place in the long-term). Once developed, the effects will be permanent.
Spatial extent: (District wide/local)	The policy set seeks to meet the development needs of the whole district.

Alternative Option CU21: Land at Colebrook, larger site 19.3ha 400 dwellings

A site of 19.3 ha is proposed for residential development, subject to; 400 dwellings. The development shall not commence until the Town Centre relief road has been provided, upgrading of Colebrook Lane to accommodate additional traffic and two points of access from Siskins Chase, green infrastructure and retention of the land in the flood plain for open space, environmental measures, archaeological investigation, transport assessment and air quality improvements.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The central band of the site falls within the 'Sparsely settled farmed valley floors' landscape character area. This area is typified by the presence of rivers or streams and related flat or gently sloping valley bottoms within the low lying areas of the district. The north and south portions of the site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The site is reasonably enclosed to Colebrook Lane and is part of a rolling landscape. There is limited wider landscape impact, but a more localised impact if the site is developed. Given the scale of development a negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation. Criteria within the policy seek measures to protect and strengthen environmental features which contribute towards the character and biodiversity of the surrounding countryside and mitigation through the provision of green infrastructure including the	-1

			protection of amenity local space. Given the above mitigation measures, but the potential impacts on landscape, a slight negative effect is considered.	
B) Protection and promotion of a quality built and historic environment	The site occupies a large area in a landscape with evidence of prehistoric and Roman activity in the vicinity. Any planning application for development here will need to be supported by the results of an appropriate level of archaeological works to allow the significance of the heritage asset to be understood along with the impact of the development upon it. An overall slight negative and uncertain effect is considered.	-1/?	Criteria within the policy seek mitigation through archaeological mitigation.	0/?
C) Mitigating the effects of climate change	Kia Ora Farm and fishing lakes to the west of the site. The Cole Brook runs from the east circling the bottom half of the site, and then parallel to boundary (on south east side). Approximately 1.6 ha of the site lies within Flood Zone 2 & 3 and 1 ha of the site lies within the functional floodplain. The remainder of the site (16.7ha) lies within Flood Zone 1. One Critical Drainage Area is identified at Cullompton. A Flood Risk Assessment will be required at the planning application stage to determine specific recommendations for mitigation. However, Cullompton is well served by a local and wider bus service which could help reduce car travel and therefore carbon emissions. Taking into account flood risk but the provision of a regular bus service an overall negative effect is considered.	-2	Criteria within the policy seek mitigation measures through retention of land in the floodplain as informal amenity open space. A policy requirement in the Local Plan Review seeks mitigation through the provision of Sustainable Urban Drainage Systems to deal with surface water run-off and arrangements for future	+1

			maintenance. Policy S11 Cullompton supporting text acknowledges the Critical Drainage Area at Cullompton and provides mitigation. Criteria within the policy seek carbon reduction and air quality improvements, this is required to minimise the overall carbon footprint of the development and ensure the impact of the site on air quality is acceptable, a slight positive effect.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land which would be lost if this site is developed. Policy would result in the loss of 0.2 ha of grade 1 excellent quality agricultural land, 14.8 ha of grade 2 very good quality agricultural land and 4.3ha of good to moderate quality agricultural land. Overall a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	Site does not result in a loss or gain of employment land. Development of this scale may be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact.	+1		+1
F) Supporting	Option is located some distance from the town centre. The policy	+2		+2

retail	contains no retail proposals, however the high street could benefit from the custom of the residents from this development. Given the scale of development within a town, a positive effect is considered.			
G) Meeting housing needs	Option provides for 400 new dwellings of which 28% should be affordable a contribution towards future housing need, a significant positive effect.	+3		+3
H) Ensuring community health and wellbeing	Cullompton is a designated town under policy S11; it has numerous services as outlined in S11 and is considered appropriate for development. The site is located some distance from the town centre. The option will have some impact on Cullompton Air Quality Management area which will require some mitigation. The option could contribute towards light and noise pollution, a slight negative effect. The site includes 1.1ha of informal open space, allowing opportunities for outdoor play. Balancing all factors, a slight negative impact is considered overall.	-1	Criteria in the policy require the implementation of a Transport Plan and other measures to minimise carbon footprints and air quality impacts. Policy S11 seeks to continue providing measures to support the implementation of the Cullompton Air Quality Action Plan including new highways links to relieve the town centre and enhance walking and cycling opportunities around the town. Overall, a neutral effect is considered.	0

I) Delivering the necessary infrastructure	The width of Colebrook Lane from Swallow Way may present difficulties with access and would need to be substantially upgraded. Development in this location would increase traffic on Tiverton Road, so would not be permissible until a new link road linking Tiverton Road to Willand Road has been provided under Policy CU1. The requirements for a transport assessment are an uncertain effect. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for new primary places in Cullompton. The two schools in the town, St Andrews and Willowbank currently accept more pupils than their planned admission number for the size of the school and facilities available there. There are two secondary schools located within this Local Learning Community, including Cullompton Community College which currently has 283 places spare capacity and Uffculme School, which currently admits 113 pupils more than its planned admission number. It will therefore be necessary to expand the secondary schools in the Local Learning community.	-2	Some mitigation may be provided through seeking appropriate access points and ensuring development does not take place until the Town Centre Relief Road has been required however given the scale of this scenario, the full allocation would be significant enough to affect the wider local road network and therefore a negative effect is considered.	-2

Secondary/cumulative/synergistic effects:	The cumulative impact of the development of this site has the potential to impact upon traffic congestion and associated air quality issues. Development of the site in combination with other development in the local area could cumulatively lead to overcapacity issues in the local schools however other policies in the plan propose additional primary schools within Cullompton.
Temporary/permanent effects :Timescale: Short	Within the short term, construction traffic associated with the development may

(1-5 years), Medium (6-15 years), Long (15+ years)	exacerbate traffic problems in Cullompton however the site will only come forward following the completion of the North West Cullompton through route linking Tiverton Road to Willand Road. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Alternative Option New Site Cullompton – Tiverton Road

Land with a gross site area of 0.54 ha at Tiverton Road, Cullompton is proposed for 16 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'main cities and towns' and the 'lower rolling farmed and settled valley slopes' landscape character areas. Development of the site is unlikely to have any negative impact on biodiversity. The site is located within the existing settlement limit for Cullompton and is screened by surrounding development and therefore there is likely to be no impact on landscape character. Overall a neutral effect.	0	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review could potentially provide an improvement given that the site is currently a brownfield site. Therefore, a slight positive effect is considered.	+1
B) Protection and promotion of a quality built and historic environment	There are no listed buildings located in close proximity. This proposed development site lies to the west of an area where previous archaeological work has exposed evidence of Neolithic activity as well as Iron Age and Romano-British activity. Similar heritage assets are likely to extend into the area under consideration here. An overall slight negative and uncertain effect is considered.	-1/?	If the policy requires archaeological investigations and appropriate mitigation measures, overall a neutral effect although this remains uncertain as the impact will depend on the results of the	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			investigation.	
C) Mitigating the effects of climate change	The site falls within the Cullompton Critical Drainage Area as defined by the Environment although it is also in the lowest flood risk zone 1. There could be risk of additional development here increasing the risk of flood risk. Overall a negative effect is considered.	-2	A policy requirement in the Local Plan Review seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Policy S11 Cullompton supporting text acknowledges the Critical Drainage Area at Cullompton which provides mitigation, overall a neutral effect is considered given the mitigation.	0
D) Safeguarding and minimising resource use	This site is located on previously developed land. A positive effect.	+2		+2
E) Promoting economic growth and employment	No impact	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
F) Supporting retail	No impact	0		0
G) Meeting housing needs	Option provides for 16 new dwellings contributing towards future housing needs, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Development of the site would result in the loss of a Place of Public Worship. There could be an impact on Cullompton Air Quality Management Area which will require some mitigation. Considering the loss of community facility and the potential impact on air quality, overall a significant negative effect is considered.	-3	If mitigation is provided for air quality impacts in the policy. If relocation of the local community facility is provided a neutral effect is considered, however this is uncertain as although the promoter suggests the redevelopment would not result in the loss of a local community facility as a new better site is preferable in a better location for congregation, the promoter has not given sufficient detail to be certain of this provision. As such a neutral although uncertain effect is considered.	0/?
I) Delivering the	The site is within St Andrews' designated area. This school has no	0/?		0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
necessary infrastructure	spare capacity and is on a constrained site, limiting potential for expansion. The site is adjacent to a large development site, which would include a primary school. Primary school capacity for this site is likely to be available within the proposed primary school. Cullompton Community College currently has some spare capacity and could be expanded if additional land is secured. The site has two clear potential access routes, one adjacent to the substation and one coming through Olympian Way. Given that there are two suitable access options and that there is likely to be capacity within the new proposed primary school a neutral and uncertain effect is considered as there are various elements to school capacity that are unknown e.g. provision of new primary school on adjacent site, in-sync with the development proposed on this site.			

Secondary/cumulative/synergistic effects:	The cumulative impact of the development of this site has the potential to impact upon traffic congestion and associated air quality issues. Development of the site in combination with other development in the local area could cumulatively lead to overcapacity issues in the local schools however new primary schools are proposed within other allocations for Cullompton.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development may exacerbate traffic problems in Cullompton. Once completed the development will be permanent.

Spatial extent: (District wide/local)	This site option will help meet housing needs.

Land at Junction 27

Additional Appraisals for Land at Junction 17

Preferred Option J27 – Policy J27 – Land at Junction 27 of the M5 Motorway: 71ha mixed commercial floorspace

A site of 71 hectares between M5 Junction 27 and Willand is allocated for mixed commercial floorspace including a travel hub, agronomy visitor centre, outdoor adventure zone and outlet shopping village. The policy includes transport provision, environmental protection, a comprehensive phasing programme and public master planning exercise.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are some important trees to the north of the site and in close proximity to a number of TPOs. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. Development of this scale would have a significant impact on existing landscape character, altering the rural quality of the entrance into Mid Devon from the M5 and the rural character around Willand and Sampford Peverell. Landscape sensitivity is higher, primarily because of the lack of a relationship with an existing settlement, and the change to landscape character that would arise as a result. There are views available into the site from the west, as far as the canal in Sampford Peverell, whereas some parts feel isolated, with reduced visibility –	-3/?	The policy requires environmental protection and enhancement including noise mitigation. Furthermore Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment. The policy requires mitigation measures for the Culm	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	though some parts are visible from the motorway. There are differences in character/visibility between the north and south, the north being more open and plainly visible, the south less so. The landscape appraisal for this site noted that employment development would potentially be more damaging from residential development owing to the larger scale buildings and infrastructure needed. A Phase I habitat survey for the northern commercial element of the site (Devon Biodiversity Records Centre, June 2014) was undertaken. The site includes a variety of habitat types including Biodiversity Action Plan habitats. The mature trees and hedgerows within the site were also identified as important for biodiversity. Natural England expressed the potential for the proposed leisure and retail development at J27 to impact on the Culm Grasslands SAC due to traffic impacting the air quality. Further information regarding traffic assessments and any consequential air quality assessment on the effects on this SAC will have to be undertaken to rule out any effect. Given the scale of development, impact on the landscape, biodiversity and potential impact on the Culm Grasslands SAC, overall a significant negative impact is considered although this remains uncertain.		Grasslands SAC where appropriate and the allocation will be subject to comprehensive masterplanning. Given the scale of development some landscape and biodiversity impact is likely to remain however mitigation provided helps to minimise the impact. The area considered is less than that appraised in the Proposed Submission SA and the proposal now considers mitigation if there is an impact on the Culm Grasslands SA, as such overall a slight negative effect is considered.	
B) Protection and promotion of	Since the Proposed Submission SA, a Historic Environment Appraisal (HEA) has been carried out including an assessment of the J27 policy in the modifications document and this SA has been updated to	-2/?	The policy requires high quality development as part of the allocation. The policy also	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
a quality built and historic environment	reflect this latest assessment. The HEA identified that there are listed buildings close to the site and there may be some impact the immediate settings of these buildings. To some degree there will be an impact on the registered park and garden at Bridwell which is set on rising land to the east. To a limited degree the landscape settings of Sampford Peverell conservation area and the Grand Western Canal conservation area will also be affected. There is some uncertainty in the exact impact of the allocation given this will be dependent on site layouts, density, scale and design of buildings. This site occupies a substantial area within a landscape that has evidence of prehistoric and Roman activity, overall a negative and uncertain effect.		requires comprehensive masterplanning including at least two stages of public consultation and adoption of the masterplan as a Supplementary Planning Document before any planning application for any part of the site is determined. The HEA identifies opportunities to offset the visual impacts on the settings of various heritage assets. These opportunities are likely to be explored in detail as part of the masterplan which will provide mitigation. The potential archaeological impact at this stage could also be explored along with mitigation. As such a neutral effect is considered however this remains uncertain given the masterplan is not yet	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			adopted.	
C) Mitigating the effects of climate change	The site contains a number of small streams but is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. The site could also contribute to surface water run off without appropriate mitigation measures. Given the scale of development carbon emissions could be high. Overall a significant negative effect and uncertain effect is considered given the potential but unknown impact of the small streams, the potential contribution to surface water run off and increased carbon emissions. Trips to the allocation are not all considered new journeys with the Mid Devon Tourism Study 2014 identifying a large volume of tourists who pass through Mid Devon on route to other destination. Furthermore, the proposal is for a niche market currently poorly provided for in the South West, arguably this proposal will reduce trip lengths of those currently seeking these services.	-2/?	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A flood risk assessment will be required as even though the site is in flood zone 1 it is over 1ha which will determine the impact of the small steams. The proposal promotes an electric car hub and provision of transport improvement to ensure appropriate accessibility for all mods including pedestrian and cycling links across the motorway to Tiverton Parkway Railway Station. The Mid Devon Tourism Study 2014	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			identifies a large volume of tourists who pass through Mid Devon on route to other destination. Trips to the allocation are not all considered new journeys with some of those who would previously pass through Mid Devon anticipated to stop at this destination. Overall a slight negative effect is considered although this remains uncertain.	
D) Safeguarding and minimising resource use	Part of Junction 27 borders the Mineral Consultation Area for Hillhead Quarry. Since the Proposed Submission Sustainability Appraisal, given the smaller site area and updated Devon County Council Minerals Plan (proposed for adoption) it is considered the development of the site will not constrain future working of the remaining permitted reserves within Hillhead Quarry. The site is located on mainly greenfield land with a small portion on brownfield land. The majority of the site is Grade 3 good / moderate quality land with a small section of the site to the west of the M5 grade 4 poor quality land. Given the scale of the development, on Grade 3 agricultural land a	-2		-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	negative effect is considered.			
E) Promoting economic growth and employment	This option provides a site of 71 ha of commercial floorspace helping to diversify the economy and encourage inward investment, a significant positive effect. The policy states the allocation is for a major high quality regional tourism, leisure and retail attraction. Development in this location and at this scale has the potential to bring major inward investment and job creation for Mid Devon and the wider region.	+3		+3
F) Supporting retail	The option will deliver a 6ha designer outlet shopping centre, which will include up to 14,000 square metres of controlled comparison goods and up to 2,000 square metres of A3 uses. Since the Proposed Submission Sustainability Appraisal a number of town centre uses have been withdrawn from the earlier promoted schemes and a retail impact assessment has been used to determine the impact. This included an assessment of 14 towns and city centres including those outside of Mid Devon District and concluded that all centres would continue to achieve higher future trading turnovers than at the assessment year. The study also sets out how designer outlet villages differ from that in town centres and how they can be controlled by planning. Given the changes proposed to the policy and the findings of the retail impact assessment, the proposal significantly enhances the retail offer of the district a significant positive impact is considered.	+3	Limitations and controls provided in the policy have been provided since the previous assessment of this site. A retail impact assessment has also determined that all centres would continue to achieve higher future trading turnovers than at the assessment year. As such a significant positive impact is considered.	+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	No additional housing is provided within the site. The Local Plan will provide for the additional housing required in response to the employment opportunity provided by this allocation. Please see Secondary/cumulative/synergistic effects below for additional information. In assessing this site and in considering that the housing needs will be met by the Local Plan a neutral effect is considered.	0		0
H) Ensuring community health and wellbeing	The proposal differs from that assessed in the Proposed Submission Sustainability Appraisal in which it meets a regional need and not an alternative for the housing and commercial needs of the towns as such the findings of this SA differs from that of the proposed submission version. The proposal will provide some benefit to existing and future communities in which it provides leisure and retail opportunities overall a slight positive effect is considered.	+1		+1
I) Delivering the necessary infrastructure	Further assessment work is needed to identify the transport impact, sustainable transport options and strategic infrastructure requirements an uncertain effect. Essential service infrastructure including; water supply, sewage works capacity, gas and electricity will need to be determined as deliverable. Overall a negative and uncertain effect is considered.	-2/?	The policy seeks the provision of supporting access roads, parking, infrastructure and landscaping of 43ha. It requires transport improvements to ensure appropriate accessibility for all modes, including new or improved access and egress onto the M5 motorway and pedestrian and	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			cycling links across the motorway to Tiverton Parkway Railway Station. The proposal also incorporates an electric car hub. Furthermore comprehensive masterplanning is required by policy will provide greater detail on delivering the necessary infrastructure. The policy also requires environmental protection and enhancement with the supporting text referencing the provision of green infrastructure. Overall a positive effect is considered, the uncertainty remains as the detail of providing the necessary infrastructure will be considered at the masterplanning and planning application stage.	

Secondary/cumulative/synergistic effects:	A secondary effect of developing major high quality regional tourism, leisure and retail attraction at Junction 27 is the need for additional housing sites in response to the additional commercial development. This is provided for through the proposed allocation of Blundells School, Tiverton and Higher Town, Sampford Peverell. There will be a cumulative impact of traffic on the surrounding road network. The policy requires transport improvements to ensure appropriate accessibility for all modes. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Development will occur throughout the lifetime of the plan and the effect should be considered permanent.
Spatial extent: (District wide/local)	The policy set seeks to meet the employment needs of the District and wider region.

Rural Areas

Additional Appraisals for Bampton allocations

Preferred Option Bampton – Former School, School Close

Land with a gross site area of 0.7 (ha) at the Former School, School Road, Bampton is proposed for 26 residential dwellings with 38% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'River valley slopes and combes' landscape character area, which is defined as having steep, often wooded sides. An oak tree that sits within the boundary of the site should be retained. There are views over the town to the north and east, hedges and trees along Ball Hill mark the skyline to the south of the site. Wildlife corridors can be established through the site and the adjacent old school to enhance biodiversity. An ecological survey in 2009, note that dormice are known to be present in this part of Devon, rabbit tracks have been found but no badgers. Given the potential impacts on local wildlife, a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provides some mitigation. An overall neutral effect is considered.	0
B) Protection and promotion of a quality built and	The development site is not within or near the Bampton Conservation Area and development will not impact upon any Listed Buildings, a neutral effect.	0		0

historic environment				
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Bampton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water runoff but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan review seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Given the mitigation of surface water runoff and flood risk a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	This is a Greenfield site currently used as pastureland. Approximately a fifth of the site is Grade 3 good / moderate quality agricultural land and the remainder is Grade 4 poor quality agricultural land. Although the loss would be mainly poor quality agricultural land there would be some grade 3 agricultural land loss an overall slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land, a neutral effect.	0		0
F) Supporting retail	The policy contains no retail proposals; a neutral effect is considered.	0		0

G) Meeting housing needs	Option provides for 26 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Bampton is a designated village under policy S13 of the Local Plan Review and is considered appropriate for limited development. Bampton has a reasonable range of services and frequent bus services. The school is adjacent the site enabling public to walk, new development supported by existing services Overall a neutral effect is considered.	0		0
I) Delivering the necessary infrastructure	The site would gain vehicular access via West Street which on its approach to the site is narrow and has no pedestrian facilities. It may be possible to provide a footway/cycleway access between the site and School Close passing though the adjacent old school site. The feasibility of the carriageway link to the adjacent site has been considered and is acceptable, a positive effect. Primary school has recently been expanded to support increased numbers in area and existing consents. Given site access is achievable and recent expansion of school a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impact of the development of this site has the potential to impact upon traffic congestion.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic congestion within Bampton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet the employment needs of Bampton.

Additional Appraisals for Cheriton Fitzpaine allocations

Alternative Option OCF2: Cheriton Fitzpaine Landboat Farm – Amended SA commentary and scoring

Land with a gross site area of 1.91 (ha) at Landboat Farm, Cheriton Fitzpaine is proposed for 55 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are several mature trees, mainly horse chestnuts, within the site. The site is classed as being within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is defined as being predominantly open, rolling countryside (and further characterised by a tightly rolling, medium to small scale landform). Upon a further site assessment undertaken in response to a representation at the Proposed Submission stage it has been concluded that the existing development forms a backdrop of the site and therefore a neutral effect is considered in terms of landscape impact. A slight negative impact remains as there may be an impact on the mature trees within the site.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for the natural environment and a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	There are no listed buildings although there are some undesignated older (C19) farm buildings sited within the site and which may be worthy of retention as local heritage assets. As the buildings at this time are not designated as heritage assets they do not at this time hinder the score of the objective of this site, however if the buildings are to be assessed as heritage assets in future the SA will be amended to reflect this. In response to a representation made at the Proposed	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Submission stage a further site assessment was undertaken and it is agreed that the development of the site would impact the connectivity between White Cross and the village resulting in a slight positive score overall.			
C) Mitigating the effects of climate change	A stream runs along the southern part of the site. The southwest of the site is within flood zone 2 and 3 (17%) with the remaining (83%) in flood zone 1. The site could contribute to surface water run off without appropriate mitigation measures. Overall a negative effect is considered. Cheriton Fitzpane has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service, on balance a slight negative effect is considered. This remains uncertain as the impact of the stream is unknown.	-1/?	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. If development avoided areas in flood zone 2 and 3 and a flood risk assessment is undertaken to determine the impact of the stream that runs through the centre of the southern part of the site a neutral effect is considered. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			service. This remains uncertain as the impact of the stream is unknown.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Site is located on Grade 3 good / moderate agricultural land with some of the site forming agricultural buildings. Given the relatively small size of the site a slight negative impact is considered.	-1		-1
E) Promoting economic growth and employment	In the south western part of the site, there is a group of buildings which are modern, open agricultural storage buildings and other storage facilities. Also contained within the site are a group of three traditional stone barns which link together to form a central yard. In response to a representation made at the Proposed Submission stage a further site assessment was undertaken and it is agreed that the buildings identified above are vacant with no evidence of recent use, therefore there would be no loss of employment land and the pre-mitigation score is proposed to be amended to 0.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 55 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring	Cheriton Fitzpaine is a designated village under policy S13, it has the	0	Retention of the land used for	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
community health and wellbeing	three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect. Some of the land (the strip to the south of Cherry Meadow) already forms some form of informal recreational use with at least one resident having an opening from private gardens onto this land. Under previous planning policy this piece of land was designated as 'Important land for sport and recreation'. In response to a representation made at the Proposed Submission stage it is recognised that development of this site would link the village with White Cross and as such could improve both the built environment and community health and wellbeing. Given the provision of services and facilities, and potential for improvement of community cohesion but potential loss of some important although undesignated recreational land, a neutral effect is considered.		informal recreation and the benefit of improving community cohesion through the development of this site would result in a slight positive effect overall.	
l) Delivering the necessary infrastructure	Access into the site is via a farm track, formed within the past 10 years located approx. mid way along its northern boundary and with a large visibility splay with the Class lll road, and has new Devon banks either side; this access has replaced the original farm access road along the western edge, which has been partially blocked at its egress onto the Class lll road to only now allow for direct pedestrian access on this side. The local highway network of narrow roads has restrictive alignments and the existing access has inadequate visibility however an adequate access is considered achievable. In response to a	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	representation made at the Proposed Submission stage a further site visit was undertaken which identified that an access could be accommodated without significant works. There is existing capacity in the local schools to accommodate development from this individual site. Overall a neutral effect is considered.			

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Fitzpaine. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Alternative Option New Site Cheriton Fitzpaine – Bramble Orchard

Land with a gross site area of 2.44ha at Bramble Orchard, Cheriton Fitzpaine is proposed for 58 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural	This site lies outside of the existing settlement boundary of Cheriton Fitzpaine. The site falls within the 'Lower rolling farmed	-2	Policy S9 'Environment' and DM1 'High Quality Design' in	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment	and settled valley' landscape character areas which is typified as having a gently rolling and strongly undulating landscape which is intensively farmed. The landscape is undulating, with the higher parts more sensitive to change and development. The site is located at the top of a hill and would therefore be highly sensitive to development. There are no European wildlife sites or SSSIs located in close proximity to the site and there are no designations located within the site itself. However, the site borders Arthur's Wood which is probably a priority habitat. Given that the site is located outside of the existing settlement limit, and would have a significant negative impact on landscape character, a negative effect is considered.		the Local Plan Review would provide some mitigation. Overall a negative effect remains as the development is located outside of the existing settlement limit and would negatively impact landscape character.	
B) Protection and promotion of a quality built and historic environment	There are no listed buildings located in close proximity. Additionally, based on the information available to the Historic Environmental Record to date it is unlikely that any development will have an impact upon any heritage assets with archaeological interest. However the separation of the site from the main element of the village raises concerns about how well the final design could integrate the existing and proposed development, overall a slight negative effect is considered.	-1	Design could help provide some mitigation in integrating the development with the existing settlement, however due to the divorced nature of the site with the main settlement a slight negative effect would remain.	-1
C) Mitigating the effects of climate	There are no flood risk issues within the site boundary to be aware of. Cheriton Fitzpaine has access to a bus service which could help reduce car travel and therefore carbon emissions.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
change	Overall a slight positive effect is considered.			
D) Safeguarding and minimising resource use	Development is located on a greenfield site which is grade 3 good / moderate agricultural land. Given the size and agricultural quality of the site, a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No Impact.	0		0
G) Meeting housing needs	Option provides for 58 new dwellings contributing towards future housing needs, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Cheriton Fitzpaine is a designated village under policy S13 and is considered suitable for limited development. The site is divorced from the settlement which may affect community cohesion, a slight negative effect.	-1	A slight negative effect would remain as the site is divorced from the settlement.	-1
I) Delivering the necessary infrastructure	Cheriton Fitzpaine primary school has the capacity to expand through the provision of an additional classroom. The school is located on the edge of the village, so would need to consider whether a safe walking route to the school can be provided. The site is very remote from Cheriton Fitzpaine and would be reliant	-2	Policy S8 could provide some mitigation by setting out that developers would be expected to contribute to, or bear the full cost of new or improved	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	on private motor vehicles as there are no footways and no lighting. There are also concerns relating to the topography of the site and road widths which result in a poor forward visibility from the site. Overall a negative effect is considered.		infrastructure and facilities although the impact remains uncertain given that it is unclear how improved access could be provided and suitable pedestrian access. A negative although uncertain effect remains.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure of services and facilities and impact landscape character.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Fitzpaine. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Additional Appraisals for Halberton allocations

Alternative Option New Site Halberton – The Pethers

Land with a gross site area of 0.51ha at The Pethers, Halberton is proposed for 16 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies adjacent to the designated village of Halberton. The site falls within the 'Lowland Plains' landscape character area which is typified as being an open, low lying flat landscape which is agriculturally prosperous. The Great Western Canal Conservation Area and local nature reserve lies to the west of the site but there are no European wildlife sites or SSSI designations in close proximity. The site would be relatively enclosed within the landscape due to its location between 'The Pethers' and 'Lagunas' and its position directly opposite the new housing development Cordwents View. Given the sites location in relation to existing settlement but its proximity to the Great Western Canal Conservation Area and local nature reserve, a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	There are no heritage assets located in close proximity overall a neutral effect is considered.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. Based on evidence set out in the SFRA there may be some residual flood risk from the Grand Western Canal. The site could contribute to surface water run off without appropriate	-1	Mitigation is provided by a policy requirement in the Local Plan Review which seeks the provision of a Sustainable	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	mitigation measures. Halberton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service, on balance a slight negative effect is considered.		Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance. Appropriate mitigation measures should be incorporated into the design of development to respond to flood risk from the Grand Western Canal. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service in Halberton.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on grade 1 excellent quality agricultural land. Given the loss of Grade 1 excellent quality agricultural land but the relatively small scale of the site, a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting	No Impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
retail				
G) Meeting housing needs	Option provides for 16 new dwellings contributing towards future housing needs, a slight positive effect is considered.	+1		+1
H) Ensuring community health and wellbeing	Halberton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Halberton Primary School currently has some spare capacity. This site would generate an additional 5 primary school pupils, which can be accommodated at the primary school. Given the small scale of development it is anticipated that this development will not as an individual site put pressure on the local secondary schools. The site would need an estate road to serve the development which may restrict the yield of housing. Given the current capacity within the local schools and that access to the site is achievable a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impact of the development of this site has the potential to impact upon traffic, put pressure on services and faciltiies and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over-capacity issues in the local schools.
Temporary/permanent effects :Timescale: Short	Within the short term, construction traffic associated with the development will increase

(1-5 years), Medium (6-15 years), Long (15+ years)	traffic along Crown Hill Road, Halberton. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Additional Appraisals for Newton St Cyres allocations

Alternative Option New Site Newton St Cyres – New Estate Site A

Land with a gross site area of 1.4ha at New Estate, Newton St Cyres is proposed for 44 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland Plains' which is typified as being an open, low lying flat landscape and the 'sparsely settled farmed valley floors' landscape character area which is typified by the presence of rivers and streams and related flat or gently sloping valley bottoms within the low lying areas of the district. The site is relatively open and flat with the surrounding landscape consisting of agricultural land, trees and occasional isolated dwellings. There are no European wildlife sites or SSSI designations located in close proximity. Overall the site has a slight negative score as the site is highly visible but there is existing development forming a backdrop.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of	There are no listed buildings located in close proximity. This proposed development site lies within a landscape where there is a concentration of prehistoric and Romano-British sites recorded	-1/?	Local Plan Review policy DM25 would provide some mitigation by requiring that any planning	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
a quality built and historic environment	on the County Historic Environment Record. Given the possibility of potential for archaeological assets, a slight negative and uncertain effect is considered.		application include sufficient information to enable a description of a heritage asset affected and a consideration of the impact of development upon it. Based on information from Devon County Council this may take the form a programme of intrusive archaeological investigations of areas that will be affected by development here. Overall a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located outside in flood zone 1. However, an ordinary watercourse is within the site boundary. The site could contribute to surface water run off without appropriate mitigation measures. Newton St Cyres has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issue around flooding with the presence of an ordinary watercourse and risk of surface water	0/?	Some mitigation would be provided through policy S9 'Environment' in the Local Plan Review which seeks the provision of sustainable drainage systems to deal with all surface water from the	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	flooding but the benefit of a bus and train service overall a neutral and uncertain effect is considered as the impact of the watercourse is unknown.		development. Based on the recommendations provided by Devon County Council, this may require that any development should be accompanied by a suitable drainage strategy to deal with existing surface water flows and any potential increase in surface runoff. Given the mitigation of flood risk using SuDS, and the availability of bus and train service, a positive effect is considered although uncertain given the presence of the ordinary watercourse within the site boundary.	
D) Safeguarding and minimising resource use	Development is located on a greenfield site which is partly (1.11ha) grade 3 good / moderate agricultural land and partly (0.29 ha) grade 1 agricultural land, a negative effect, given the size of the site.	-2		-2
E) Promoting	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
economic growth and employment				
F) Supporting retail	No Impact.	0		0
G) Meeting housing needs	Option provides for 44 new dwellings contributing towards future housing needs, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Newton St Cyres is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	There is existing capacity in the local schools to accommodate development from this individual site. Access to the site option is quite constrained; the junction at Station Road adjacent to the entrance is substandard in terms of visibility and is unlikely to be suitable for increased traffic. The road is narrow with substandard alignments and there are no footways. Highways have raised their concerns over pedestrian safety and have recommended the rejection of this allocation. Given the concerns of the highways agency a significant negative effect is considered.	-3	Policy S8 would provide some mitigation by setting out that developers would be expected to contribute to, or bear the full cost of new or improved infrastructure and facilities. Overall a negative and uncertain effect is considered given the concerns of the highway authority with the solution uncertain without	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			further evidence.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to overcapacity issues in the local schools.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Newton St Cyres. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Alternative Option New Site Newton St Cyres – New Estate Site B

Land with a gross site area of 1.3ha at New Estate, Newton St Cyres is proposed for 41 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland Plains' and 'Sparsely settled farmed valley floors' landscape character areas. The site itself is relatively open and is surrounded by agricultural land, trees and the occasional isolated dwellings. There are no European wildlife sites or SSSI designations in close proximity and no specific designations within the site that would impact on biodiversity. Given that development here would impact landscape character	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation therefore a slight negative effect is considered.	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	with limited development backdrop, a negative effect is considered.			
B) Protection and promotion of a quality built and historic environment	There are no listed buildings located in close proximity. The site lies within a landscape where there is a concentration of prehistoric and Romano-British sites recorded on the County Historic Environment Record. 	suitable for increased traffic. The road is narrow with substandard alignments and there are no footways. Highways have raised their concerns over pedestrian safety and have recommended the rejection of this allocation. Given the concerns of the highways agency a significant negative effect is considered.		full cost of new or improved infrastructure and facilities. Overall a negative and uncertain effect is considered given the concerns of the highway authority with the solution uncertain without further evidence.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to overcapacity issues in the local schools.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase the traffic within Newton St Cyres. Once complete the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Additional Appraisals for Sampford Peverell allocations

Preferred Option SP2 – Higher Town, Sampford Peverell: 6ha, 60 dwellings

Land with a gross site area of 6 (ha) at Higher Town, Sampford Peverell is proposed for 60 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The overall rise above Turnpike is significant and there are far-reaching views to and from the site. If suitable access could be achieved, given the steep gradients, it is likely that a substantial length of hedgerow would need to be removed. Visually the character of the area is agricultural and divorced from the village, with only a few low density detached dwellings on the opposite side of Turnpike. Given the impact on the landscape but limited mitigation provided by existing development and potential loss of a substantial length of hedgerow a negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment. Furthermore the policy requires landscaping and design which respects the setting and character of the area. The policy also requires mitigation of any wildlife impact including the protection of hedgerows and provides 2 hectares of Green Infrastructure. Overall a neutral effect is considered.	0
B) Protection and	The site is adjacent to Sampford Peverell Conservation Area to	-2/?	The policy includes green	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
promotion of a quality built and historic environment	North East. The site occupies an area enclosed in the medieval period and archaeological remains associated with the earlier field system and archaeological remnants may be affected by development here. Given the potential impact on the Conservation Area and archaeology a negative and uncertain effect is considered.		infrastructure, landscaping and design which respect the setting and character of the area, conservation area and listed building. It also requires archaeological investigation and appropriate mitigation. Overall a neutral effect is considered although this remains uncertain as the impact on archaeology will depend on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Sampford Peverell has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and flood risk but the benefit of a bus and train service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. The surface water run off and flood risk can be mitigated and there is a	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			benefit of a bus and train service, overall a positive effect is considered.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 very good quality agricultural land. Given the loss of very good quality agricultural land but the relatively small site area an overall negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 60 new dwellings with 30% affordable housing a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Sampford Peverell is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Since the Proposed Submission Sustainability Appraisal, there has been confirmation that access is achievable and therefore the uncertainty has been removed. The Highway Authority has advised that any development of the site should only commence	-1	Improvement of the site access would improve visibility. Policy requires no development until the	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	once improvements to the A361 junction at Sampford Peverell have been implemented. There is a footpath on Turnpike from the south east corner of the site which leads into the village. There are no footpaths on Higher Town or on Turnpike to the west. Within the village, pedestrian and cycle links are good, with access to the Grand Western Canal and the cycle path connecting the train station to Tiverton and Willand. Access onto Turnpike would require substantial hedgerow and earth removal. There is existing capacity in the local schools to accommodate development from this individual site. Given that access is achievable but would require additional works a slight negative effect is considered.		completion of improved access works to the A361. Overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site may have an impact on traffic. The policy requires no development until the completion of improved access works to the A361 to ensure the cumulative effect on the A361 is mitigated for.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase the traffic within Sampford Peverell. Once complete the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs associated with the Junction 27 option.

Additional Appraisals for Thorverton allocations

Alternative Option TH1: South of Broadlands – extended site 1.15ha, 20 dwellings

Land with a gross site area of 1.15 (ha) at South of Broadlands, Thorverton is proposed for 20 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is partially screened by the topography of the land adjacent to the east, known as Peter's Hill. There are distant views of the site from the west, but this could be limited through the use of screening. The site itself is fairly level and there would be limited visual impact on the character of Thorverton. As there are distant views of the site from the west a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide mitigation and therefore, and overall neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	The site lies just to the north of a large, probably prehistoric enclosure site, a slight negative and uncertain effect.	-1/?	The policy will require archaeological investigation and appropriate mitigation, a neutral effect is considered overall although this remains uncertain as the impact will depend on the results of the investigation.	0/?

C) Mitigating the effects of climate change	Part of the site (south eastern) is within Zone 3 Source Protection Zone. The site is located in flood zone 1, the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Thoverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered.	-1	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. As the site is within a Source Protection Zone, appropriate forms of sustainable urban drainage should be used, overall a neutral effect.	0
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 1 agricultural land. As the site is small scale but is on excellent quality agricultural land a negative impact is considered.	-2		-2
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land, a neutral effect.	0		0
F) Supporting retail	Site option does not contain any retail proposals, a neutral effect.	0		0
G) Meeting housing needs	Option provides for 20 new dwellings with 30% affordable a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community	Thorverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered	-2	If the allotments were provided elsewhere of similar	+1/?

health and wellbeing	appropriate for a limited level of development, a neutral effect. Development of the site would result in the loss of allotments overall a negative effect is considered.		accessibility the loss of allotments would be mitigated and therefore this impact would be neutral. The policy requires a road widening and provision of a footpath along site frontage which in this case will be beneficial for the wider community as well as the development. Overall a slight positive effect is considered although this is uncertain given an alternative location for the allotments has not been indicated.	
I) Delivering the necessary infrastructure	Access is achievable but would require road widening and footway link. The size of this alternative would require the road to be built to an adoptable standard with a carriageway width of 4.8m and 2x2m footways either side in order to provide adequate visibility to and from oncoming traffic. The access road would need to go through the garages currently near the site. The Mid Devon Community Infrastructure Evidence Report indicates that the local secondary school has capacity however; Thorverton primary school is at overcapacity. The school is popular and has historically admitted pupils from outside its catchment area. Despite the forecast	-3	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new improved infrastructure and facilities. Overall a neutral effect is considered. If the policy requires road widening built to an adoptable standard with a carriageway width of	0/?

	showing the school to be overcapacity, it is likely that children within the small development will be able to secure a place at the school but developer contributions will be required. Given the need for significant road improvements and footway link and the requirement for developer contributions to provide capacity at the school a significant negative effect is considered.		4.8m and 2x2m footways either side in order to provide adequate visibility this would mitigate any impact and a neutral score is considered. However this would require the garages to be in control of the applicant in order to meet this standard, given the garages are not in control of the applicant an uncertain effect remains.	

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to overcapacity issues in the other schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Thorverton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Alternative Option New Site Thorverton – Land North East of Silver St

Land with a gross site area of 0.35 ha at the North East of Silver Street, Thorverton is proposed for 13 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland Plains' landscape character area which is typified as being an open, low lying flat landscape. Most parts of the site are well enclosed within the landscape with no far reaching views other than towards the south whereby views consist of agricultural fields and trees. The site is enclosed by a hill towards the south and existing housing development towards the east and west. Given that development of this site would have a good relationship with existing development a neutral effect is considered.	0		0
B) Protection and promotion of a quality built and historic environment	There are no listed buildings located in close proximity. In addition, based on the information available to the Historic Environment Record to date, any development here will have no impact upon any heritage assets with archaeological interest. Therefore, a neutral effect is considered.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. There are a no flood risk issues within the site boundary to be aware of. Thorverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Overall a slight positive effect is considered.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
D) Safeguarding and minimising resource use	The site is located on a greenfield site which is grade 2 good quality agricultural land. A negative effect.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 13 new dwellings contributing towards future housing needs, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Thorverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The Mid Devon Community Infrastructure Evidence Report indicates that the local secondary school has capacity however Thorverton primary school is at overcapacity. The school is popular and has historically admitted pupils from outside its catchment area. Despite the forecast showing the school to be overcapacity, given the scale of the development it is likely that	-1	Policy S8 would provide some mitigation by setting out that developers would be expected to contribute to, or bear the full cost of new or improved infrastructure and facilities.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	children within this individual small development could secure a place at the school but developer contributions will be required. There are no significant constraints in terms of access, subject to an appropriate estate road. Given suitable access route, but limited capacity in the local Primary School, a slight negative effect is considered.		Overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site could lead to overcapacity issues in the local schools.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Thorverton. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Alternative Option New Site Thorverton – Land to the West of Lynch Close and Cleaves Close

Land with a gross site area of 1.32 ha at the West of Lynch Close and Cleaves Close, Thorverton is proposed for 41 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland Plains' landscape character area. The site is relatively enclosed by housing on the eastern side and hedgerows and trees surrounding the remainder. Given the	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	minimal impact on landscape character and the sites relationship to existing settlement, a neutral effect is considered.			
B) Protection and promotion of a quality built and historic environment	There is a grade II listed building (Higher Dunsaller) located adjacent to the southern boundary of the site. Furthermore, the site occupies a position in the landscape where prehistoric activity is recorded in the County Historic Environment Record. Given the sites close proximity to a listed building and the potential for archaeological assets, a negative and uncertain effect is considered.	-2/?	Local Plan Review policy DM25 would provide some mitigation by requiring that development proposals consider the significance, character, setting and local distinctiveness of heritage assets and any opportunities to enhance them. In addition, policy requires that any planning application include sufficient information to enable a description of a heritage asset affected and a consideration of the impact of development upon it. Based on information from Devon County Council this may take the form of 1) an archaeological geophysical	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			survey and 2) a programme of intrusive archaeological investigation of areas that will be affected by development here. Overall a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1. There are a no flood risk issues within the site boundary to be aware of. Thorverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Overall a slight positive effect is considered.	+1		+1
D) Safeguarding and minimising resource use	The site is located on a greenfield site which is grade 1 excellent quality agricultural land. A negative effect, given the size and scale of the site.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	Option provides for 41 new dwellings contributing towards future housing needs, a positive effect is considered.	+2		+2
H) Ensuring community health and wellbeing	Thorverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The Mid Devon Community Infrastructure Evidence Report indicates that the local secondary school has capacity however Thorverton primary school is at overcapacity. The school is popular and has historically admitted pupils from outside its catchment area. There may also be opportunities for expansion if required. There are no significant constraints in terms of access; there are possible access junctions from both north and south. The southern road presents greater opportunity to provide footway and road widening. Given suitable access route, but limited capacity in the local Primary School, a slight negative effect is considered.	-1	Policy S8 would provide some mitigation by setting out that developers would be expected to contribute to, or bear the full cost of new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity to expand the school. Overall a neutral effect is considered given that there is limited capacity to expand the school.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon

	traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site could lead to overcapacity issues in the local schools.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase within Thorverton. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Additional Appraisals for Uffculme allocations

Alternative Site Option - Land west of Uffculme, Uffculme

Land with a gross site area of 3.49 (ha) at Uffculme is proposed for 60 dwellings. Following an appeal decision in February 2016 allowing outline planning permission for a site of 3.49ha with 60 dwellings, the site has been reappraised taking into account the revised proposal and inspectors comments.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is within the 'Lowland plains' landscape character area. This area is characterised by having an open, low lying flat agricultural landscape. The fields to the north of the B3340 are partially screened from views by the existing field boundaries. The southern field is more open, and offers wider and more distant views to the south, therefore potential landscape impacts. A large number of protected trees adjoin the site on the eastern boundary. As there are distant views to the south and a number of protected trees adjoining the site overall a negative impact is considered.	-2	The appeal decision applies a condition for the submission of an arboricultural method statement and tree protection plan which will ensure the retention of existing trees in the interest of public amenity and the character and appearance of the area. Policy	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment a neutral effect is considered.	
B) Protection and promotion of a quality built and historic environment	This site occupies a substantial area where prehistoric activity is recorded in the wider landscape. The site is located opposite from the boundary of Bridwell Park, a nationally important grade I listed historic park and garden. However there is little intervisibility between the site and the nearest boundary point, there is an intervening parcel of land and there is screening by hedgebanks and trees along the boundaries of this intervening land, the Historic Environment Appraisal considers there to be no significant impact. An appeal was dismissed in 2007 in Uffculme on the basis that the woodland to the east of this site provides and important and attractive feature defining the end of the village and functioning as an appropriate settlement boundary. However in the more recent appeal decision in 2016. The inspector makes reference to the 2007 appeal decision and although does not disagree with the above observation states that the reference was made in a different context and for the proposal in question considered by this appraisal there	-1/?	The appeal decision applies a condition to secure a scheme of archaeological work with the aim of recording of any features of heritage interest. Overall with mitigation the site scores a neutral effect although the score remains uncertain given the impact on the prehistoric activity is unknown.	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	would be no material harm to the character or appearance of the area. A slight negative effect overall is considered given the potential impact on the area of prehistoric activity. Uncertainty is also considered as the impact on the prehistoric activity is unknown.			
C) Mitigating the effects of climate change	The site area includes some flood zone 2 and 3 with the majority of the site located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures, a negative effect overall. Uffculme has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered.	-1	The 2016 appeal decision notes that development can be confined to Flood Zone 1 and the Environment Agency does not object to the development. A condition is applied to require the details of materials, boundary treatments, finished floor levels, existing and proposed site levels and proposed road and footpath levels to be included within the reserved matters which will help address flood risk. A condition is also secured to ensure that a surface water drainage scheme is required for the Council's approval and this should be based on SUDs	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			principles and that dwellings are not occupied until sufficient capacity exists within the public sewerage network. With mitigation and the benefit of a bus service a slight positive effect is considered.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 and 4 agricultural land and is relatively small therefore an overall a slight negative impact.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 60 new dwellings with 35% affordable housing. A contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community	Uffculme is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	appropriate for a limited level of development, a neutral effect. The previous SA noted that the location of this site would result in long walking distances to village facilities, with particular reference to the site being 1 mile from the primary school which could restrict young children walking to school however in the 2016 appeal decision the inspector states that in his view the appeal site is within an acceptable and safe walking distance of the village services and facilities. As such overall a neutral effect is considered.			
I) Delivering the necessary infrastructure	Site access is achievable subject to any development requiring the extension of the 30 mph limit. The footway at Culm Valley Way would need to be extended to the site. The Mid Devon Community Infrastructure Evidence Report indicates that the primary school can accommodate additional pupils arising from this development without expansion. Given an adequate site access is achievable but the need for footways an overall slight negative effect is considered.	-1	In the interests of highway and pedestrian safety, the appeal decision in 2016 applies a condition to ensure that vehicular access and footway linking the site to the village is provided prior to occupation of the dwellings. Overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over-capacity issues in the local schools.

Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Uffculme. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing in Uffculme.

Additional Appraisals for Willand allocations

Alternative Option WI1: Land east of M5, extended area 14.8ha, 174 dwellings

Land with a gross site area of 14.8 (ha) at land east of M5, Willand is proposed for 174 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is generally flat in nature, and is well screened from views from the west into the site. The existing adjacent housing to the east is well screened by the high trees, and therefore any new developments would only represent an impact when viewed from the west. There is evidence of otters within one of the fields. The site adjoins two areas of deciduous woodland priority habitats, one in the north east and one in the south west. The site is surrounded by hedgerows which can be a haven for wildlife. Given the scale of development which may have an impact on the landscape but the proximity of the site to existing development and the M5 an overall negative impact is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation however given the scale of the site a slight negative effect is considered to remain.	-1

B) Protection and promotion of a quality built and historic environment	No anticipated impact on any known heritage assets, a neutral effect is considered.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. There is a 25-50% chance of groundwater emergence within the site boundary. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water runoff and flood risk and the potential for large scale impacts on groundwater, a negative effect is considered.	-2	A policy requirement in the Local Plan Review seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. Given the mitigation of surface water runoff and flood risk a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising	Development option is located on greenfield land. Approximately 7 ha of the site lies within grade 1 excellent quality agricultural land and 6.4 ha lies within grade 3 good / moderate agricultural land.	-2		-2

resource use	Overall a negative effect is considered as development of the site would result in the loss of grade 1 agricultural land.			
E) Promoting economic growth and employment	Option provides approximately 174 new dwellings. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact.	+1		+1
F) Supporting retail	This option proposes a large scale residential development within a village. The policy contains no retail proposals, a neutral effect.	0		0
G) Meeting housing needs	Option provides for 174 new dwellings with 30% affordable housing a contribution towards future housing need, a significant positive effect.	+3		+3
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The site is located within Cullompton catchment area and therefore has possible off-site air quality impact within Cullompton AQMA. There are also possible concerns regarding developing new housing in close proximity to the M5 whereby noise impact may negatively affect residential amenity. A Public Right of Way runs through the site. The scale of development may also impact community facilities therefore on balance a significant negative effect is considered overall.	-3	The policy should require the provision of a buffer zone and appropriate planting to mitigate noise from the adjacent motorway. It should also require the retention and enhancement of the Public Right of Way. DM4 'Pollution' also provides some mitigation. As the policy requires 'enhancement' of the public right of way which is a slight positive impact but the scale	0

			of development may affect community facilities on balance a neutral effect is considered.	
I) Delivering the necessary infrastructure	An adequate access is achievable and numbers would be dependent on Transport Assessment of the junction with Silver St. Given the scale of development the site may need to deliver a large amount of road infrastructure. The Mid Devon Community Infrastructure Evidence Report indicates that the primary school can accommodate additional pupils arising from this development without expansion. Overall a negative and uncertain effect is considered given the potential for impact on highways and the need for a transport assessment.	-2	Policy S8 provides some mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities. The policy requires a transport assessment of capacity at the junction of Silver Street and Meadow. As mitigation is dependent on the outcome of the transport assessment a neutral although uncertain effect is considered.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to overcapacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years),	Within the short term, construction traffic associated with the development will

Medium (6-15 years) Long (15+ years)	increase traffic within Willand. Once completed, the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Alternative Option WI2: Willand Industrial Estate full site area option

Land with a gross site area of 9.2 (ha) at Willand Industrial Estate, Willand is proposed for 22,000 sqm commercial floorspace.

Sustainability objective	**Commentary**	**Impact**	Mitigation	Post Mitigation
A) Protection of the natural environment	There are a number of protected trees in the site near the south eastern boundary. The site is hidden from the settlement by vegetation. The site area abuts the M5 and may be seen from the M5 if it is developed. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. Given the loss of protected trees and potential visual impact of the site, a negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment a neutral effect. As the site may be visible from the M5 is developed a slight negative effect is considered.	-1
B) Protection and promotion of a quality built and historic environment	Previous archaeological work undertaken on this site demonstrated the presence of prehistoric activity within this site, a slight negative and uncertain effect. The location of the site, on the edge of the settlement adjoining existing commercial development is considered a sustainable location for employment growth. On balance a neutral effect is considered although there is some	-1	Archaeological investigation and mitigation is required by this policy, which improves the impact score, although this remains uncertain as the impact will depend on the	+1/?

	uncertainty remaining due to the potential impact on the area of prehistoric activity within the site.		results of the investigation. As the site is on the edge of the settlement adjoining existing commercial development and is considered a sustainable location for employment growth a slight positive effect is considered.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan Review seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	The site is located on part greenfield and part brownfield land, a neutral effect.	0		0
E) Promoting economic growth and employment	Option provides 22,000 sqm of commercial floorspace helping to diversify the economy, provide opportunities for local employees, reduce out-commuting and encourage inward investment, a positive effect.	+3		+3

F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The allocation of commercial land within Willand could decrease air quality within the settlement through increased traffic movement and in particular HGV movements, a slight negative effect.	-1	DM4 Pollution provides mitigation, a neutral effect overall.	0
I) Delivering the necessary infrastructure	Much of the site infrastructure is already in place and there is existing access into the site which could be improved to cover the whole of the site, a neutral effect.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic congestion.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic congestion within Willand. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet the employment needs of Willand.

Alternative Option WI2: Willand Industrial Estate residential 2.2ha, 53 dwellings

Land with a gross site area of 2.2 (ha) at Willand Industrial Estate, Willand is proposed for 53 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are a number of protected trees in the site near the south eastern boundary. The site is hidden from the settlement by vegetation. The original site area abutted the M5 and may be seen from the M5 if it is developed. The site falls within the 'Lowland Plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. Given the loss of protected trees and potential visual impact of the site, a negative effect is considered.	-2	The site area has been redrawn to only include the south east section and therefore the visual impact of the development to be seen from the M5 has been minimised. Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment, overall a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	Previous archaeological work undertaken on this site demonstrated the presence of prehistoric activity within the site. The location of the site, on the edge of the settlement adjoining existing commercial development is considered a sustainable location for employment growth and subsequently, this is an unsuitable location for housing, being surrounded on three sides	-3/?	Archaeological investigation and mitigation should be required by this policy, which improves the impact score, although this remains uncertain as the impact will	-2/?

	by existing and forthcoming employment development. Overall the combined potential effect on the area of prehistoric activity within the site and the negative effect of the site being an unsuitable location for housing would lead to a significant negative and uncertain effect.		depend on the results of the investigation. However, as the site is an unsuitable location for housing, being surrounded on three sides by existing and forthcoming employment development, a negative and uncertain effect remains.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water runoff without appropriate mitigation measures, a slight negative effect. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water runoff but the benefit of a bus service on balance, a neutral effect is considered.	0	A policy requirement in the Local Plan Review seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Given the mitigation of surface water runoff a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	The site is located on part greenfield and part brownfield land, a neutral effect.	0		0
E) Promoting economic growth and	Option does not result in the loss or gain of employment land. A neutral effect.	0		0

employment				
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for approximately 53 dwellings, a contribution towards future housing needs, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The allocation of housing land in Willand could decrease air quality within the settlement through increased traffic movement. The site is unsuitable for housing development as it is surrounded on three sides by existing and forthcoming employment development which would result in a negative impact on community cohesion and living environment. This would result in a combined significant negative effect.	-3	Policy DM4 'Pollution' in the Local Plan Review provides mitigation, however the location of the development cannot be mitigated as such a negative effect remains.	--2
I) Delivering the necessary infrastructure	Much of the site infrastructure is already in place and there is existing access into the site which could be improved to cover the whole of the site, a neutral effect. There is existing capacity in the local schools to accommodate development from this individual site. Overall a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site have the potential to impact upon traffic congestion.

Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic in Willand. Once completed, the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Annex 4 – Revised Sustainability Appraisal of Plan

The development of the Local Plan Review has been an on-going and iterative process with key pieces of evidence influencing the selection and rejection of options. Through the Local Plan Review Proposed Submission Consultation (2015) a number of alternatives were proposed, along with the presentation of new information. As a result a number of modifications to the proposed policies and supporting text of the plan are proposed. The full details of these proposed alternatives and new information are provided in annex 2 and 3. Annex 2 also sets out the reasons for selecting/rejecting the alternatives proposed. This annex summarises the main changes to the Local Plan Review following the appraisal of alternatives set out in annex 2, and assesses the overall sustainability of the Local Plan Review.

Strategic Policies

Policy S2: Amount and Distribution of development

An alternative to amend the dwelling target to 7,860 to meet the objectively assessed housing need (OAN) with the additional housing requirements of Junction 27 is preferred due to new information presented in the finalised Strategic Housing Market Area report which became available during the consultation on the Local Plan Review Proposed Submission (2015) and following the Council decision on 22nd September 2016 to propose to allocate land at Junction 27 for a strategic scale employment site. Similarly the higher commercial growth scenario including the Junction 27 option is proposed as a modification to the plan.

Policy S3: Meeting housing needs

Updates to the policy are proposed given the change to the OAN suggested in policy S2.

Policy S4: Ensuring housing delivery

Updates to the policy are proposed given the change to the OAN suggested in policy S2.

Policy S5: Public open space

A change to the wording is proposed to clarify that the policy refers to the parish boundaries of the settlements noted.

Policy S12: Crediton

An additional criterion is proposed in the policy which is as follows ‘community and education facilities and other infrastructure to support the development proposed’ to reflect the need for a new primary school in Crediton.

Policy S14: Countryside

The removal of reference to the provision of gypsy and traveller accommodation in this policy is proposed to ensure the Plan is in conformity with national policy in which the 'Planning Policy for Traveller Sites' (2015) which requires that new sites for travellers should be very strictly limited in open countryside that is away from existing settlements or outside areas allocated in the development plan.

Site Allocations

Tiverton

TIV1-TIV5 Eastern Urban Extension

The policy is proposed to be amended to consider a housing range of 1580-1830 which reflects the permissions granted on area A and the potential for increased density in area B.

TIV14 Wynnards Mead

The policy is proposed to be deleted to reflect new information regarding the historic environment and flood risk.

OTIV4 Blundells School (Proposed for allocation TIV16)

This site is proposed to be allocated following the Council decision on the 22nd September to allocate land at Blundells School for residential development. New information provided includes the support of developing the site from the Environment Agency which has resulted in this proposed policy scoring more positively than the option considered in the Local Plan Review Proposed Submission consultation (2015).

Cullompton

CU1-CU6 North West Cullompton

Contributions from development to the Town Centre relief road and Junction 28 are proposed as modifications to the policy. In-line with the adopted North West Cullompton masterplan a change to the total commercial floorspace is proposed. The re-allocation of land to the south west of the site is also proposed.

CU7-CU12 East Cullompton

An additional criterion is proposed to ensure the setting of listed buildings adjoining the site is respected.

CU19 Town Centre Relief Road

Two additional criteria are proposed to ensure the protection of the setting of listed buildings and conservation area, and the provision of archaeological investigation and mitigation.

CU20 Cullompton Infrastructure

An additional criterion to state 'provision of works to reduce flood risk' has proposed as a modification to the plan.

Crediton

CRE2 Red Hill Cross, Exhibition Road

Additional supporting text is proposed to reflect the recommendation in the HEA to provide appropriate mitigation for Shobrooke Park to the east.

CRE3 Cromwells Meadow

Additional supporting text is proposed to reflect the recommendation in the HEA to provide appropriate mitigation for Shobrooke Park to the east. An additional criterion is also proposed to ensure archaeological investigation and mitigation.

CRE4 Woods Group

Additional supporting text is recommended which identifies non-listed heritages within the site.

CRE5 Pedlerspool

Amendment to the policy is made which includes the provision of a new school but removes the extra care scheme element in the policy.

CRE7 Stonewall Lane

A change to the supporting text of the Plan is recommended to ensure that adequate landscaping is provided to protect the heritage assets associated with the adjoining Creedy Park.

CRE10 Land south of A377

A change to the policy is proposed to include a small area to the south of the allocation up to the edge of the swale, covered by recent consent sought by Mole Avon. Although the scoring is lower for the pre-mitigation score of objective c) mitigating the effects of climate change, it is considered appropriate and reasonable to allocate the original site area which has outline consent. Detailed design to mitigate flood risk will be considered at the reserved matters planning application stage. Mitigation through sensitive design with appropriate

choice of materials and landscaping is also recommended for inclusion within the policy. An amendment to the supporting text is further proposed to make reference to the latest flood data and implications from redevelopment with mitigation measures such as layout, site and flood levels.

CRE11 Crediton Infrastructure

The following criterion is proposed for inclusion 'provision of works to reduce flood risk'.

Junction 27

Junction 27, M5 Motorway

An additional policy is proposed to reflect the Council decision on 22nd September 2016 to allocate land for tourism, leisure and retail at Junction 27 of the M5 motorway. Changes to the policy are reflected in the sustainability appraisal.

Rural Areas

School Close, Bampton

An allocation for 0.54(ha) 26 dwellings is proposed as a modification to the Plan. The site is currently allocated and was omitted in error as some of the site has been built out. For consistency, similar to other sites in the plan, the remaining area of the allocation which has not yet been built is proposed to remain as an allocation in the Plan.

CH1 Barton, Chawleigh

An additional criterion to state 'design solutions which respects the setting of the conservation area and listed building' is proposed. An amendment to the supporting text is also proposed to ensure appropriate landscaping to mitigate any potential impact on the conservation area and listed buildings.

CF1 Barnshill Close, Cheriton Fitzpaine

An additional criterion to minimise the impact on the conservation area and listed building is proposed.

HA1 Land adjacent Fishers Way, Halberton

An amendment to policy HA1 is proposed to delete reference to the need to 'archaeological investigations and appropriate mitigation measures' given the new information provided by the Devon County Council Archaeology Team that the proposed allocation will not impact on any known heritage assets and state that they would not need to be consulted should an application come forward. The addition of a criterion to ensure mitigation through

appropriate design, materials and landscaping is proposed to protect the setting of Halberton conservation area is also proposed.

HE1 Depot, Hemyock

This site is proposed for deletion given the representations made during the Local Plan Review Proposed Submission (2015) consultation raises an issue with the deliverability of the site during the plan period and is therefore no longer considered a reasonable alternative. The site will have a limited impact on the Local Plan as a whole given its size of 10 dwellings and may still come forward as a windfall site as it falls within the settlement limit.

NE1 Court Orchard, Newton St Cyres

A change to the policy and supporting text is proposed to ensure design which respects the setting of the conservation area.

OSP1 Higher Town, Sampford Peverell (Proposed for allocation SP2)

This site is proposed to be allocated following the Council decision on the 22nd September to allocate land at Higher Town for residential development. Since the proposed submission SA there has been confirmation that access is achievable and therefore the uncertainty has been removed.

OUF3 Land west of Uffculme (Proposed for allocation UF1)

A change to the plan is proposed to allocate this site given a 2016 appeal decision (APP/Y1138/W/15/3025120) allowing outline planning permission for a site of 3.49ha with 60 dwellings. Conclusions in the inspectors report have fed into the sustainability appraisal in which objectives b) built and historic environment and h) ensuring community health and wellbeing score more positively.

WI2 Willand Industrial Estate

The full allocation of 9.2ha, 22,000sqm of commercial floorspace is proposed to be allocated given that the Council's original reasons for not allocating the full site have been addressed as the remainder of the site is now deliverable.

Managing Development

DM28 Other protected sites

The inclusion of reference to compensatory measures is proposed as a change to the policy to raise that in some cases where mitigation measures are not possible then compensatory measures may be appropriate.

Secondary/Cumulative/Synergistic impacts

Tiverton

Additional detail has been provided in the supporting text of S10 to reflect the cumulative traffic impacts on Junction 27 to be considered.

Cullompton

Additional criterion and supporting text has been included under a number of Cullompton allocation policies to reflect the cumulative impact on the road network.

Crediton

Additional text is provided in CRE7 is recognise the need for a Transport Assessment that will comprehensively assess the transport issues related to the development of the site, taking into account the potential cumulative impact of nearby allocations.

J27 Commercial Development

Additional evidence since the previous SA was commissioned specifically to examine the potential related housing implications of the proposed strategic scale employment site at Junction 27 on the M5 motorway. The results suggest a need of an additional 260 dwellings within Mid Devon District Council over the plan period. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.

Overall Sustainability of the Local Plan Review

In this latest update to the SA, changes to the Plan are proposed to take into account comments from representations, additional reasonable alternatives considered and new information presented including the latest national policy changes. Updates from the latest appeal decisions and planning applications have also been taken to account to ensure policies proposed are as up-to-date as possible.

Of the changes, the majority propose minor alterations to the proposed policies or supporting text. The main amendments to the Plan include the proposed allocation of land at Junction 27 of the M5 motorway and associated housing and an amended housing total to reflect the most recent evidence on the housing needs in the area. OSP1, Sampford Peverell (proposed as SP4 within the plan) and OTIV4, Blundells School (proposed as TIV16 within the plan) are proposed for allocation in response to the housing implications of allocating the strategic scale employment site at Junction 27 of the M5 motorway. The option to include Junction 27 presents a significant positive impact on promoting economic

growth and employment. Controls are set in policy to ensure aspects such as retail development is supported, necessary infrastructure is delivered and housing need is met. As such overall it is considered to result in a positive impact on the plan.

Wynnards Mead, Tiverton (contingency site) is proposed for deletion due to new evidence provided in relation to issues around flooding and the historic environment. School Close, Bampton (proposed as BA4 within the plan) has been included, which was previously omitted in error. HE1 Deport, Hemyock is proposed for deletion due to an issue of its deliverability within the plan period. OUF3 Land West of Uffculme is also included as an allocation following a 2016 appeal decision (APP/Y1138/W/15/3025120), allowing outline planning permission for a site of 3.49ha with 60 dwellings. Also the full allocation of 9.2ha, 22,000sqm of commercial floorspace is proposed at Willand Industrial Estate given that the Council's original reasons for not allocating the full site have been addressed as the remainder of the site is now deliverable.

In general, the emerging Local Plan Review has been found to have a wide range of positive and significant positive effects on the objectives both cumulatively and through individual policies, although a number of potentially adverse impacts still remain. Recommendations made in previous iterations of the SA report and this updated SA report as well as controls through policy has provided mitigation for potential adverse effects. Of the main changes proposed in this iteration of the SA, the main negative impact on the Local Plan Review as a whole is the deletion of a contingency site (Wynnards Mead, Tiverton). The deletion of this policy reduces the flexibility of the Plan as a whole given the role of contingency sites in ensuring housing delivery during the Plan period. However on balance the sustainability issues of the site outweigh the benefit of the inclusion of the contingency site. Two other contingency sites in the plan remain and therefore flexibility still remains in the Plan. The other changes to the Plan are considered largely beneficial with the new information and therefore amount to an overall positive effect.

Appendix 6.10

Local Plan Review: Proposed Submission Consultation

(incorporating proposed modifications)

Sustainability Appraisal Update (incorporating consultant LUC recommendations)

January ~~2017~~2018

Sustainability Appraisal Update

1. Mid Devon District Council commissioned consultants LUC to undertake an independent review of the Sustainability Appraisal Update (2017) – herein referred to as SA Update (2017) that was prepared by Mid Devon District Council in relation to proposed modifications to the Local Plan Review. The recommendations from LUC have been applied in this Sustainability Appraisal Update. For a full account of the LUC review and MDDC responses please refer to the 'Review of Sustainability Appraisal Update for the Mid Devon Local Plan Review: Review of Legal Compliance (January 2018)' and 'Mid Devon District Council response to the Review of Sustainability Appraisal Update for the Mid Devon Local Plan Review: Review of Legal Compliance (January 2018)'.

2. The~~is~~ 2017 update to the Sustainability Appraisal ~~has been~~was undertaken to take into account comments made at the 2015 Proposed Submission Stage consultation and proposed modifications to the Local Plan Review. The Local Plan Review: Proposed Submission Consultation Sustainability Appraisal (2015) and SA Update (2017) ~~is~~are available on the website at www.middevon.gov.uk/localplanreview and the main Council office, Phoenix House, Tiverton.

3. Consultation feedback from the 2015 consultation included general comments on the SA as well as specific issues related to individual policies. Responses to general comments relating to contents of the SA text, methodology and cumulative impacts are set out in Annex 1. Proposals for alternative policy options, including proposed modifications, are assessed alongside new information and comments on the scoring of the 2015 SA in Annex 2. Only proposed alternatives deemed 'reasonable alternatives' are considered as part of the SA update; for example, this excludes alternatives considered in previous iterations of the SA and where only minor amendments are proposed. A summarised re-assessment is included in Annex 2. Where there are distinct alternatives proposed, significant new information or substantial changes to the SA scoring a full appraisal is included in Annex 3, with amended SA scoring where applicable. The main body of this SA Update is accompanied by the following three annexes:

Annex 1 – Sustainability Appraisal text, methodology and cumulative impact comments (p.67-80)

This annex sets out comments from the Local Plan Review Proposed Submission Consultation (2015) on the contents of the sustainability appraisal (SA) text, methodology and cumulative impacts.

Annex 2 – Further reasonable alternatives, new information and comments on the sustainability appraisal of policies and sites (p.81-222)

This annex provides a summary of additional reasonable alternatives considered and proposed changes to the sustainability appraisal for example through new information. Minor proposed changes to the Local Plan have not been assessed as these were deemed to not give rise to significant effects.

Annex 3 – Additional Reasonable Alternative Appraisals (p.223-395)

This annex provides the full appraisals used to assess reasonable alternatives where deemed necessary as summarised in Annex 2.

Summary of Sustainability Appraisal work carried out in Sustainability Appraisal Update (2017)

4. Arising from the SA Update (2017), a number of alternatives were identified through comments on the Local Plan Review Proposed Submission Consultation (2015) or new information. A number of modifications were also proposed through the SA Update. For a full account of proposed modifications to the Local Plan Review, including minor amendments not considered to give rise to reasonable alternatives, reference should be made to the Schedule of proposed modifications published in November (2016). This provides a list of proposed modifications following in the Local Plan Review Proposed Submission (incorporating proposed modifications). The schedule of proposed modifications published in March (2017) provides a list of proposed modifications following the 2017 consultation on the Local Plan Review Proposed Submission (incorporating proposed modifications). These documents are available on the Council's website (see paragraph 2 above). A number of comments were received at each stage of the Local Plan Review process; all representations received are available to view in full on the Mid Devon District Council website (as before). Furthermore a summary of representations received is provided for each stage of the Local Plan Review process. The 2015 and 2017 Local Plan Review Proposed Submission (February 2015) Consultation Summary Documents set out responses from Mid Devon District Council to each comment received.

5. The following table sets out a summary of the reasons why additional SA work was carried out in the SA Update (2017):

Summary of reasonable alternatives considered

6. The following table sets out the reasonable alternatives considered through the 2017 SA update.

Table 2: Summary of reasonable alternatives considered through the 2017 SA update

Local Plan Policy	***Summary of Reasonable Alternative Options considered by SA update (2017)***
Strategic Policies	
S2: Amount and distribution of	- *Amount of housing*: six alternative options for total

development	housing numbers were considered in range 7200 – 8800 over plan period, including the Council's preferred option of 7860. - *Distribution of housing:* rural distribution, Tiverton and Crediton focussed alternatives were considered. - *Amount of commercial development:* higher growth scenario including J27 option.
S3: Meeting housing needs	- 35% affordable housing target. - Remove the requirement to provide 5% of serviced plots for self-build. - Alternatives for the distribution of gypsy and traveller pitches: town focussed urban extensions and rural distribution.
S4: Ensuring housing delivery	- Delete the policy.
S5: Public open space	- Sustainable Urban Drainage Systems (SUDs) to be considered as public open space. - The provision of open space should be applied to towns rather than parishes.
S6: Employment	- Small scale allocations in rural locations. - Allocation for major tourism and leisure.
S13: Villages	- Edge of village development.
Site Allocations	
TIV1-5: Eastern Urban Extension	- Range of dwellings (1580 – 1830)
TIV12: Phoenix Lane	- Delete policy.
TIV13: Tidcombe Hall	- Delete policy. - 8.4ha with 200 dwellings.
TIV14: Wynnards Mead (Contingency site)	- Delete policy.
OTIV2: Hartnoll Farm	- 1000 dwellings and 20,000sqm employment.
OTIV4: Blundells School (proposed for	- Reconsider site in light of EA and HEA evidence: allocate

allocation TIV16)	for 200 dwellings.
OTIVNEW: New site at Seven Crosses Hill	- 7.69ha for 184 dwellings.
CU1-CU6: North West Cullompton	- Include education provision as part of the commercial floorspace allocation. - Extend site area, incorporating all 'Growen Farm' land.
CU7-CU12: East Cullompton	- No quantum of green infrastructure and public open space should be specified. - Proposed land swap; 'land at Newland Persey' replaced by 'land at Cooke'. - Land at Aller Barton Farm/ south of Honiton Road, 181ha site.
CU15: Land at Exeter Road	- Reduce allocation to 24 dwellings.
CU17: Week Farm	- Include space for larger retail outlets.
CU18: Venn Farm	- Extend allocation area to 8ha.
CU21: Land at Colebrook (Contingency Site)	- Include full site area proposed at options stage: 19.3ha, 400 dwellings.
OCUNEW: Tiverton Road	- New site proposed for up to 19 dwellings.
CRE6: Sports fields, Exhibition Road	- Alternative to proposed allocation: 2.8ha with 50 dwellings.
CRE10: Land south of A377	- Extension of settlement limit to include all land within 2009 planning permission.
CRE11: Crediton Infrastructure	- Include provision of works to reduce flood risk in policy.
J27: Land at Junction 27	- Proposed allocation of 71 hectares between M5 Junction 27 and Willand for mixed commercial floorspace including a travel hub, agronomy visitor centre, outdoor adventure zone and outlet shopping village.
School Close, Bampton (proposed for allocation BA4)	- Allocate 0.54ha site for 26 dwellings (site omitted in error from 2015 proposed submission)
OCFNEW: Bramble Orchard, Cheriton Fitzpaine	- New alternative site proposed in preference to current plan allocations.

OHANEW: The Pethers	- Site put forward in preference to HA1.
ONENEW: New Estate Site A and B, Newton St Cyres	- New site options (A &B) at Newton St Cyres
OSP1: Higher Town, Sampford Peverell (proposed for allocation SP2)	- Option site reconsidered; proposed allocation of 6ha, 60 dwellings site.
TH1: South of Broadlands, Thorverton	- Proposed extension of site to include allotment land; 1.15 ha, 20 dwellings
OTHNEW: Land north east of Silver Street, Thorverton	- New land submitted for consideration.
OTHNEW: Land to the west of Lynch Close and Cleaves Close, Thorverton	- New land submitted for consideration.
OUF3: Land west of Uffculme, Uffculme	- 3.5 ha, 60 dwelling site considered for inclusion in plan following appeal decision (February 2016) granting outline planning permission.
WI1: Land east of M5, Willand	- Increase area of proposed allocation; 14.8ha, 174 dwellings
WI2: Willand Industrial Estate, Willand	- Full allocation of 9.2ha 22,000sqm of commercial floorspace - Allocate for residential development; 53 dwellings
Development Management Policies	
DM28: Other protected sites	- Include compensatory measures as part of policy

Summary of Proposed Modifications

7. The following table sets out the proposed modifications that have arisen through the 2017 SA update.

Table 3: Summary of proposed modifications set out in the 2017 SA update

Local Plan Policy	***Summary of Proposed Amendments***
Strategic Policies	
S2: Amount and distribution of development	Total housing need over plan period increased to 7860 to meet revised need. Amount of commercial development: higher growth scenario to include Junction 27 allocation.

S3: Meeting housing needs	Increase objectively assessed housing need to 380 per year to reflect SHMA evidence + 260 over plan period for Junction 27 allocation.
S4: Ensuring housing delivery	Increase objectively assessed housing need (as above).
S12: Crediton	Additional criterion for community and education facilities.
S14: Countryside	Remove reference to new traveller sites in open countryside (in response to updated National Policy guidance).
Site Allocations	
TIV1-5: Eastern Urban Extension	Amend policy to give range of dwellings (1580 – 1830).
TIV14: Wynnards Mead (Contingency site)	Proposed for deletion.
OTIV4: Blundells School (proposed for allocation TIV16 Blundells School)	New Policy: New site allocation to meet need arising from J27 employment; reconsidered in light of new Environment Agency (EA) & Historic Environment Appraisal (HEA) evidence.
CU1-CU6: North West Cullompton	Contribution from development towards Town Centre Relief Road/Junction 28 and change in commercial floorspace in line with masterplan. Re-allocation of land to south west of site.
CU7-CU12: East Cullompton	Additional criterion and text in response to HEA.
CU15: Exeter Road	Reduced allocation to 24 dwellings.
CU19: Town Centre Relief Road	Additional criterion and text in response to HEA.
CU20: Cullompton Infrastructure	Additional criterion and text on works to reduce flood risk.
CRE2: Red Hill Cross	Additional supporting text to add context in response to HEA.
CRE3: Cromwells Meadow	Additional criterion and text in response to HEA.
CRE4: Woods Group, Exeter Road	Additional supporting text to add context in response to HEA.
CRE5: Pedlerspool	New primary school included in policy following representation from Devon County Council.

CRE7: Stonewall Lane	Additional supporting text to add context in response to HEA.
CRE10: Land south of A377	Extension of settlement limit to include all land included in 2009 Planning Permission. Amendments to supporting text have been made in response to the HEA and latest flood risk information.
CRE11: Crediton Infrastructure	Amend policy to include provision of works to reduce flood risk
J27: Land at Junction 27	New policy: Proposed allocation of 71 ha between M5 Junction 27 and Willand for mixed commercial floorspace, including a travel hub, agronomy visitor centre, outdoor adventure zone and outlet shopping village.
School Close, Bampton (proposed for allocation BA4)	New Policy: 0.54 ha site, 26 dwellings. Site omitted in error from 2015 proposed submission, now included and fully appraised as part of SA.
CH1: Barton, Chawleigh	Additional criterion and text in response to HEA.
CF1: Barnshill Close, Cheriton Fitzpaine	Additional text proposed in response to HEA.
HA1: Land Adjacent Fishers Way, Halberton	Delete reference to archaeological investigation/mitigation following new information from Devon County Archaeology service.
HE1: Depot, Hemyock	Site now won't be available in near future: removed from plan as no longer reasonable alternative.
NE1: Court Orchard, Newton St Cyres	Additional criterion and text in response to HEA.
OSP1: Higher Town, Sampford Peverell (proposed for allocation SP2)	New Policy: 6 ha, 60 dwelling site included in options consultation and 2015 SA; re-considered to meet increased housing need due to J27 employment opportunities, now included as proposed modification.
OUF3: Land west of Uffculme, Uffculme	3.5 ha, 60 dwelling site included as proposed modification following appeal decision February 2016 granting outline planning permission.
WI2: Willand Industrial Estate, Willand	Proposed to allocate full site area; 9.2 ha site for 22,000 square metres commercial floorspace.
Development Management Policies	

DM28: Other protected sites	In response to Environment Agency comments, proposed policy amendment allows for consideration of compensatory measures where mitigation measures are not possible.

Compliance with the Strategic Environmental Assessment Directive and Regulations

8. The Council has a duty to consider the sustainability of its plans through the Planning and Compulsory Purchase Act 2004 (as amended). It also has to prepare a Strategic Environmental Appraisal (SEA) as a result of requirements contained in the Environmental Assessment of Plans and Programmes Regulations 2004. It is believed that the requirements of both pieces of legislation have been met by the Sustainability Appraisal (SA), which has been prepared following Government guidance.

9. The SA is an iterative, ongoing process and integral to plan making. During the process of preparing the Local Plan Review, consultation was held in July 2013 on the Scoping Report and SA Scoping Report, in January 2014 on the Options Report and SA Interim Report, in February 2015 on the Proposed Submission document and the SA Proposed Submission Report and in January 2017 on the Proposed Submission (incorporating proposed modifications) document and the SA Update Report.

10. The interim SA (2014) provided a signposting table in Chapter 1 which set out how the SEA Directive and Regulations requirements were met at the time of publishing the 2014 report. The Sustainability Appraisal Proposed Submission Report (2015) provided an updated signposting table in Chapter 1 which set out how the SEA Directive and Regulations requirements had been met at the time of publishing the 2015 report which included compliance with any items not covered by previous iterations of the SA.

11. A further signposting table has been provided in this SA Update. For clarity the inclusion of each stage of the SA process is provided where compliance with the SEA Directive requirement has been met.

Table 4 – Signposting table, 'Information to be included in the Environmental Report'

SEA Directive Requirements	Covered in SA
Information to be included in the Environmental Report – Article 5 and Annex 1 of SEA Directive	
a) an outline of the contents, main objectives of the plan, and relationship with other relevant plans	**Sustainability Appraisal Scoping Report (2013):** 'Chapter 1 Introduction' of this report sets out the contents

SEA Directive Requirements	Covered in SA
and programmes;	and main objectives of the plan. 'Chapter 2 Relevant plans and programmes' of this report sets out the relationship with other relevant plans and programmes. 'Chapter 7 Appendix: Reviewed plans and programmes (full list)' provides a full list of reviewed plans and programmes. **Interim Sustainability Appraisal (2014):** 'Chapter 1 Background' of this report sets out an outline of the contents and main objectives of the Local Plan. This chapter also identifies the compliance of report at the time of publication with the SEA Directive and Regulations. 'Chapter 2 Sustainability Context'. This chapter sets out the conclusions from the review of relevant plans and programmes. 'Appendix 1: Full review of plans and programmes'. This appendix provides a full review of plans and programmes. **Sustainability Appraisal Proposed Submission Report (2015):** 'Chapter 1 Background' of this report sets out the contents and main objectives of the Local plan. This chapter also identifies the compliance of the report at the time of publication with the SEA Directive and Regulations. 'Chapter 2 Sustainability Context'. This chapter sets out the conclusions from the review of relevant plans and programmes. 'Appendix 1: Full review of plans and programmes'. This appendix provides a full review of plans and programmes.
b) the relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan;	**Sustainability Appraisal Scoping Report (2013):** 'Chapter 3 Baseline information about Mid Devon' of this report considers the relevant aspects of the current state of the environment and considers trends that are likely to continue without the implementation of the plan e.g. likely historic trends of biodiversity expected to continue and the trend for the delivery of sustainable homes based on

SEA Directive Requirements	Covered in SA
	existing relevant plans and programmes. **Interim Sustainability Appraisal (2014):** 'Chapter 2 Sustainability Context' looks at the relevant aspects of the state of the environment and considers trends that are likely to continue without the implementation of the plan. **Sustainability Appraisal Proposed Modifications Report (2015):** 'Chapter 2 Sustainability Context' looks at the relevant aspects of the state of the environment and considers trends that are likely to continue without the implementation of the plan. The likely Evolution of the State of the Environment without Implementation of the Local Plan Review is set out in full at para 2.60 and accompanying table.
c) the environmental characteristics of areas likely to be significantly affected;	**Sustainability Appraisal Scoping Report (2013):** 'Chapter 2 Relevant plans and programmes' of this report sets out the relationship with other relevant plans and programmes which have been grouped into themed areas. This first picks up on the potential impact of the Plan, in particular how the promotion of new development may impact on these themes. 'Chapter 3 Baseline information about Mid Devon' of this report considers the relevant aspects of the current state of the environment, it provides some identification of existing environmental characteristics that could be affected by the Plan e.g. Natural England has advised that any development that encourages through-traffic through the A361 may impact on the Culm Grasslands SAC. 'Chapter 4 Sustainability issues and problems' of this report summarises the sustainability issues within Mid Devon identified by the Sustainability Appraisal scoping report. 'Chapter 7 Appendix: Reviewed plans and programmes (full list)' provides a full list of reviewed plans and programmes and provides greater detail on environmental characteristics likely to be affected and therefore which

SEA Directive Requirements	Covered in SA
	should be considered as part of the Local Plan Review. **Interim Sustainability Appraisal (2014):** 'Chapter 2 Sustainability context' looks at the relevant aspects of the state of the environment including the consideration of environmental characteristics of areas likely to be significantly affected. 'Appendix 1: Full review of plans and programmes' provides a full list of reviewed plans and programmes and provides greater detail on environmental characteristics likely to be affected and therefore which should be considered as part of the Local Plan Review. **Sustainability Appraisal Proposed Submission Report (2015):** 'Chapter 2 Sustainability context' looks at the relevant aspects of the state of the environment including the consideration of environmental characteristics of areas likely to be significantly affected. 'Appendix 1: Full review of plans and programmes' provides a full list of reviewed plans and programmes and provides greater detail on environmental characteristics likely to be affected and therefore which should be considered as part of the Local Plan Review. **Sustainability Appraisal Update (2017)** The SA Update (2017) is an addendum to the SA work undertaken to date. As such the context and methodology previously set out in the SA still applies. The SA framework objectives borne out of previous iterations of the SA are repeated in the SA Update for clarity.
d) any existing environmental problems which are relevant to the plan including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC;	**Sustainability Appraisal Scoping Report (2013):** 'Chapter 3 Baseline information about Mid Devon' of this report considers the relevant aspects of the current state of the environment, it provides some identification of existing environmental problems which are relevant to the plan including advice from Natural England on the impact of through-traffic on the A361 on the Culm Grasslands SAC.

SEA Directive Requirements	Covered in SA
	Interim Sustainability Appraisal (2014): 'Chapter 2 Sustainability Context' looks at the relevant aspects of the state of the environment it provides some identification of existing environmental problems which are relevant to the plan including advice from Natural England on the impact of through-traffic on the A361 on the Culm Grasslands SAC. **Sustainability Appraisal Proposed Submission Report (2015):** 'Chapter 2 Sustainability Context' looks at the relevant aspects of the state of the environment it provides some identification of existing environmental problems which are relevant to the plan including advice from Natural England on the impact of through-traffic on the A361 on the Culm Grasslands SAC.
e) the environmental protection objectives, established at international, Community or national level, which are relevant to the plan and the way those objectives and any environmental considerations have been taken into account during its preparation;	**Sustainability Appraisal Scoping Report (2013):** 'Chapter 2 Relevant plans and programmes' of this report sets out the relationship with other relevant plans and programmes which have been grouped into themed areas. This chapter identifies factors and policy defined by EU or UK legislation, national policies and other plans and strategies at a local level which are relevant to the plan, including environmental considerations to be taken into account during the Plan preparation. 'Chapter 7 Appendix: Reviewed plans and programmes (full list)' provides a full list of reviewed plans and programmes which is summarised in Chapter 2. The chapter provides sustainability conclusions under each theme which include environmental considerations to be taken into account in the Plan's preparation. **Interim Sustainability Appraisal (2014):** 'Chapter 2 Sustainability Context' of this report sets out the relationship with other relevant plans and programmes which have been grouped into themed areas. This chapter identifies factors and policy defined by EU or UK legislation, national policies and other plans and strategies at a local level which are relevant to the plan, including

SEA Directive Requirements	Covered in SA
	environmental considerations to be taken into account during the Plan preparation. 'Appendix 1 Full review of plans and programmes' provides the full list of reviewed plans and programmes which is summarised in Chapter 2. The chapter provides sustainability conclusions under each theme which include environmental considerations to be taken into account in the Plan's preparation. **Sustainability Appraisal Proposed Submission Report (2015):** 'Chapter 2 Sustainability Context' of this report sets out the relationship with other relevant plans and programmes which have been grouped into themed areas. This chapter identifies factors and policy defined by EU or UK legislation, national policies and other plans and strategies at a local level which are relevant to the plan, including environmental considerations to be taken into account during the Plan preparation. 'Appendix 1 Full review of plans and programmes' provides the full list of reviewed plans and programmes which is summarised in Chapter 2. The chapter provides sustainability conclusions under each theme which include environmental considerations to be taken into account in the Plan's preparation.
f) the likely significant effects on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors (these effects should include secondary, cumulative, synergistic, short, medium and long-term, permanent and temporary, positive and negative impacts);	**Interim Sustainability Appraisal (2014):** 'Appendix 2 Sustainability appraisal of policies and site options' presents the findings of appraisal work that has been carried out. The effects are illustrated using matrices and scoring system set out in 'Chapter 3 Sustainability appraisal methodology'. The likely significant positive and negative effects are shown by applying the scores +3 and -3 respectively. The SA objectives used throughout the SA process address all the required SEA topics. Appendix 2 also includes secondary, cumulative, synergistic, short, medium and long-term, permanent and temporary impacts. **Sustainability Appraisal Proposed Submission Report (2015):**

SEA Directive Requirements	Covered in SA
	'Appendix 2 Sustainability appraisal of policies and site options' presents the findings of appraisal work that has been carried out. The effects are illustrated using matrices and scoring system set out in 'Chapter 3 Sustainability appraisal methodology'. The likely significant positive and negative effects are shown by applying the scores +3 and -3 respectively. The SA objectives used throughout the SA process address all the required SEA topics. Appendix 2 also includes secondary, cumulative, synergistic, short, medium and long-term, permanent and temporary impacts. **Sustainability Appraisal Update (2017)** Annex 1 'Sustainability Appraisal text, methodology and cumulative impact comments' updates the cumulative effects noted in appendix 2 of the Sustainability Appraisal Proposed Submission Report (2015) Annexes 2 and 3 in the SA Update present the findings of the additional appraisal work that has been carried out. Effects are illustrated using the same matrices and scoring system that was used earlier in the SA process and that is described in paragraphs 2-9 of the SA Update (2017). As described in paragraph 6, likely significant positive and significant negative effects are shown by applying the scores +3 and -3 respectively. The SA objectives used throughout the SA process address all of the required SEA topics. Annex 4 in the SA Update (2017) summarises the updated cumulative sustainability effects of the Local Plan review as a whole, taking into account the changes proposed to the Plan.
g) the measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan;	**Interim Sustainability Appraisal (2014):** 'Appendix 2 Sustainability appraisal of policies and site options' presents the findings of appraisal work that has been carried out. Under each appraisal a summary of recommendations are made to prevent, reduce or as fully as possible offset any significant adverse effects on the environment of implementing the plan. **Sustainability Appraisal Proposed Submission Report**

SEA Directive Requirements	Covered in SA
	(2015): 'Appendix 2 Sustainability appraisal of policies and site options' presents the findings of the appraisal work that has been carried out. This updated version of the SA introduces a column considering potential mitigation measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan. The revised scores in the final column of the SA matrices illustrate how the proposed mitigation would affect the SA scores. In a number of places this results in potential significant effects being reduced. **Sustainability Appraisal Update (2017)** Annex 2 considers further reasonable alternatives, new information and comments on the sustainability appraisal of policies and site. Where appropriate measures are recommended as 'Changes to the Plan' to prevent, reduce and as fully possible offset any significant adverse effects on the environment of implementing the plan. The detailed SA matrices in Annex 3 include a column considering potential mitigation measures, and the revised scores in the final column of the SA matrices illustrate how the proposed mitigation would affect the SA scores. In a number of places this results in potential significant negative effects being reduced.
h) an outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information;	**Sustainability Appraisal Scoping Report (2013)** This appraisal first introduces the proposed framework to assess sustainability in Chapter 5 'A framework to assess sustainability'. **Interim Sustainability Appraisal (2014)** Chapter 3 'Sustainability appraisal methodology' sets out a description of the methodology use to undertake the assessment and the assessment of policy options is undertaken in Appendix 2. Alternatives were not selected at this stage as the report was based on policy options.

SEA Directive Requirements	Covered in SA
	Sustainability Appraisal Proposed Submission (2015) Chapter 3 'Sustainability appraisal methodology' sets out a description of the methodology use to undertake the assessment. This chapter also sets out where there were technical deficiencies in which specific data was not available at the time of the SA assessments an uncertain effect was identified in the full appraisals. Chapter 4 'Reasons for selecting/rejecting policy alternatives' sets out an outline of the reasons for selecting the alternatives dealt with. Appendix 2 'Sustainability appraisal of policies and site options' provides the full appraisal of policy and site options. The appraisal applies the sustainability appraisal methodology including identifying any difficulties encountered in compiling the required information, where there were technical deficiencies in which specific data was not available at the time of the SA assessments, an uncertain effect was identified in the full appraisals. Page 192 sets out the appraisal guidance followed when applying the pre-mitigation scoring system to potential allocation sites. It's noted that in some cases the scoring could differ from the guidance due to site specific context and a cumulative approach was taken when assessing allocation sites within each objective. Appendix 3 'Undeliverable site options' sets out the sites which were not deemed deliverable by the SHLAA panel. **Sustainability Appraisal Update (2017)** Paragraphs 2-9 of the SA Update (2017) describe the methodology that has been used throughout the SA process including where there were technical deficiencies in which specific data was not available at the time of the SA assessments an uncertain effect was identified in the full appraisals. The table following paragraph 9 sets out the assumptions that have been applied to the SA of potential site allocations. Information about the reasons for selecting additional reasonable options for appraisal is provided in Annex 2 of

SEA Directive Requirements	Covered in SA
	the SA Update (2017).
i) a description of the measures envisaged concerning monitoring;	**Sustainability Appraisal Proposed Submission (2015)** Chapter 5 'Monitoring' of the report sets out a description of the measures envisaged concerning monitoring.
j) a non-technical summary of the information provided under the above headings.	**Sustainability Appraisal Proposed Submission (2015)** A non-technical summary was published with the full Sustainability Appraisal Proposed Submission Report (2015).
The report must include the information that may reasonably be required taking into account current knowledge and methods of assessment, the contents and level of detail in the plan or programme, its stage in the decision-making process and the extent to which certain matters are more appropriately assessed at different levels in that process to avoid duplication of the assessment (Article 5.2)	**Sustainability Appraisal Scoping Report (2013)** Provided an introduction and context of Mid Devon District and the proposed Plan. The Report considered relevant plans and programmes, baseline information about Mid Devon, Sustainability issues and problems and set out a framework to assess sustainability for consultation. **Interim Sustainability Appraisal (2014)** Provided the same provisions as the Sustainability Appraisal Scoping Report (2013) and was updated to demonstrate the latest information available at the time of publication and in response to the initial consultation the Sustainability Appraisal Scoping Report (2013). This report also first introduces the findings of appraisal work on the policies proposed in the Local Plan Review and the likely significant effects. It provides a description of how the assessment was undertaken including any difficulties encountered in compiling the required information. It also makes recommendations for mitigation measures. However decisions for preferred alternatives were not taken at this stage as the Plan was out for consultation on the options for the Local Plan Review. Chapter 1 set out the compliance with the Strategic Environmental Assessment Directive and Regulations which identifies three areas that would be more appropriately addressed at a later stage of the SA process; the outline of the reasons for selecting alternatives dealt with, a description of the measures envisaged concerning monitoring and the non-technical summary.

SEA Directive Requirements	Covered in SA
	Sustainability Appraisal Proposed Submission (2015) Provided the same provisions of the Interim Sustainability Appraisal (2014) and was updated to demonstrate the latest information available at the time of publication. The update also responded to the consultation on the Interim Sustainability Appraisal (2014). This report introduces a mitigation column in the appraisals which sets out revised scores demonstrating how the mitigation proposed could affect the SA scores. The Sustainability Appraisal Proposed Submission (2015) also sets out an outline of reasons for selecting the alternatives dealt with, a description of the measures envisaged concerning monitoring and provides a non-technical summary. The SA Proposed Submission incorporates all of the information reasonably required. **Sustainability Appraisal Update (2017)** As noted in paragraph 1 of the update report, the update to the Sustainability Appraisal has been undertaken to take into account comments made at the 2015 Proposed Submission Stage consultation and proposed modifications to the Local Plan Review. The requirements not met in the SA Update (2017) are met in previous iterations of the Sustainability Appraisal.
Who should be consulted during SEA/SA process	
Authorities with environmental responsibility, when deciding on the scope and level of detail of the information which must be included in the environmental report (Article 5.4)	**Sustainability Appraisal Scoping Report (2013):** Chapter 6 'Consultation' identifies that the Council provided the opportunity to the three statutory environmental consultation bodies at the time of the scoping report which were Natural England, the Environment Agency and English Heritage (now Historic England). The opportunity to comment on the scope and level of detail of the information contained within the scoping report was also provided to local communities and other bodies on 8 July 2013 for 6 weeks. Every person and organisation including statutory consultees that appeared on the Mid Devon Local Development Framework database at the time of publication was informed of the opportunity to comment on the Local Plan Review Scoping Report and associated documents including the Sustainability

SEA Directive Requirements	Covered in SA
	Appraisal.
Authorities with environmental responsibility and the public, shall be given an early and effective opportunity within appropriate time frames to express their opinion on the draft plan or programme and the accompanying environmental report before the adoption of the plan or programme (Article 6.1, 6.2)	**Interim Sustainability Appraisal (2014):** Chapter 4 'Next steps' invites representations on the contents of the Local Plan Review and this accompanying Sustainability Appraisal. Consultation was held on 24th January 2014 for 8 weeks. Every person and organisation including statutory consultees that appeared on the Mid Devon Local Development Framework database at the time of publication was informed of the opportunity to comment on the Local Plan Review Options Consultation Report and associated documents including the Sustainability Appraisal. **Sustainability Appraisal Proposed Submission (2015)** Consultation was held on 9th February 2015 for 11 weeks. Every person and organisation including statutory consultees that appeared on the Mid Devon Local Development Framework database at the time of publication was informed of the opportunity to comment on the Local Plan Review Proposed Submission Report and associated documents including the Sustainability Appraisal. **Sustainability Appraisal Update (2017)** Consultation was held on 3rd January 2017 for 6 weeks. Every person and organisation including statutory consultees that appeared on the Mid Devon Local Development Framework database at the time of publication was informed of the opportunity to comment on the Local Plan Review Proposed Submission Report (incorporating proposed modifications) and associated documents including the Sustainability Appraisal.
Other EU Member States, where the implementation of the plan or programme is likely to have significant effects on the environment of that country (Article 7)	Not relevant to the SA of the Mid Devon Local Plan.
Decision-making	

SEA Directive Requirements	Covered in SA
The environmental report and the results of the consultations must be taken into account in decision-making (Article 8)	**Sustainability Appraisal Scoping Report (2013)** Consultation was undertaken on the Local Plan Review Scoping Report and the Sustainability Appraisal Scoping Report. **Interim Sustainability Appraisal Report (2014)** The Local Plan Review Options Consultation report was submitted to Cabinet on 9 January 2014 and was agreed for approval for public consultation and authority to be given to the Head of Planning and Regeneration, in consultation with the Cabinet Member for Planning, to make minor editorial changes to the text and maps. Chapter 3 'Sustainability appraisal methodology' of the Interim Sustainability Appraisal Report (2014) sets out a summary of the consultation responses received during 2013 consultation Local Plan Review Scoping Report and the Sustainability Appraisal Scoping Report (2013) and noted that the SA would be updated following consultation to take account of the responses received during the consultation. **Sustainability Appraisal Proposed Submission Report (2015)** The Local Plan Review Proposed Submission report was submitted to three Cabinet meetings for approval for publication and submission subject to confirmation by Full Council by area (West, Central and East) on 27 November, 4 December and 11 December 2014. Relevant extracts from the Sustainability Appraisal Proposed Submission Report was provided at each Cabinet meeting. The full Sustainability Appraisal was also made available to members on the Council's website to be considered alongside reports pack. Approval was also sought for the Sustainability Appraisal incorporating the Strategic Environmental Assessment, the Draft Habitats Regulations Assessment and other evidence produced in the process of the plan's preparation to be published for consultation alongside the Local Plan. Thirdly approval was sought for authority given to the Head of Planning and Regeneration, in consultation with the Cabinet Member for Planning, to

SEA Directive Requirements	Covered in SA
	make minor changes to the text and maps. Final approval by Full Council was made on the 17th December 2014 for consultation in 2015. Chapter 3 'Sustainability appraisal methodology' of the Sustainability Appraisal Proposed Submission Report (2015) sets out a summary of the consultation responses received during the two previous consultations on the Local Plan Review and Sustainability Appraisal and notes that the comments were incorporated into the Sustainability Appraisal Proposed Submission Report (2015). Chapter 4 'Reasons for selecting/rejecting policy alternatives' sets out a summary of the reasons for selecting/rejecting the strategic, allocation and development management policy alternatives. A statement of consultation before Local Plan publication was provided at the same time of consultation which set out the main issues raised during previous consultation and how these were responded to. Comments received in previous consultations and how the sustainability appraisal results were taken into account in decision-making are also demonstrated through the Local Plan Review Proposed Submission (February 2015) Consultation Summary Document. **Request for a J27 implications Report (2016)** A request by members was made in 2016 for a J27 implications Report which looked at the implications if members were minded to allocate J27 as part of the Local Plan Review Proposed Submission. This report was taken to Cabinet on the 15 September 2016 which set out the history of the J27 proposal and decisions previously made by members and the implications of allocating J27. The report also identified that if members were minded to make a modification to the plan to allocate land at J27, sites for an additional 260 dwellings will also need to be allocated in the Local Plan. Alternative housing option sites were set out to members based on a selection criteria as follows: sites previously consulted on as part of the Local Plan Review Options consultation (January 2014) or received as a local plan representation; sites considered by

SEA Directive Requirements	Covered in SA
	the Strategic Housing Land Availability Assessment Panel; compliance with the Local Plan Review Distribution Strategy; and proximate to the development proposal at Junction 27. The 2015 SA was publically available at the time the Implications Report was presented to members in 2016 and the draft 2015 SA was presented to members previously in the 2014 Cabinet (27 November, 4 December, 11 December) and Council meetings (17 December 2014). The Sustainability Appraisal was not mentioned in the Implications Report; however there is an apparent synergy in the reasons set out in the Implications Report and the Sustainability Appraisal (2015). Cabinet proposed a recommendation to Council that a 6 week consultation period take place prior to the submission of the Local Plan, Land at Junction 27 of the M5 be allocated for leisure retail and tourism development and associated additional housing sites giving the extra provision of 260 additional homes be allocated at Blundells Road, Tiverton and Higher Town, Sampford Peverell. The recommendations of Cabinet as set out above were taken to Council on 22 September 2016 and were approved. The plan as a whole was subsequently considered at the meetings of Cabinet on 21 November and Council 01 December 2016 where it was agreed that the Local Plan Review incorporating proposed modifications be publicised and consulted on for 6 weeks, and that delegated authority be given to the Head of Planning and Regeneration in consultation with the Cabinet Member for Planning for the plan's subsequent submission to the Planning Inspectorate for examination together with its supporting documentation. After consultation, the plan was submitted to the Planning Inspectorate together with supporting documentation on 31st March 2017 under the delegated authority. **Sustainability Appraisal Update (2017)** The Local Plan Review Proposed Submission report (incorporating proposed modifications) was submitted to Cabinet on 21 November 2016 for a recommendation of

SEA Directive Requirements	Covered in SA
	approval for publication and consultation, and that delegated authority be given to the Head of Planning and Regeneration in consultation with the Cabinet Member for Planning for the plan's subsequent submission to the Planning Inspectorate for examination together with its supporting documentation to full Council. The amended Local Plan Review incorporated the recommendations made at Council on 22 September 2016. A summary of the modifications proposed were summarised in the report pack with the full schedule of modifications appended to the report for viewing. The report references the Sustainability Appraisal and the findings of the Sustainability Appraisal process. The report notes that the Local Plan Review has been subject to Sustainability Appraisal during its preparation. The appraisal is an iterative process informing the development of the Local Plan Review and has been published alongside each stage of consultation. The Sustainability Appraisal assesses the likely significant effects of the Local Plan, focussing on the environmental, economic and social impacts. The latest version was updated to consider the latest available evidence including reasonable alternatives proposed through consultation responses. The Sustainability Appraisal Update concludes that the proposals set out in the Local Plan Review together with the schedule of modifications are the most appropriate given the reasonable alternatives available. The report identifies that the Sustainability Appraisal and other updated evidence produced in the process of the plan's preparation will be made available for comment during the Local Plan Review proposed modifications consultation. The report also makes reference to the Planning Policy Advisory Group which considered all paperwork accompanying the report. The report summarises the considerations of the group and their recommendations to Cabinet. The recommendations to Cabinet on the 21 November 2016 were agreed and were submitted to full Council on 01 December 2016. The submission to full Council included the report pack presented to Cabinet which contained reference to the Sustainability Appraisal

SEA Directive Requirements	Covered in SA
	for approval and were agreed. Para 1 of the Sustainability Appraisal Update (2017) sets out that this update to the Sustainability Appraisal has been undertaken to take into account comments made at the 2015 Proposed Submission Stage consultation and proposed modification to the Local Plan Review. The summary matrices in Annex 2 relating to the additional reasonable alternative options considered for each policy topic include a final row which states which option has been taken forward as a proposed change to the Plan if relevant, or if no changes are proposed to the Plan policies, why this is. Consultation was undertaken on the Sustainability Appraisal Update (2017) and the Local Plan Review Proposed Submission (incorporating proposed modifications) (2017). A statement of consultation was provided at the same time as this consultation which set out the main issues raised during previous three consultations and how these were responded to. Schedule of Proposed Modifications (Proposed Submission consultation) (November 2016) and the Sustainability Appraisal Update (2017) also demonstrate how the results of the consultations were taken into account. Comments received during this consultation including how the sustainability appraisal results were taken into account in decision-making are demonstrated through the Local Plan Review Proposed Submission (January 2017) Consultation Summary Document and the schedule of Proposed Minor Modifications (2017).
Provision of information on the decision	
When the plan or programme is adopted, the public and any countries consulted under Article 7 must be informed and the following made available to those so informed: • the plan or programme as adopted • a statement summarising how environmental considerations have	N/A – this requirement should be met at a later stage of the SA process.

SEA Directive Requirements	Covered in SA
been integrated into the plan or programme and how the environmental report of Article 5, the opinions expressed pursuant to Article 6 and the results of consultations entered into pursuant to Article 7 have been taken into account in accordance with Article 8, and the reasons for choosing the plan or programme as adopted, in the light of the other reasonable alternatives dealt with; and • the measures decided concerning monitoring (Article 9)	
Monitoring	
Monitoring of the significant environmental effects of the plan's or programme's implementation must be undertaken (Article 10)	**Sustainability Appraisal Proposed Submission (2015)** Chapter 5 'Monitoring' sets out how the Plan will be monitored.

Sustainability Appraisal framework objectives

~~1.~~12. A framework ~~is~~ used to understand the sustainability effects of the Local Plan Review ~~as~~ has been developed, consisting of sustainability objectives, each of which include a number of elements against which a policy will be appraised. The framework includes all those factors highlighted within the SA that will affect the sustainability of the Local Plan Review and is central to the process of SA.

Sustainability objective	Elements covered	Impact
A) Protection of the natural environment	Habitats and biodiversity; flora and fauna; protected species; landscape, geodiversity	
B) Protection and promotion of a quality built environment	Heritage assets, including listed buildings, conservation areas, scheduled ancient monuments, registered parks and gardens, locally listed assets, archaeology; design and quality of development	
C) Mitigating the effects of climate change	Reduced flood risk; promotion of low carbon or renewable energy; reductions in carbon emissions; resilience to climate change; walking and cycling provision; low carbon buildings	
D) Safeguarding and minimising resource use	Quality of soils, including contaminated land; water quality, including consideration of water framework directive objectives; water resources; minimisation of waste; impact on best and most versatile agricultural land	

E) Promoting economic growth and employment	Increasing jobs; reducing out-commuting; skills training; growth of rural businesses; tourism provision	
F) Supporting retail	Safeguarding the vitality and viability of town centres; relationship between new development and town centres; supporting viability of shopping facilities in villages	
G) Meeting housing needs	Supply of housing; housing mix; house size; housing affordability; appropriate housing density to location; proximity to services and facilities	
H) Ensuring community health and wellbeing	Community support for proposals; access to open space and recreation; limiting air, noise and light pollution to levels that do not damage human health or natural systems; integrated and sustainable forms of travel including walking, cycling and public transport; social deprivation; safe and secure environments	
I) Delivering the necessary infrastructure	Roads and transportation; schools; health services; community facilities; green infrastructure; telecommunications	

~~2.~~13. The sustainability objectives proposed are distinct from the objectives of the Local Plan Review, though they may in some cases overlap with them. They will provide a way of checking whether the Local Plan Review objectives are the best possible ones for sustainability and will test the social, environmental and economic effects of the plan.

~~3.~~14. In order to consider the impact of the Local Plan Review against the sustainability objectives, a scoring system has been used. A score is provided against each of the objectives to highlight a policy or proposal's sustainability impacts. Collectively, this allows consideration of a policy's overall impact and enables comparison with other policies or proposals. It also enables the consideration of mitigation measures in which a secondary score has been provided if mitigation measures are provided for.

~~4.~~15. It is important to note that the scores should not be summed to produce a total score to determine the overall sustainability of a policy or proposal. Mathematical models can lead to an 'artificial certainty' in determining the effect of a policy or proposal where the impacts of issues can be subjective.

~~5.~~16. The use of a scoring system with a range from +3 to -3 highlights the scale of any potential impact. This system enables the opportunity to differentiate between marginal or significant impacts. The following table sets out the scoring system that has been used:

Score	Rationale
+3	The policy/proposal will have a significant positive contribution towards achieving the objective
+2	The policy/proposal will have a positive impact in contributing towards achieving the objective

+1	The policy/proposal will have a minor positive impact in contributing towards achieving the objective
0	The policy/proposal will have no impact or will have some positive and some negative impacts thereby having a balanced effect in contributing towards achieving the objective
-1	The policy/proposal will have a minor negative impact in contributing towards achieving the objective
-2	The policy/proposal will have a negative impact in contributing towards achieving the objective
-3	The policy/proposal will have a significant negative contribution towards achieving the objective

~~6.~~17. In some instances where there were technical deficiencies in which specific data was not available at the time of the SA assessments, an uncertain effect has been identified which is indicated by a question mark in the scoring box..

~~7.~~18. In addition to the scoring process, a commentary against each objective has been provided. This sets out a summary of the context of the policy/allocation and a description of the impact against each of the sustainability objectives. Measures for mitigation are also described and scores for post-mitigation are provided, whereby if mitigation measures are applied negative impacts may be reduced. This includes consideration of whether impacts noted are offset by other policies in the plan. Secondary, cumulative, synergistic, temporary, permanent, short, medium or long-term impacts are also reflected.

~~8.~~19. General guidance was followed when applying the scoring system to potential allocation sites. A copy of the site allocations appraisal guidance provided on p.192 of the Local Plan Review: Proposed Submission Consultation Sustainability Appraisal (2015) is provided below.

SA framework – appraisal guidance [Allocations]

The following table sets out the general guidance followed when applying the pre-mitigation scoring system to potential allocation sites. In some cases the scoring may differ from this guidance due to site specific context. A cumulative approach was taken when assessing allocation sites within each objective.

Sustainability objective	Elements covered	Pre-Mitigation	Post-Mitigation
A) Protection of the natural environment	Habitats and biodiversity; flora and fauna; protected species; landscape; geodiversity	Neutral impact • If the site is within a town or existing development forms a backdrop of the site • If the site is appropriately screened, for example by being hidden in a fold of a hill Slight negative impact • Small site on the landscape (less 100 dwellings/10,000sqm) • Impact on a Tree Preservation Order • Impact on a protected landscape • Impact on local wildlife • Loss of hedgerows that provide screening • Existing development forms a backdrop but the site is highly visible Negative impact • Large site on the landscape (100 dwellings/10,000sqm +) • Site is highly visible and there is no existing development forming a backdrop	
B) Protection and promotion of a quality built environment	Heritage assets, including listed buildings, conservation areas, scheduled ancient monuments, registered parks and gardens, locally listed assets, archaeology; design and quality of development	Positive impact • Large scale town centre improvements Slight positive impact • Small scale town centre improvements • Good relationship with the settlement Slight negative impact • Impact on Listed Buildings / Conservation Area • Impact on Archaeological potential • Poor relationship with the settlement	

Sustainability objective	Elements covered	Pre-Mitigation	Post-Mitigation
C) Mitigating the effects of climate change	Reduced flood risk; promotion of low carbon or renewable energy; reductions in carbon emissions; walking and cycling provision; low carbon buildings	Slight positive impact • Bus service • Train service Neutral impact • Flood zone 1 • No train services (as limited areas have a train service and therefore it would not necessarily be expected of all areas in Mid Devon) Slight negative impact • Small scale development, potential impact on groundwater (less 100 dwellings/10,000sqm) • No delivery of Sustainable Urban Drainage • Small watercourse • Source Protection Zone • No bus service • Large scale sites due to potential carbon impact Negative impact • Large scale development, potential impact on groundwater (100 dwellings/10,000sqm +) • Flood Zone 2/3	
D) Safeguarding and minimising resource use	Quality of soils, including contaminated land; water quality, including consideration of water framework directive objectives; minimisation of waste; impact on best and most versatile agricultural land	Positive impact • Brownfield land Neutral impact • Small scale grade 4-5 agricultural land Slight negative impact • Large scale grade 4-5 agricultural land • Small scale grade 3 agricultural land • Minerals Consultation Zone Negative impact • Small scale grade 1-2 agricultural land • Large scale grade 3 agricultural land	

Sustainability objective	Elements covered	Pre-Mitigation	Post-Mitigation
		• Contaminated land Significant Negative Impact • Large scale grade 1-2 agricultural land *Small scale = <20ha* *Large scale = >20ha*	
E) Promoting economic growth and employment	Increasing jobs; reducing out-commuting; skills training; growth of rural businesses; tourism provision	Significant positive impact • Large scale commercial development Positive impact • Small scale commercial development Slight positive impact • Large scale residential development Neutral impact • Small scale residential development Negative impact • Small scale loss of commercial development Significant negative impact • Large scale loss of commercial development *Small scale = <100 dwellings / 10,000sqm* *Larger scale = > or equal to 100 dwellings /10,000sqm*	
F) Supporting retail	Safeguarding the vitality and viability of town centres; relationship between new development and town centres	Significant positive impact • Commercial development within a town centre Positive impact • Large scale residential development within a town (> or equal to 100 dwellings) Slight positive impact • Small scale residential development within a town (< 100 dwellings) Neutral impact • Commercial development outside of a town centre • Residential or commercial development within a village	
G) Meeting	Supply of housing;	Significant positive impact	

Sustainability objective	Elements covered	Pre-Mitigation	Post-Mitigation
housing needs	housing mix; house size; housing affordability; appropriate housing density to location; proximity to services and facilities	• Residential large scale development Positive impact • Residential medium scale development Slight positive impact • Residential small scale development Neutral impact • Commercial development *Small scale* = 1-19 dwg *Medium scale* = 20-99 dwg *Large scale = 100+dwg*	
H) Ensuring community health and wellbeing	Community support for proposals; access to open space and recreation; limiting air, noise and light pollution to levels that do not damage human health or natural systems; integrated and sustainable forms of travel including walking, cycling and public transport; social deprivation; safe and secure environments	Positive impact • Provides a community service Slight positive impact • Town sites - walking distance to services Neutral impact • Village sites - designated village Slight negative impact • Pollution • Town sites – beyond walking distance to services • Village sites - not a designated village • Village sites – designated village but large development e.g. 100+ housing • Requires footpath provision • Loss of undesignated recreational land • Impact but not loss of designated open space Negative impact • Loss of a community service • Loss of a designated Local Green Space • Large site which will require new community services and facilities	
I) Delivering	Roads and	Positive impact	

Sustainability objective	Elements covered	Pre-Mitigation	Post-Mitigation
the necessary infrastructure	transportation; schools; health services; community facilities; green infrastructure; telecommunications	• Significant infrastructure e.g. relief road Slight positive impact • Green infrastructure is provided Neutral impact • Access is achievable • School has capacity for additional development Slight negative impact • No infrastructure provided, small site (<100 dwellings/10,000sqm) • School is at capacity, places can be supported through developer contributions • Access is achievable but would require additional works Negative impact • School is at capacity, development proposed would require a new school	

~~This update to the Sustainability Appraisal is set out as follows:~~

~~Annex 1 – Sustainability Appraisal text, methodology and cumulative impact comments (p.10 – 23)~~

~~This annex sets out comments from the Local Plan Review Proposed Submission Consultation (2015) on the contents of the sustainability appraisal (SA) text, methodology and cumulative impacts.~~

~~Annex 2 – Further reasonable alternatives, new information and comments on the sustainability appraisal of policies and sites (p.24 – 165)~~

~~This annex provides a summary of additional reasonable alternatives considered and proposed changes to the sustainability appraisal for example through new information. Minor proposed changes to the Local Plan have not been assessed as these were deemed to not give rise to significant effects.~~

~~Annex 3 – Additional Reasonable Alternative Appraisals (p.166 – 337)~~

~~This annex provides the full appraisals used to assess reasonable alternatives where deemed necessary as summarised in Annex 2.~~

~~Annex 4 – Non technical summary and overall sustainability appraisal of Plan (p.339 – 345)~~

~~This annex summarises the main changes made to the Local Plan Review following the appraisal of alternatives set out in Annex 2 and assesses the overall sustainability of the proposed Local Plan.~~

Junction 27 proposal and options for disaggregation and location

20. A key principle of retail planning is that main town centre uses should be allocated on the basis of a sequential test (NPPF paragraph 24). Case law in relation to development management decisions establishes that sequential test site selection must relate to *the suitability of a site for the developer's proposal not some alternative (and reduced) scheme which might be suggested by the Planning Authority (or others)*; see Tesco Stores Ltd v Dundee City Council [2012] UKSC13. This principle has been upheld in subsequent decisions, such as Aldergate Properties Ltd and Mansfield DC and Regal Sherwood Oaks [2016] EWHC1670. The Secretary of State also agreed with his Inspector that there was no requirement to disaggregate a mixed use tourism and retail proposal at "Rushden Lakes, Northamptonshire (APP/G2815/V/12/2190175). In relation to planning policy and plan making the National Planning Guidance provides that the sequential approach requires a thorough assessment of the suitability, viability and availability of locations for main town centre uses. It requires clearly explained reasoning if more central opportunities to locate main town centre uses are rejected. It states:

- Has the need for main town centre uses been assessed? The assessment should consider the current situation, recent up-take of land for main town centre uses, the supply of and demand for land for main town centre uses, forecast of future need and the type of land needed for main town centre uses
- Can the identified need for main town centre uses land be accommodated on town centre sites? When identifying sites, the suitability, availability and viability of the site should be considered, with particular regard to the nature of the need that is to be addressed
- If the additional main town centre uses required cannot be accommodated in town centre sites, what are the next sequentially preferable sites that it can be accommodated on? Local Plans should contain policies to apply the sequential test to proposals for main town centre uses that may come forward outside the sites or locations allocated in the Local Plan.

Paragraph: 009 Reference ID: 2b-009-20140306

21. The Junction 27 policy is for the delivery of a major leisure destination providing mixed use development comprising travel hub, agronomy visitor centre, outdoor adventure zone and outlet shopping village. The retail element is integral to the overall proposal. It ensures the development provides a unique multifaceted visitor attraction and assists delivery in terms of viability and the inter-relationship between the elements which is seen as essential.

22. In terms of Sustainability Appraisal, reasonable alternatives must be of a similar size to accommodate the proposed development i.e. around 71 ha. Apart from a "business as usual" option (i.e. not including a major mixed use tourist/retail proposal), smaller areas cannot be considered as reasonable alternatives as they would be too small to accommodate the proposal without disaggregation. It would not be appropriate to require an SA to consider sites that were ruled out as being suitable sequentially preferable sites.

23. The Council's Hearing Statement on Junction 27 as well as paragraph 3.184c of the Submitted Local Plan indicates that other areas have been considered. CBRE assessed 6 sites within and close to town centres at, Tiverton, Crediton, Taunton and Exeter and Exmouth. However these sites are too small to accommodate the proposal without disaggregation. The Council commissioned Lichfields to consider additional sites which it did not feel were fully assessed by CBRE. These were Exeter Bus and Coach Station, Tiverton Eastern Urban Extension, North West and East Cullompton. Exeter Bus and Coach Station was too small (3.3 ha) and would require disaggregation. It also appeared that the site was being promoted for a different type of development to the J27 proposal. Whilst sites within urban extensions were in principle large enough these are subject to other proposals and are not therefore reasonable alternatives to Junction 27 (see paragraph 3.15- 3.19 of the Council's Hearing Statement J27 Issue 3 https://www.middevon.gov.uk/media/344022/j27-mddc-2-mid-devon-council-issues-2-3-4-8-hearing-statement.pdf)

24. The Sustainability Appraisal Update (2017) assessed the proposed modifications of the Local Plan Review Proposed Submission, including J27. It notes (p115-117) that: "On the 22nd September 2016 Full Council resolved to propose an allocation of 71 hectares between M5 Junction 27 and Willand for mixed commercial floorspace including a travel hub, agronomy visitor centre, outdoor adventure zone and outlet shopping village. The policy includes transport provision, environmental protection, a comprehensive phasing programme and public master planning exercise. In comparison to the Proposed Submission Sustainability Appraisal option, this commercial option encompasses a smaller site area, a number of the town centre uses have been withdrawn and new information has been provided to determine the retail impact. Taking the policy amendments and new information into account the allocation has been reappraised".

25. It reappraised the J27 proposal against the Proposed Submission option, which was the rejected 96ha commercial scheme. The 71ha scheme (26% smaller) was found to perform better than the larger alternative. A summary matrix was presented for the Junction 27 option setting out a summary of the comparison between the 96ha site appraised in the Sustainability Appraisal Proposed Submission (2015) report and the

71ha scheme appraised in the Sustainability Appraisal Update (2017), this is reflected below.

Summary Matrix – OJ27

	Preferred	Alternative
Sustainability Objective	Proposed Modifications Policy 71ha	Proposed Submission Option 96ha
A	-1	-2/?
B	0/?	0/?
C	-1/?	-1/?
D	-2	-3/?
E	+3	+3
F	+3	-3/?
G	0	0
H	+1	+2
I	+2/?	+2/?

26. The 2015 Sustainability Appraisal supported the Proposed Submission Local Plan Review (2015).This considered a spatial strategy and site allocations that were at the time the Council's preferred option, and as such constitutes an assessment of reasonable alternative strategies which did not incorporate a major tourism/retail proposal. The assessment from page 30 et seq of the SA sets out why sites were preferred and others rejected including options for potential a new community at Cullompton, Hartnoll Farm and J27 Willand which are assessed at page 35 and Appendix 2 p135 onwards.

27. A site of 96 ha at J27 is assessed for potential mixed use commercial development in Appendix 2 from p605 onwards and a more extensive urban extension of 104 ha in this location is assessed from p611. Neither of these options were considered sustainable and therefore not at that time included in the Proposed Submission Local Plan Review.

Sites to allocate in relation to the Junction 27 proposal

28. A request by members was made in 2016 for a J27 implications Report which looked at the implications if members were minded to allocate J27 as part of the Local Plan Review Proposed Submission. This report was taken to Cabinet on the 15th September 2016 and Council on 22nd September 2016 which set out the history of the J27 proposal and decisions previously made by members and the implications of allocating J27. The

report also identified that if members were minded to make a modification to the plan to allocate land at J27, sites for an additional 260 dwellings will also need to be allocated in the Local Plan. Alternative housing option sites were set out to members based on a selection criteria as follows: sites previously consulted on as part of the Local Plan Review Options consultation (January 2014) or received as a Local Plan representation; sites considered by the Strategic Housing Land Availability Assessment Panel; compliance with the Local Plan Review Distribution Strategy; and proximate to the development proposal at Junction 27.

29. Individual sites were considered at an officer level where they met the selection criteria. These where then presented to members at Cabinet on 15th September and Council on the 22nd September 2016 in a collated format. Not all sites or all village locations that were considered at an officer level were referred to in the committee paperwork on the 15th or 22nd September 2016. However the reasons for rejecting site options set out in the Implications Report and the Sustainability Appraisal (2015) are broadly the same. The 2015 SA was publically available at the time the Implications Report was presented to members in 2016 and the draft 2015 SA was presented to members previously in the 2014 Cabinet (27 November, 4 December, 11 December) and Council meetings (17 December 2014).

30. Following the recommendations undertaken on the 15th and 22nd September, a report was presented to Cabinet on 21st November 2016 and full Council 1st December 2017 which sought approval for publication of the Local Plan Review including main modifications and supporting evidence. This report makes reference to the Sustainability Appraisal Update and that the Planning Policy Advisory Group which considered all paperwork accompanying the report and provided their recommendations to the 15th September Cabinet. The report summarises the considerations of the group and recommendations.

31. The tables below sets out a summary of the site option areas and the site options that met the criteria identified in the Implications Report. Sites with planning permission or which are already proposed for allocation are not considered as reasonable alternatives for the additional dwellings.

Table 5: Summary of site option areas

Site option area	Reason
Cullompton	Cullompton is the main focus of growth during the plan period; a significant amount of development is already programmed for Cullompton during this period. Analysis which forms part of the Local Plan Review Evidence base considers the level of infrastructure improvements, in particular strategic highways work, which would need to be delivered to accommodate the

Site option area	Reason
	proposed level of growth. The required infrastructure improvements will be delivered in line with the phased delivery of the key strategic housing allocations planned for Cullompton. Any additional development on top of the current Local Plan allocations would therefore not be appropriate until longer-term strategic highway improvements have been delivered. Cullompton is therefore not considered as a reasonably appropriate location to meet the extra housing need.
Crediton	Crediton is not well related to the proposal at Junction 27 and is therefore not an area considered for additional residential development to meet this need.
Tiverton	Tiverton is considered as a site option area to consider reasonable alternatives for additional residential development to meet this need.
Villages proximate[1] to J27	• Culmstock • Halberton • Hemyock • Holcombe Rogus • Kentisbeare • Sampford Peverell • Uffculme • Willand
Villages proximate to J27 and referred to in committee paperwork on 22nd September 2016	• Hemyock • Kentisbeare • Sampford Peverell • Uffculme • Willand
Villages not proximate to J27	The following villages were not considered as proximate to J27 and therefore were not to be considered as reasonable alternatives for additional residential development to meet this need: • Bampton • Bow • Bradninch • Chawleigh • Cheriton Bishop • Cheriton Fitzpaine • Copplestone • Lapford • Morchard Bishop

[1] Proximate is considered to be: 30 minutes of J27 by walking, cycling or public transport

Site option area	Reason
	• Newton St Cyres • Sandford • Silverton • Thorverton • Yeoford
Areas not consistent with the proposed Local Plan Review distribution strategy	The following areas were not considered as consistent with the proposed Local Plan Review distribution strategy as they are not defined as villages in S13 and therefore were not considered as reasonable alternatives for additional residential development to meet this need: • Bickleigh • Butterleigh • Burlescombe • Colebrooke • Oakford • Shillingford

Table 6 – Site options which meet the selection criteria as set out in the Implications Report

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
Sites at Tiverton			
Hay Park	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** This option has not been taken forward as development would result in the loss of historic barns (to ensure adequate access visibility displays) and has surface water flooding issues associated with the water course on site.
Blundells School	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Selected:** The site is proposed to be taken forward as an allocation and addressed in the Sustainability Update through policy TIV16. The site was considered as part of the J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016. It was noted at this time that the site is currently

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
			allocated in the adopted Local Plan for 200 dwellings and was due to be deleted in the Local Plan Review as the site had not come forward. However officers now understand that the land is available and developable. The site is significantly a brownfield site which is accessible from Tiverton town centre. Development of the site provides the opportunity for remodelling of the site to reduce flood risk downstream. Whilst it is located further from J27 than some other assessed sites, it is on a bus route that serves both the Tiverton town centre and J27, and the sites otherwise sustainable location is considered to outweigh the issue of distance from J27.
Leat Street	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** In the Sustainability Appraisal Proposed Submission Report (2015) it is noted in Chapter 4 'Reasons for selecting/rejecting policy alternatives' that this option had not been taken forward as it is an existing show room and as a residential allocation would result in the loss of employment land. A large proportion of the site is also located in flood zone 2 and even with mitigation measures there would remain flooding concerns.
The Avenue	Uncertain	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** Although the site scores positively on sustainability grounds the site is not being comprehensively promoted by all land owners and has not received confirmation of delivery. It is also noted that the site is located within the settlement boundary and can come forward as a windfall allocation. The site is potentially a reasonable

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
			alternative, but uncertainty over deliverability means that it is rejected as an allocation.
Exeter Hill	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2 The SA Update in 2017 also included a revised appraisal of this site to take into account a consultation comment received.	**Rejected:** The site is a steeply sloping site with large views of Tiverton and would be highly visible from the town. Although the level of development is relatively low, development of the site is still likely to result in a negative impact on the character of the landscape. It was rejected as an option for the additional housing allocation as the site would be more intrusive than other allocations.
Land at Bampton Street/William Street Car Park (mixed use)	Uncertain	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** Although in sustainability terms the sites regeneration would be positive, the SCLAA panel has raised deliverability concerns. Whilst the site may be a reasonable alternative, however it is in different ownerships, which is not being actively promoted. The uncertainty over deliverability resulted in its rejection. However it is a town centre site and could be developed as a windfall site, should a proposal come forward.
Hartnoll Farm (considered for both housing or mixed use)	Yes	SA Report for the Local Plan Review (Proposed Submission	**Rejected:** The full site area would extend Tiverton to the East substantially on the valley floor which would significantly close the gap between urban areas and nearby villages, especially Halberton. It would

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
		consultation) February 2015 – Appendix 2 The Sustainability Appraisal Update (2017) included revised appraisal work to consider the site as a revised mixed use allocation.	also increase the distance from the town centre and services, resulting in increased car use and reduced sustainability. The majority of the site is classed as agricultural grade 1 land development could impact on the Grand Western Canal Conservation Area to the South and the East of the site which is also classed as a County Wildlife Site and Local Nature Reserve. The Sustainability Appraisal Update (2017) included revised appraisal work to consider the site as a revised mixed use allocation which was proposed through the Sustainability Appraisal (2015) consultation. It was rejected as an option given the issues around the protection and promotion of a quality built and historic environment in which the coalescence of Tiverton and the village of Halberton which has its own separate identity cannot be mitigated. The site was considered as part of the J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016, options presented included an addition of 480 dwellings which could be provided within the existing planned for infrastructure constraints recognised in the existing adopted Local Plan site Tiverton Eastern Urban Extension. The report notes that if the Tiverton Eastern Urban Extension site which is currently allocated in the Local Plan was to be extended to allow for the additional housing it would be logical for this to include land at Hartnoll Farm which abuts the current urban extension. The

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
			full extent of the Hartnoll Farm site (70ha) was considered as part of the Local Plan Review Options Consultation (2014) and Sustainability Appraisal Proposed Submission Report (2015). The implications report noted that if only part of this site was needed it would be sensible for this to comprise the western and southern parts of the site which are predominantly Grade 3 agricultural land and are well screened from wider views. This would allow for the areas adjoining the Grand Western Canal to be left undeveloped whilst also maintaining the strategic green gap between the edge of Tiverton and Halberton village which was identified as one of the key reasons for rejection in the Sustainability Appraisal Proposed Submission report (2015). The Implications Report notes that a new access, or reconfiguration of the current Hartnoll Farm/employment land access arrangements, would be needed to allow development to occur independently of the development of the current eastern urban extension. The report recommends that if members were minded to allocate some land at the Hartnoll Farm an option 200 dwellings should be proposed to allow flexibility for the further refinement of densities at the Tiverton Eastern Urban Extension should this be necessary. This site was not preferred at the Full Council meeting on 22nd September 2016 and therefore not taken forward as a proposed allocation for the additional dwellings.
Land at Seven Crosses Hill	No	The Sustainability	**Rejected:** This site came forward during the consultation on the Local Plan Review

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
		Appraisal Update (2017) included appraisal work to consider the site.	Proposed Submission (2015) but it was rejected as a housing allocation as there were a number of constraints to the site including topography and highways access. The site is to the south west of Tiverton and is steeply sloping. It is 7.69 ha and would therefore be too large to meet the identified need.
Sites at the Villages			
Culmstock Glebe and Rackfields, Culmstock	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** The two sites 'Glebe and Rackfields' and 'The Croft' in Culmstock were not preferred as they were within the elevated southern part of the village, with greater potential for landscape and visual impacts. This part of the village also contains the core of the conservation area, which is focussed around All Saints Church. There is greater potential for the impact on the conservation area should either of these sites be developed which can be avoided by selecting others. In addition these two sites in the village received the greatest level of objection of all the village's sites during the Options consultation.
The Croft, Culmstock	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** The two sites 'Glebe and Rackfields' and 'The Croft' in Culmstock were not preferred as they were within the elevated southern part of the village, with greater potential for landscape and visual impacts. This part of the village also contains the core of the conservation area, which is focussed around All Saints Church. There is greater potential for the impact on the conservation area should either of these sites be developed which can be avoided by selecting others. In

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
			addition these two sites in the village received the greatest level of objection of all the village's sites during the Options consultation.
Land at Blundells Road, Halberton	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** The site is within the conservation area with the potential for negative impacts which can be avoided by allocated other sites. Land at Blundells Road was also not favoured by the Parish Council. The Sustainability Appraisal Update (2017) refers to a number of consultation comments relating to this site but no changes have been made to the SA work undertaken previously and it remains rejected as a site option.
New Site: The Pethers, Halberton	~~Yes~~ No	This site came forward during the consultation on the Local Plan Review Proposed Submission (2015). The Sustainability Appraisal Update (2017) included appraisal work to consider the site.	**Rejected:** The site is rejected as a preferred site. The site was put forward as an alternative to Policy HA1 in Halberton with a capacity of up to 10 dwellings in 2015. It has outline permission (17/0019/OUT) for 5 dwellings. It is therefore too small to be a reasonable alternative for additional site allocation to meet the need for J27.
Land South West of Conigar Close, Hemyock	No	SA Report for the Local Plan Review (Proposed Submission consultation)	The site now has planning permission (17/00746/MARM for 22 dwellings 23/08/2017) so is no longer a reasonable option for meeting the additional housing need, but will instead be part of the general local plan requirement.

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
		February 2015 – Appendix 2	
Culmbridge Farm, Hemyock	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** The four alternative sites presented in Hemyock are all greenfield sites within the location of the Blackdown Hills AONB and the impact on the special qualities of the landscape designation is a factor to consider. The four greenfield sites all have the potential for some landscape and visual impact in the context of the Blackdown Hills AONB and therefore are not preferred. The site was considered as part of the J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016. It was noted that sites in Hemyock were not favoured owing to their scale and impact on the Area of Outstanding Natural Beauty.
Land north of Culmbridge Farm, Hemyock	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** The four alternative sites presented in Hemyock are all greenfield sites within the location of the Blackdown Hills AONB and the impact on the special qualities of the landscape designation is a factor to consider. The four greenfield sites all have the potential for some landscape and visual impact in the context of the Blackdown Hills AONB and therefore are not preferred. The site was considered as part of the J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016. It was noted that sites in Hemyock were not favoured owing to their scale and impact on the Area of Outstanding Natural Beauty.
Land adj. cemetery,	Yes	SA Report for the Local Plan	**Rejected:** The four alternative sites presented in Hemyock are all greenfield

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
Hemyock		Review (Proposed Submission consultation) February 2015 – Appendix 2	sites within the location of the Blackdown Hills AONB and the impact on the special qualities of the landscape designation is a factor to consider. The four greenfield sites all have the potential for some landscape and visual impact in the context of the Blackdown Hills AONB and therefore are not preferred. The site was considered as part of the J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016. It was noted that sites in Hemyock were not favoured owing to their scale and impact on the Area of Outstanding Natural Beauty.
Land by Kentisbeare Village Hall, Kentisbeare (mixed use)	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** This site received a number of objections during the Options Consultation. Although it is an existing allocation, it has not come forward since being allocated in 2010, for these reasons it is not proposed to be retained in the Local Plan Review. The site was considered as part of the J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016. It was noted that land was previously included in the Local Plan at Kentisbeare next to the Village Hall as an affordable housing allocation for 20 dwellings. This was removed owing to a lack of impetus in the site coming forward for affordable housing and due to strong objection from the Parish Council. However if allocated for a mix of market and affordable housing it is considered that it would come forward for development. This site was not supported by the Planning Policy Advisory Group and

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
			was not preferred.
Higher Town, Sampford Peverell	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Selected:** In the Sustainability Appraisal Proposed Submission Report (2015) it is noted in Chapter 4 'Reasons for selecting/rejecting policy alternatives' it is stated that this option was not preferred because it had the potential for greater landscape or visual impacts. As set out in the Sustainability Appraisal Update (2017), criteria have now been included in the policy to ensure landscaping and design respects the setting and character of the area, conservation area and listed building. The site is proposed to be taken forward as an additional allocation and addressed in the Sustainability Appraisal Update (2017) through policy SP2. The site was considered as part of the J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016. It was noted at this time that Land at Higher Town could provide 60 dwellings. The site is elevated and would require careful landscaping and mitigation measures. The development is proportionate to the scale of the existing village. The Highway Authority has advised that any development of the site should be phased until after improved access to the A361. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that other potential sites in Sampford Peverell were not considered to be of an appropriate scale or would impact adversely on heritage assets.

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
			Several of the sites in Sampford Peverell are reasonable alternatives, and have similar landscape or heritage characteristics. They have an advantage of being slightly closer to J27 than Higher Town. However, they are part of more extensive tracts of land, and their allocation would result in larger housing sites than the identified additional need for 60 dwellings. It would not be realistic to seek to artificially subdivide sites to limit the number of units that are developed. As such, development of a number of potentially suitable sites in Sampford Peverell would result in much more significant expansion of the village This would be contrary to the spatial strategy in Policy SP2 of the Local Plan Review, which concentrates development in the three main towns and has limited development in other settlements aimed at meeting local needs and promoting vibrant communities. Conversely SP2 is a naturally enclosed site, bounded by hedgerows and road, and its development would be of a scale acceptable within the parameters of Policy S2 and local infrastructure constraints. The location of the site on the west of the village is considered to be only a minor disadvantage compared to the other sites in the village. The site is being actively promoted and is deliverable.
Land off Whitnage Road, Sampford Peverell	Yes	SA Report for the Local Plan Review (Proposed	**Rejected:** This option is located adjacent to the A361, sharing a long boundary with this busy road. Such a site therefore has greater potential for negative impacts

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
		Submission consultation) February 2015 – Appendix 2	from noise on the general amenity of future residents which can be avoided by allocating alternative sites. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that other potential sites in Sampford Peverell were not considered to be of an appropriate scale or would impact adversely on heritage assets.
Land at Mountain Oak Farm, Sampford Peverell	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** This option is a large site slightly divorced from the main body of the village, and does not offer the most logical extension to the built extent. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that other potential sites in Sampford Peverell were not considered to be of an appropriate scale or would impact adversely on heritage assets. See above under the rationale for selecting Higher Town.
Morrells Farm, Sampford Peverell (SHLAA site 6)	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** This option is a very large site which has a poor spatial relation with the village, it is out of scale with the settlement and divorced from the main built extent of Sampford Peverell. Although a smaller element of the site could be allocated there is currently very little development in the vicinity of the site and as such there is the greater potential for landscape and visual impacts. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that other potential sites in Sampford Peverell were not considered to be of an

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
			appropriate scale or would impact adversely on heritage assets. See above under the rationale for selecting Higher Town.
Morrells Farm adj. the main road, Sampford Peverell (SHLAA site 3&4)	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** This option would likely have an impact on the Grade II farmhouse, and would have a detrimental impact on the significance, character and appearance of the conservation area, particularly as the proposed access point requires demolition of a stone frontage wall and a group of traditional farm buildings (all within the conservation area). The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that other potential sites in Sampford Peverell were not considered to be of an appropriate scale or would impact adversely on heritage assets. See above under the rationale for selecting Higher Town.
Land adjoining Poynings, Uffculme	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** This option is located within an area of the village which is elevated and has a more distinctly rural character, with fewer buildings and with access being from the generally narrow Chapel Hill. The potential for change in character and visual and or landscape impacts determined the decision not to allocate this site. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that sites in Uffculme were considered, however were not proposed as allocations for the additional housing as the sites were not deemed to be appropriate

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
			extensions to the village, had access difficulties and some were in Minerals Safeguarding Areas.
Land adjacent Sunnydene, Uffculme	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** This option is located at the edge of the settlement where the nearest dwellings are very low density and is accessed off the narrow Clay Lane. Although technically deliverable, the nature of the location of the site at some distance along the single carriageway lane is considered sufficient basis not to allocate. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that sites in Uffculme were considered, however were not proposed as allocations for the additional housing as the sites were not deemed to be appropriate extensions to the village, had access difficulties and some were in Minerals Safeguarding Areas.
Land off Chapel Hill, Uffculme	No	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	This option has been confirmed as unavailable since the inclusion in the Local Plan Review Options Consultation (2014). Therefore this site is not a reasonable alternative to consider.
Land off Ashley Road, Uffculme	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015	**Rejected:** This option has planning permission on the southern extent and the northern extent is within the Hillhead Quarry Consultation Zone. The northern extent is also elevated in comparison with the adjacent housing to the east which could result in overlooking. For these

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
		– Appendix 2	reasons, the site is not preferred. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that sites in Uffculme were considered, however were not proposed as allocations for the additional housing as the sites were not deemed to be appropriate extensions to the village, had access difficulties and some were in Minerals Safeguarding Areas.
Land west of Uffculme, Uffculme	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	The development of this site would extend the pattern of the village in a linear fashion along the B3440. It would also result in long walking distances to the village's facilities, in particular the primary and secondary schools. In addition, inspectors have previously drawn attention to the present boundary of the village, to the front of Harvester, being a defined feature beyond which the village should not be extended. Further to a subsequent appeal decision and alternative inspector's comments, the majority option site area now has planning permission. The area with planning permission is now included in the Local Plan Review to reflect the decision at appeal. The option is therefore no longer reasonable. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that sites in Uffculme were considered, however were not proposed as allocations for the additional housing as the sites were not deemed to be appropriate extensions to the village, had access

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
			difficulties and some were in Minerals Safeguarding Areas.
Quicks Farm, Willand	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** Although the site scores favourably in the SA, it received the greatest level of objection of all sites in the village during the Options consultation and therefore was not preferred at the time. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that sites in Willand were considered. Although there were developable sites in the village, sites in Willand were not recommended as Devon County Council had advised that development of these sites would exacerbate traffic problems prior to planned future improvements.
Dean Hill Road, Willand	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** The site is divorced from the main body of Willand by the motorway. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that sites in Willand were considered. Although there were developable sites in the village, sites in Willand were not recommended as Devon County Council had advised that development of these sites would exacerbate traffic problems prior to planned future improvements.
Land NE of Four Crosses Roundabout, Willand	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** The site is very large which would expand the village beyond the boundary currently delineated by the busy roads of the B3181 and B3440. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that sites in Willand were considered. Although there

Site options considered during the SA process for the Local Plan Review	Reasonable alternative option for additional site allocations?	Location of site appraisal matrix	Reason for selecting/rejecting option for additional housing allocation
			were developable sites in the village, sites in Willand were not recommended as Devon County Council had advised that development of these sites would exacerbate traffic problems prior to planned future improvements.
Lloyd Maunder Way, Willand	Yes	SA Report for the Local Plan Review (Proposed Submission consultation) February 2015 – Appendix 2	**Rejected:** The site is divorced from the main body of Willand by the motorway. The J27 Implications Report presented to Cabinet 15th September 2016 and Full Council 22nd September 2016 noted that sites in Willand were considered. Although there were developable sites in the village, sites in Willand were not recommended as Devon County Council had advised that development of these sites would exacerbate traffic problems prior to planned future improvements.

Summary and Conclusions

32. This chapter summarises the main changes made to the Local Plan Review following the appraisal of alternatives set out in Annex 2 and assesses the overall sustainability of the proposed Local Plan. The development of the Local Plan Review has been an on-going and iterative process with key pieces of evidence influencing the selection and rejection of options. Through the Local Plan Review Proposed Submission Consultation (2015) a number of alternatives were proposed, along with the presentation of new information. As a result a number of modifications to the proposed policies and supporting text of the plan are proposed. The full details of these proposed alternatives and new information are provided in annex 2 and 3. Annex 2 also sets out the reasons for selecting/rejecting the alternatives proposed. This annex summarises the main changes to the Local Plan Review following the appraisal of alternatives set out in annex 2, and assesses the overall sustainability of the Local Plan Review.

Strategic Policies

Policy S2: Amount and Distribution of development

33. An alternative to amend the dwelling target to 7,860 to meet the objectively assessed housing need (OAN) with the additional housing requirements of Junction 27 is preferred due to new information presented in the finalised Strategic Housing Market Area report which became available during the consultation on the Local Plan Review Proposed Submission (2015) and following the Council decision on 22nd September 2016 to propose to allocate land at Junction 27 for a strategic scale employment site. Similarly the higher commercial growth scenario including the Junction 27 option is proposed as a modification to the plan.

Policy S3: Meeting housing needs

34. Updates to the policy are proposed given the change to the OAN suggested in policy S2.

Policy S4: Ensuring housing delivery

35. Updates to the policy are proposed given the change to the OAN suggested in policy S2.

Policy S5: Public open space

36. A change to the wording is proposed to clarify that the policy refers to the parish boundaries of the settlements noted.

Policy S12: Crediton

37. An additional criterion is proposed in the policy which is as follows 'community and education facilities and other infrastructure to support the development proposed' to reflect the need for a new primary school in Crediton.

Policy S14: Countryside

38. The removal of reference to the provision of gypsy and traveller accommodation in this policy is proposed to ensure the Plan is in conformity with national policy in which the 'Planning Policy for Traveller Sites' (2015) which requires that new sites for travellers should be very strictly limited in open countryside that is away from existing settlements or outside areas allocated in the development plan.

Site Allocations

Tiverton

TIV1-TIV5 Eastern Urban Extension

39. The policy is proposed to be amended to consider a housing range of 1580-1830 which reflects the permissions granted on area A and the potential for increased density in area B.

TIV14 Wynnards Mead

40. The policy is proposed to be deleted to reflect new information regarding the historic environment and flood risk.

OTIV4 Blundells School (Proposed for allocation TIV16)

41. This site is proposed to be allocated following the Council decision on the 22nd September to allocate land at Blundells School for residential development. New information provided includes the support of developing the site from the Environment Agency which has resulted in this proposed policy scoring more positively than the option considered in the Local Plan Review Proposed Submission consultation (2015).

Cullompton

CU1-CU6 North West Cullompton

42. Contributions from development to the Town Centre relief road and Junction 28 are proposed as modifications to the policy. In-line with the adopted North West Cullompton masterplan a change to the total commercial floorspace is proposed. The re-allocation of land to the south west of the site is also proposed.

CU7-CU12 East Cullompton

43. An additional criterion is proposed to ensure the setting of listed buildings adjoining the site is respected.

CU19 Town Centre Relief Road

44. Two additional criteria are proposed to ensure the protection of the setting of listed buildings and conservation area, and the provision of archaeological investigation and mitigation.

CU20 Cullompton Infrastructure

45. An additional criterion to state 'provision of works to reduce flood risk' has proposed as a modification to the plan.

Crediton

CRE2 Red Hill Cross, Exhibition Road

46. Additional supporting text is proposed to reflect the recommendation in the HEA to provide appropriate mitigation for Shobrooke Park to the east.

CRE3 Cromwells Meadow

47. Additional supporting text is proposed to reflect the recommendation in the HEA to provide appropriate mitigation for Shobrooke Park to the east. An additional criterion is also proposed to ensure archaeological investigation and mitigation.

CRE4 Woods Group

48. Additional supporting text is recommended which identifies non-listed heritages within the site.

CRE5 Pedlerspool

49. Amendment to the policy is made which includes the provision of a new school but removes the extra care scheme element in the policy.

CRE7 Stonewall Lane

50. A change to the supporting text of the Plan is recommended to ensure that adequate landscaping is provided to protect the heritage assets associated with the adjoining Creedy Park.

CRE10 Land south of A377

51. A change to the policy is proposed to include a small area to the south of the allocation up to the edge of the swale, covered by recent consent sought by Mole Avon. Although the scoring is lower for the pre-mitigation score of objective c) mitigating the effects of climate change, it is considered appropriate and reasonable to allocate the original site area which has outline consent. Detailed design to mitigate flood risk will be considered at the reserved matters planning application stage. Mitigation through sensitive design with appropriate choice of materials and landscaping is also recommended for inclusion within the policy. An amendment to the supporting text is further proposed to make reference to the latest flood data and implications from redevelopment with mitigation measures such as layout, site and flood levels.

CRE11 Crediton Infrastructure

52. The following criterion is proposed for inclusion 'provision of works to reduce flood risk'.

Junction 27

Junction 27, M5 Motorway

53. An additional policy is proposed to reflect the Council decision on 22nd September 2016 to allocate land for tourism, leisure and retail at Junction 27 of the M5 motorway. Changes to the policy are reflected in the sustainability appraisal.

Rural Areas

School Close, Bampton

54. An allocation for 0.54(ha) 26 dwellings is proposed as a modification to the Plan. The site is currently allocated and was omitted in error as some of the site has been built out. For consistency, similar to other sites in the plan, the remaining area of the allocation which has not yet been built is proposed to remain as an allocation in the Plan.

CH1 Barton, Chawleigh

55. An additional criterion to state 'design solutions which respects the setting of the conservation area and listed building' is proposed. An amendment to the supporting text is also proposed to ensure appropriate landscaping to mitigate any potential impact on the conservation area and listed buildings.

CF1 Barnshill Close, Cheriton Fitzpaine

56. An additional criterion to minimise the impact on the conservation area and listed building is proposed.

HA1 Land adjacent Fishers Way, Halberton

57. An amendment to policy HA1 is proposed to delete reference to the need to 'archaeological investigations and appropriate mitigation measures' given the new information provided by the Devon County Council Archaeology Team that the proposed allocation will not impact on any known heritage assets and state that they would not need to be consulted should an application come forward. The addition of a criterion to ensure mitigation through appropriate design, materials and landscaping is proposed to protect the setting of Halberton conservation area is also proposed.

HE1 Depot, Hemyock

58. This site is proposed for deletion given the representations made during the Local Plan Review Proposed Submission (2015) consultation raises an issue with the deliverability of the site during the plan period and is therefore no longer considered a reasonable alternative. The site will have a limited impact on the Local Plan as a whole given its size of 10 dwellings and may still come forward as a windfall site as it falls within the settlement limit.

NE1 Court Orchard, Newton St Cyres

59. A change to the policy and supporting text is proposed to ensure design which respects the setting of the conservation area.

OSP1 Higher Town, Sampford Peverell (Proposed for allocation SP2)

60. This site is proposed to be allocated following the Council decision on the 22nd September to allocate land at Higher Town for residential development. Since the proposed submission SA there has been confirmation that access is achievable and therefore the uncertainty has been removed.

OUF3 Land west of Uffculme (Proposed for allocation UF1)

61. A change to the plan is proposed to allocate this site given a 2016 appeal decision (APP/Y1138/W/15/3025120) allowing outline planning permission for a site of 3.49ha with 60 dwellings. Conclusions in the inspectors report have fed into the sustainability appraisal in which objectives b) built and historic environment and h) ensuring community health and wellbeing score more positively.

WI2 Willand Industrial Estate

62. The full allocation of 9.2ha, 22,000sqm of commercial floorspace is proposed to be allocated given that the Council's original reasons for not allocating the full site have been addressed as the remainder of the site is now deliverable.

Managing Development

DM28 Other protected sites

63. The inclusion of reference to compensatory measures is proposed as a change to the policy to raise that in some cases where mitigation measures are not possible then compensatory measures may be appropriate.

Secondary/Cumulative/Synergistic impacts

Tiverton

64. Additional detail has been provided in the supporting text of S10 to reflect the cumulative traffic impacts on Junction 27 to be considered.

Cullompton

65. Additional criterion and supporting text has been included under a number of Cullompton allocation policies to reflect the cumulative impact on the road network.

Crediton

66. Additional text is provided in CRE7 is recognise the need for a Transport Assessment that will comprehensively assess the transport issues related to the development of the site, taking into account the potential cumulative impact of nearby allocations.

J27 Commercial Development

67. Additional evidence since the previous SA was commissioned specifically to examine the potential related housing implications of the proposed strategic scale employment site at Junction 27 on the M5 motorway. The results suggest a need of an additional 260 dwellings within Mid Devon District Council over the plan period. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.

Overall Sustainability of the Local Plan Review

68. In this latest update to the SA, changes to the Plan are proposed to take into account comments from representations, additional reasonable alternatives considered and new information presented including the latest national policy changes. Updates from the latest appeal decisions and planning applications have also been taken to account to ensure policies proposed are as up-to-date as possible.

69. Of the changes, the majority propose minor alterations to the proposed policies or supporting text. The main amendments to the Plan include the proposed allocation of land at Junction 27 of the M5 motorway and associated housing and an amended housing total to reflect the most recent evidence on the housing needs in the area. OSP1, Sampford Peverell (proposed as SP4 within the plan) and OTIV4, Blundells School (proposed as TIV16 within the plan) are proposed for allocation in response to the housing implications of allocating the strategic scale employment site at Junction 27 of the M5 motorway. The option to include Junction 27 presents a significant positive impact on promoting economic growth and employment. Controls are set in policy to ensure aspects such as retail development is supported, necessary infrastructure is delivered and housing need is met. As such overall it is considered to result in a positive impact on the plan.

70. Wynnards Mead, Tiverton (contingency site) is proposed for deletion due to new evidence provided in relation to issues around flooding and the historic environment. School Close, Bampton (proposed as BA4 within the plan) has been included, which was previously omitted in error. HE1 Deport, Hemyock is proposed for deletion due to an issue of its deliverability within the plan period. OUF3 Land West of Uffculme is also included as an allocation following a 2016 appeal decision (APP/Y1138/W/15/3025120), allowing outline planning permission for a site of 3.49ha with 60 dwellings. Also the full allocation of 9.2ha, 22,000sqm of commercial floorspace is proposed at Willand Industrial Estate given that the Council's original reasons for not allocating the full site have been addressed as the remainder of the site is now deliverable.

71. In general, the emerging Local Plan Review has been found to have a wide range of positive and significant positive effects on the objectives both cumulatively and through individual policies, although a number of potentially adverse impacts still remain. Recommendations made in previous iterations of the SA report and this updated SA report as well as controls through policy has provided mitigation for potential adverse effects. Of the main changes proposed in this iteration of the SA, the main negative impact on the Local Plan Review as a whole is the deletion of a contingency site (Wynnards Mead, Tiverton). The deletion of this policy reduces the flexibility of the Plan as a whole given the role of contingency sites in ensuring housing delivery during the Plan period. However on balance the sustainability issues of the site outweigh the benefit of the inclusion of the contingency site. Two other contingency sites in the plan remain and therefore flexibility still remains in the Plan. The other changes to the Plan are considered largely beneficial with the new information and therefore amount to an overall positive effect.

Annex 1 – Sustainability Appraisal text, methodology and cumulative impact comments

This annex sets out comments from the Local Plan Review Proposed Submission Consultation (2015) on the contents of the sustainability appraisal (SA) text, methodology and cumulative impacts.

Comments on Sustainability Appraisal text

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
1. *'Would like to see reference to NCN3 National Cycle Network Route no.3, Devonshire Heartland Way, the Little Dart Ridge & Valley Walk and the Tarka Trail.'*	Bampton Society (1319)	All public rights of way and cycling and walking routes are already noted with some examples provided. The suggested additional text adds unnecessary detail.
2. *'No evidence as to how the SA has used the Water Framework Directive in the appraisal of the plans policies.'*	Environment Agency (943)	The Water Framework Directive forms part of the sustainability considerations for objective D) Safeguarding and minimising resource use as set out on p.28 of the SA. It has also been considered as part of the Strategic Flood Risk Assessment which has informed the SA.
3. *'Paragraph 2.4 provides little reference to Green Infrastructure.'*	Environment Agency (943)	The comment is noted and the following sentence is proposed as an addition to paragraph 2.4. *'Green infrastructure is a network of multi-functional green space, urban and rural which is capable of delivering a wider range of environmental and quality of life benefits for local communities.*'
4. *'Paragraph 2.30 should include white clawed crayfish as a species of particular note in Mid Devon.'*	Environment Agency (943)	The comment is noted and the following sentence is proposed as an addition to paragraph 2.30. '*Mid Devon is also home to white clawed crayfish. It includes the only two remaining populations of this species in Devon, representing the furthest south-west UK*

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
		distribution.'
5. *'Paragraph 2.58 should consider the SUDs hierarchy and their multi-functional potential.'*	Environment Agency (943)	The comment is noted and the following sentence is proposed as an addition to paragraph 2.58. The proposed change also recognises national policy changes. *'From 6 April 2015, all major development will have to incorporate sustainable drainage to manage surface water runoff, unless demonstrated to be inappropriate. Devon County Council as the Lead Local Flood Authority in the area is the statutory consultee on major planning applications for surface water management. SuDs are designed to mimic the natural drainage of surface water by managing rainfall close to the site where it falls. The SuDs hierarchy should be considered when drawing up options for SuDs in which in general soft landscape SuDs are preferred which also provide other multi-functional potential e.g. green infrastructure.'*
6. *'Paragraph 4.4 refers to 7,200 dwellings as objectively assessed need indicated by the SHMA. SHMA provides a range of figures therefore 7,200 is the 'policy on' figure and not objectively assessed need. Would welcome clarification'.*	Devonshire Homes Ltd c/o Jillings Hutton (1050); Pemberton Hutton Developments c/o Jillings Hutton (5786); Mr R Persey C/O Jillings-Hutton	The 7200 figure reflected the latest SHMA evidence at the time of the proposed submission Local Plan Review publication. An update to the SHMA provides a final objectively assessed housing need (OAN) mid-range figure of 380. As such the OAN of the district has been increased to 7600 in response to this new evidence. An addition of

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
	(4654)	260 dwellings is proposed in response to the proposed allocation of a strategic scale employment site at Junction 27. The figures are therefore proposed to be amended to a total of 7860 dwellings equating to 393 dwellings per annum. Alternatives for the amount of housing development are set out in annex 2.
7. *'SA vision and objectives reflect aspirations of local community, the Council and the ambitions of the NPPF.'*	Pegasus Planning (3678)	Support noted. No changes to the SA required.
Summary		
Additions to the text of the SA are proposed to add context to the report and reflect the most up to date information.		

Comments on the Sustainability Appraisal methodology

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
General methodology comments		
1. A comment was made which argued that the *'scoring of the SA is subjective.'*	Mr Christian & Mr Force & Mr Christian C/O Genesis Town Planning (3780)	The scoring is based on professional planning judgements using the best available evidence at the time of the Sustainability Appraisal. Some level of subjectivity is recognised in the Mid Devon Sustainability Appraisal methodology. However to ensure as much consistency as possible, when scoring proposed site allocations an appraisal guidance was followed as set out on p.191 of the 2015 Proposed Submission Local Plan Review SA.
2. A comment was made which argued that the *'scores in the SA ignore the absolute size of the site alternatives which must distort their impact e.g. larger sites should have a bigger impact than smaller sites.'*	Mr Christian & Mr Force & Mr Christian C/O Genesis Town Planning (3780)	The SA is a tool to understanding the sustainability of a site or proposal. It also provides the opportunity to compare alternatives however context should be considered when interpreting the SA findings. For example, strategic sites were compared against other alternative strategic sites whereas small rural sites were compared against other alternative small rural sites. A single small scale rural site would not be seen as an alternative to a strategic allocation.
3. A comment was made which stated that the *'SA does not comment on site deliverability in terms*	Mr Christian & Mr Force & Mr Christian C/O Genesis	The SA is one tool to assess the sustainable performance of a proposed policy or proposal and does not cover all

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
of phasing and meeting housing need.'	Town Planning (3780)	elements to be considered in deciding preferred policies/proposals. The site options presented in the SA have been through a SHLAA panel which has considered their deliverability in principle. Undeliverable sites are referenced in appendix 3.
4. A comment was made which suggested that the *'the total scores should be summed to produce a total score which will allow comparisons between total scores.'*	Individual (4447)	The aim of the SA is to identify and respond to significant effects on various objectives. As noted in paragraph 3.10, the reason stated for not providing the total scores is because this can lead 'artificial certainty' in determining the effect of a policy or proposal where the impacts of issues can be complex. This is endorsed by the Planning Advisory Service.
5. A comment was made which argued that the *'post-mitigation score is unreliable and unrealistic'.*	Individual (4447)	The aim of the SA is to identify and respond to significant effects on various objectives. Reasons for post-mitigation score are provided under the mitigation heading in the SA tables. Where there is an element of uncertainty this has been recognised through '?' within the table itself, this approach is common in sustainability appraisal work. The scoring is based on professional planning judgements using the best available evidence at the time of the Sustainability Appraisal.
6. Representations were made for the following sites:	Individuals (4447, 5208, 4106, 5234, 4081, 5263,	No change to the SA. It is a regulatory requirement to appraise alternative options.

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
• OHA1 Land at Blundells Road, Halberton • OMO1 Tatepath Farm, Morchard Bishop' • OMO2 Church Street, Morchard Bishop (locally known as the Gurneys) In which the representations supported the exclusion of the site but request it be removed from the SA as an alternative option.	4117, 5295, 3971, 4082, 4416, 4459, 5642, 5641, 4093, 5604, 5605, 5606, 5607, 5608, 4474, 4473, 5609, 4476, 4108, 4111, 4112, 5603, 4460, 4152, 4110, 4481, 4475, 5599, 4101, 4363, 5594, 4105, 5597, 5598, 5600, 4471, 4472, 5592, 5593, 4077, 4074, 5595, 5596, 5601, 6063, 4212, 4215, 4681, 4682, 4075, 5590, 5591, 5586, 5587, 5588, 5589, 4076, 5358, 4356)	
7. A question was raised regarding the amendment to the scoring of the objectives in the proposed submission SA when compared to the options stage SA. Specific comments made to this regard on objectives A, D and H' of OHA1 Halberton, Land at Blundells Road.	Individual (4447)	Comments were invited on the sustainability appraisal at the Options consultation stage 2014. The SA is an iterative process which is updated as new evidence arises. Amendments were made to the SA to respond to the representations accordingly. Comments included local knowledge of existing sites. Comments were also made on the need for consistent scoring throughout the SA based on similar parameters e.g. scoring similar locations equally

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
		across Mid Devon. As such the methodology was strengthened by setting out guidance for appraising site allocations (p.192) to ensure consistent scoring throughout the amended SA. This has resulted to amendments to some commentaries and scoring throughout the SA.
Policy specific methodology comments		
S2 Amount and Distribution of development		
8. A comment was made which noted that *'two alternative options for villages were considered as 1,600 and 1,040 scenarios. The Local Plan Review considers 720 with no justification.'*	Devonshire Homes Ltd c/o Jillings Hutton (1050); Pemberton Hutton Developments c/o Jillings Hutton (5786); Mr R Persey C/O Jillings-Hutton (4654)	The two alternative scenarios in the options Local Plan Review consultation were based on the most recent available data at that time which was a figure greater than the objectively assessed need. A SHMA update provided an interim figure of 7,200 dwellings to meet the objectively assessed need (OAN). As a result the total housing need figure was reduced from 8,400 to 7,200 dwellings in the proposed submission report with the rural distribution reduced proportionately in line with the reduction in total figure. Along with this change, further site specific evidence across Mid Devon District resulted in amended distribution figures to reflect the most recent evidence available. The SHMA figure has been further amended in a final iteration of the document in which a concluded 7,600 dwellings has been considered for Mid

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
		Devon, an additional 260 dwellings is proposed in response to the strategic employment allocation at Junction 27 with amended distribution figures to follow.
CU14 Ware Park and Footlands, CU15 Land at Exeter Road & CU21 Land at Colebrook Contingency Site		
9. A comment was made which noted that they *'object to allocation [CU14] as sustainability appraisal scoring for site is less than CU21 Colebrook and therefore this site should be contingency instead, with CU21 as full allocation….SA and allocated sites at Cullompton do not correlate. Total scores of CU14 and CU15 are less positive than CU21'.*	Mr Christian & Mr Force c/o Genesis Town Planning (3780)	As set out on p.28 para 3.10 of the SA scores should not be summed to produce a total score to determine the overall sustainability of a policy or proposal. Mathematical models can lead to an 'artificial certainty' in determining the effect of a policy or proposal where the impacts of issues can be complex. This is endorsed by the Planning Advisory Service. It is also important to note that the SA is one tool for decision making and does not cover all elements to be considered in deciding preferred policies/proposals. Bearing this in mind, CU21 is of an appropriate scale required to be effective as a contingency site, it scores more positively on objective E) promoting economic growth and employment and G) meeting housing needs predominantly due to its size. CU14 and CU15 are not comparable to CU21 in size in which they are not of a scale which would provide the quantum of development required to be effective as a contingency site. CU21 is still considered deliverable hence its proposed allocation as a

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
		contingency site but it is not allocated as one of the main sites for Cullompton as other allocations are strategically preferable.
CF2 Land adjacent School and OCF2 Landboat Farm		
10. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Disagree with comparison of site OCF2 'Landboat Farm' with CF2 'Land adj school'. States SA should be comparing new sites outside the current settlement boundary, and exclude any parts of sites within the boundary'.*	Garside Planning Services (3645)	The SA appraises the potential benefits and impacts of all sites put forward for development. It would be inappropriate to exclude a part of a site on the basis that it lies within the settlement limit as this would lead to an incomplete analysis of benefits/impacts, and preclude opportunities to recommend mitigation. Such omission could also potentially leave the local authority at risk of not fulfilling the regulatory requirements set by the EU Strategic Environment Assessment directive to fully assess the impact of plans and proposals. No change to the SA is proposed.
Summary		
It is considered that none of the comments made would result in any changes to the Sustainability Appraisal for reasons set out in the 'Impact on the Sustainability Appraisal' column above.		

Comments on secondary/ cumulative/ synergistic effects

The comments in the table below are considered to update the cumulative effects noted in appendix 2 and 3 of the Local Plan Review Proposed Submission sustainability appraisal (2015).

Comment	Comments made by (customer ID in brackets)	Impact on the Sustainability Appraisal
Tiverton		
1. A comment was made on strategic policy S10 Tiverton which stated the following: *'support strategy in general, however further work is needed on the transport evidence in relation to the SRN. There should be reference to the cumulative impact of development on the M5'.*	Highways England (1172)	The cumulative impact of developing at Tiverton was previously identified in the SA in the cumulative/secondary/synergistic effects section of the proposed allocations in terms of identifying the potential to impact upon traffic. However the comment made is specific to J27, in response to this additional detail is provided to the supporting text of the plan under policy S10.
OTIV2 Hartnoll Farm		
2. A comment was made which stated the following: *'object to exclusion – site could provide substantial proportion of Tiverton and district's housing need. New junction designed to accommodate up to 2000 dwellings'.* While it may be possible for the proposed grade	Waddeton Park Ltd (3815) and officer comment.	The Blundells School site is proposed to be allocated in the Local Plan Review as a modification to the plan for 200 dwellings. The provision of a junction on Heathcoat Way and a safeguarded road route through the site to serve as a future second strategic road access for development at Tiverton eastern urban extension is proposed in the draft policy. This enables mitigation for any future cumulative

separated junction onto the A361 to accommodate up to 2000 dwellings, the allocation commented on would take the number of new dwellings to the East of Tiverton to well in excess of 2000. This would necessitate the relief road behind Blundells School. Although this need was recognised in previous iterations of the SA, it did not clearly set out that the requirement for this relief road would be due to this cumulative effect of additional development in excess of 2000 dwellings to the East of Tiverton.		impacts of potential additional development to the East of Tiverton. Without the relief road further allocation which cumulatively would result in excess of 2000 dwellings to the East of Tiverton would lead to unacceptable impacts on Blundells Road and the village of Halberton.
Cullompton		
3. The SA recognised the potential cumulative impact on the road network of developing at Cullompton. Some policies had reflected this impact through additional criterion in policy. Since the Local Plan Proposed Submission (2015) the highway authority has provided more information regarding the cumulative impact on the highway network.	Officer comment	In response to this various policies have included additional criterion to reflect this cumulative impact including CU6 North West Cullompton phasing, CU13 Knowle Lane, CU14 Ware Park and Footlands, CU15 Land at Exeter Road, CU16 Cumming Nursery, CU17 Week Farm and CU18 Venn Farm.
Crediton		
4. The SA did not previously fully consider the impact on Crediton high street through	Officer comment	The cumulative impact of developing to the west of the town was not previously clearly identified in the SA in

developing on the west of the town. Developing on the west would increase traffic through the high street as most likely destinations for journeys are either Exeter or Tiverton. Whilst some mitigation could be provided, the impact of developing sites on the east side of the town is likely to be much lesser than any on the west.		which incremental development in the west of the town will have a cumulative negative effect on the traffic through the high street with a secondary impact on air quality. This would impact the scores for the preferred alternative CRE9 Alexandra Close, alternative OCRE10 Westwood Farm and OCRE11 Land at Chapel Down Farm given their context to the west of the town. The amendments to scoring for these alternatives are discussed in annex 2.
CRE5 Pedlerspool and CRE7 Stonewall Lane		
5. A representation was made during the Local Plan Review noted the need *to 'cumulatively assess the transport impacts of CRE5 and CRE7'.*	MJ Gleeson c/o Bell Cornwell LLP (3775)	The plan already recognises the potential for cumulative transport impacts in CRE5 however this is not set out clearly in CRE7, therefore in response to this representation a change to the Plan has been proposed to include in the supporting text of CRE7 the need for a Transport Assessment, which comprehensively assesses the transport issues related to development of the site, taking into account the potential cumulative impact of nearby allocations.
OJ27 Commercial Development		
6. The SA did not previously fully consider the secondary effect of requiring additional housing to be allocated in response to the creation of	Officer comment	OJ27 Commercial Development would require additional housing to be allocated in response to the creation of additional jobs. This should be considered alongside any

additional jobs as set out in para 159. of the NPPF and supporting paragraph in the NPPG.		additional commercial development proposed at OJ27.
7. A Habitat Regulations Assessment update of the Local Plan Review including the Junction 27 option is required.	Officer comment	A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.
Summary		
The comments set out in this table identify cumulative/secondary/synergistic effects which were not previously clearly set out in the Proposed Submission SA. The impacts of note include the addition of a criterion in the proposed allocation Blundells School to enable mitigation for any potential future development to the East of Tiverton. The cumulative negative effect on traffic through the high street in Crediton and secondary effect on air quality from incremental development in the west of the town. The need for a transport assessment associated with CRE7 Stonewall Lane to take account of the potential cumulative impact of nearby allocations and the secondary impact of allocating OJ27 Commercial Development in which additional housing will be required in response to the creation of additional jobs.		

Annex 2 – Further reasonable alternatives, new information and comments on the sustainability appraisal of policies and sites

The level of detail provided in the updated assessment of reasonable alternatives, new information and comments on the sustainability appraisal of policies and sites is correlated with the significance of the alternative proposed. A breakdown of the types of alternatives considered in this annex along with the level of detail of the updated assessment that might be expected is provided below.

Alternatives considered	Full Appraisal	Summary Matrix
Distinct alternatives: where alternatives are distinct from the preferred policy. Full appraisals are provided in annex 3. A summary matrix is also provided under each policy where relevant.	✓	✓
Indistinct alternatives: where alternatives are indistinct. Full appraisals are not provided unless three or more objectives of the SA are proposed to be amended. A summary matrix is provided under each policy where relevant.	✓/×	✓
New information: where new information is presented this has been discussed in the tables throughout this annex. The detail of the updated SA assessment will depend on the significance of the new information proposed.	✓/×	✓
Deleted Policies: where policies are proposed to be deleted, the impact on the sustainability of the Plan is discussed within the relevant table in this annex.	×	×
SA amendments: all comments made on the SA with regard to the Local Plan Review Proposed Submission policies are discussed in this annex.		
• Where no change to the SA is proposed a full appraisal/summary matrix has not been provided. The reason for no change is fully discussed in the tables in this annex.	×	×
• Where there are two or fewer changes proposed to the post-mitigation score, summary matrices are provided. Full appraisals are not provided; reasons for the changes to the SA are fully discussed within the tables in this annex.	×	✓
• Where three or more amendments are proposed to the post-mitigation score a summary of the changes are discussed within the tables in this annex along with a summary matrix. Full appraisals are provided in annex 3 which set out the impact in more detail.	✓	✓

Examples of alternatives that are not considered in this annex are provided below:

Alternatives not considered
Previous alternatives: alternatives that have been previously considered as part of previous iterations of the SA have not been reconsidered in this annex unless amendments have been suggested for that alternative.
Minor alternatives: alternatives proposed which would not give rise to any impact on the SA scoring.
Non-specific alternatives: alternatives suggested which are insufficiently detailed to assess the impact on the SA.
Other SA amendments: suggested changes to the SA text, methodology, secondary/ cumulative/ synergistic impacts are discussed in annex 1.
Unreasonable alternatives: where the suggested change would not be possible or would be unreasonable to implement.

Strategic Policies

S1 Sustainable Development Principles

Two comments under S1 are considered to give rise to an alternative to be considered in this annex. Although comments were made on S1, both comments would result in a rural focussed alternative option for the distribution of development which is considered under S2 in this annex.

S2 Amount and Distribution of development

Reasonable Alternative Proposed (Amount Housing)	Impact on the Sustainability Appraisal
A variety of alternatives have been proposed by representations for housing development these range from 7400 and 8860. To enable meaningful comparisons to be made the following alternatives of 7200, 7600, 8000, 8400, 8800 have been considered with full assessments set out in annex 3 and summary matrices provided below. An alternative of 7860 has also been considered which is the Council's preferred option for the amount of housing development and is proposed as a modification to the plan. This is to reflect the updated evidence to meet the objectively assessed need of 7600 in the District and the preferred strategy of allocating commercial development at J27, of which an addition of 260 dwellings is proposed to reflect the projected job growth as a result of the commercial proposals at J27.	
1. A lower growth alternative of 7200.	This was previously appraised as part of the Proposed Submission Local Plan in which this figure was believed to meet the objectively assessed need. New evidence has demonstrated that this figure would not meet this need; as such this would result in a lower growth scenario. Whilst this scenario would meet a large proportion of the housing needs of the district it would not meet the whole need and therefore a positive rather than significant positive impact is considered for objective G) meeting housing needs. All other objectives considered in the SA score the same as the 'meet the

	housing need' alternative of 7600.
2. A meet the housing need alternative of 7600.	This alternative scores more positively on all objectives in comparison to other alternatives. It has the same scoring as the previous preferred alternative 7200 in the Proposed Submission SA as this was previously thought to meet the objectively assessed need. The scoring of the 7200 alternative now scores lower for objective G) meeting housing needs as explained above.
3. Preferred alternative: A meet the housing need alternative 7600 with Junction 27 additional housing requirements of 260, a total of 7860.	The sustainability of this alternative is considered to fall between the alternatives 7600 and 8000. The proposed change to the housing amount is not considered significant enough to enable a meaningful comparison; as such it is considered that the alternative of 7860 will score the same as alternative 2. Given the similarities of this alternative to 7600, no additional full appraisal has been provided in annex 3. This alternative meets the objectively assessed housing needs and does not score lower in objective I) (as reflected for the intermediate higher growth alternative of 8000) because the proposed additional sites for development have been set out at Blundells School, Tiverton and Higher Town, Sampford Peverell respectfully and it is considered that infrastructure required for the additional sites can be provided in-step with development. For completeness although this alternative scores the same as alternative 2 a full appraisal is provided in annex 3.
4. An intermediate higher growth alternative of 8000.	This alternative has a lower score in comparison to the preferred alternative for objective I) delivering the necessary infrastructure in which it may be more difficult to distribute development between the

	towns while delivering the necessary infrastructure in-step.
5. A higher growth alternative of 8400.	In comparison to the preferred alternative this scenario would result in a slight negative effect for objective A) protection of the natural environment where a higher growth scenario may be more difficult to distribute across the district whilst avoiding environmental impacts on the landscape. A significant negative effect for objective D) safeguarding and minimising resource use in which this option is likely to require further greenfield developments and a negative effect for objective I) delivering the necessary infrastructure where a higher growth scenario is also likely to be more difficult to distribute across the district while delivering the necessary infrastructure.
6. An elevated higher growth alternative of 8800.	In comparison to the preferred alternative, this scenario would result in a negative effect for objective A) protection of the natural environment where a higher growth scenario may be more difficult to distribute across the district whilst avoiding environmental impacts on the landscape and in this scenario the additional development would be of an equivalent scale to a strategic allocation. A significant negative effect for objective D) safeguarding and minimising resource use in which this option is likely to require further greenfield developments and a negative effect for objective I) delivering the necessary infrastructure where a higher growth scenario is also likely to be more difficult to distribute across the district while delivering the necessary infrastructure.
Reasonable Alternative Proposed (Distribution Housing)	
7. A rural distribution alternative.	A rural distribution alternative has appraised with a full appraisal

	A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'the policy should reduce the Cullompton target to 1,500 dwellings and increase the Rural Areas target to 2,820 dwellings.'* A comment was also made on the SA which commented that the SA *'should have a distribution scenario of a wider distribution to the larger villages.'* In response to these representations a rural distribution alternative has been appraised. An alternative to *'increase the amount of development at Crediton and rural areas whilst reducing the amount in Cullompton as major development sites are risky'* was also suggested. To respond to this comment, an alternative of removing East Cullompton leading to a redistribution of 2100 dwellings in Crediton and across rural areas was considered. As the maximum capacity of Crediton is 1047 based on the highest capacity of all potential allocation sites submitted through the SHLAA this would only provide an addition of 327 dwellings at Crediton with the remainder distributed in rural areas. Therefore this scenario would result in the same SA outcomes as the 'rural distribution' alternative and therefore has not been appraised as a separate alternative.	provided in annex 3 and a summary matrix provided below. The findings of this SA show that this would lead to greater negative effects in objectives: A) natural environment, B) the built and historic environment, C) climate change, E) promoting economic growth and employment, H) ensuring community health and wellbeing and I) delivering the necessary infrastructure. A slightly less negative score was considered for objective D) safeguarding and minimising resource use as the majority of the village allocations were identified as grade 3 agricultural land rather than grade 1 or 2, although a negative effect overall remains for this objective.
8.	A Tiverton and Crediton focussed alternative. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'the distribution*	A Tiverton and Crediton focussed alternative has appraised with a full appraisal provided in annex 3 and a summary matrix provided below. In comparison to the preferred option, this would result in a greater

	should be altered to reduce Cullompton provision to reflect the removal of the East Cullompton proposal and Crediton should be increased to reflect its size. Difficulties of bringing forward sites such as the East Cullompton one are well known. Crediton has scope for additional development'. The removal of East Cullompton implies a target of 1500 at Cullompton and 2820 at Crediton which is not a reasonable alternative as there is not the quantum of sites available in Crediton to deliver this option. The maximum capacity for Crediton based on taking the highest capacity of all potential allocation sites submitted through the SHLAA is 1047 dwellings. As an alternative to the rural distribution alternative (discussed above), a Tiverton and Crediton focussed alternative with greater development in rural areas has been considered.	negative impact in objectives: A) natural environment, B) built and historic environment, E) promoting economic growth and employment. The option scores slightly higher in F) supporting retail and H) ensuring community health and wellbeing.
9.	A Town focussed alternative. A representation was made during the Local Plan Review Proposed Submission consultation and suggested the following distributions: *Tiverton – 3510* *Cullompton – 2730* *Crediton – 780* *Rural Areas – 780* *Total – 7800* The distribution of this representation is very similar to that	No change.

previously appraised under the 'town focus' option albeit with different total development proposed. Alternatives for the total development have been considered separately in this table with a summary matrix provided below. The original summary matrix for the 'town focus' alternative has also been provided below for information.	
Reasonable Alternative Proposed (Amount Commercial)	
10. Higher Growth Scenario including J27 option With the addition of a strategic scale employment site at junction 27 on the M5 motorway the higher commercial growth scenario has been reappraised. This scenario takes into account the opportunities provided by the Junction 27 option. A full appraisal the higher growth scenario including the J27 option is provided in annex 3. The site specific appraisal of the junction 27 option is provided in the allocation section of this annex. No other alternatives are available and deliverable that could accommodate the quantum development proposed.	Given this option is intricately linked with the proposed Junction 27 allocation modifications option, the scoring for this alternative is the almost identical as the Junction 27 site appraisal with the exception of objective H) ensuring community health and wellbeing as well considering the policy as a whole, the option enhances existing policy as it broadens the potential use classes including development for healthcare, education and public facilities, overall it therefore scores positively.
New Information	
11. New information was made available during the consultation on the Local Plan Review Proposed Submission. Upon review, it is proposed to increase the objectively assessed housing need to 380 per year to reflect the advice in the SHMA.	As noted above, this alternative to 'meet the housing need' would result in the same SA scores as previously anticipated for the previously considered OAN 7200. The previously considered OAN of 7200 now scores lower in objective G) meeting housing needs, as whilst this scenario would meet a large proportion of the housing needs of the district it would not meet the whole need, and therefore

	a positive rather than a significant positive impact is considered for this objective.
12. Additional evidence since the previous SA was commissioned specifically to examine the potential demographic implications of the proposed strategic scale employment site at junction 27 on the M5 motorway. The results suggest a need of an additional 260 dwellings within Mid Devon District Council over the plan period.	In response to this new information a meet the housing need alternative of 7600 with an additional 260 in response to the inclusion of a strategic scale employment site at junction 27 of the m5 has been considered. This would result in an alternative of 7860 dwellings which has been considered above.
Sustainability Appraisal Comments	
13. A representation was made during the Local Plan Review Proposed Submission consultation and commented that *'8,400 dwellings shouldn't trigger a slight negative effect on the environment when 7,200 dwellings have a neutral effect'.* Devonshire Homes Ltd c/o Jillings Hutton (1050); Pemberton Hutton Developments c/o Jillings Hutton (5786); Messrs Persey and Harding c/o Jillings-Hutton (4654)	The scores are in the context of the policy. In this case, it is based on development figures. To enable meaningful comparison between the options for policy S2 it was judged that when comparing 7,200 dwellings with 8,400 dwellings in terms of overall growth of the district, the provision of an addition of 1,200 dwellings would have a slightly more negative effect. No change to the SA is proposed.
14. A representation was made during the Local Plan Review Proposed Submission consultation and commented that *'Benefits of 'supporting retail' in having more houses and therefore more spending power is not highlighted in relation to higher growth scenario'.* Devonshire Homes Ltd c/o Jillings Hutton (1050); Pemberton Hutton Developments c/o Jillings Hutton (5786); Messrs Persey and Harding c/o Jillings-Hutton (4654)	It was judged that as the impact on supporting retail would be a secondary impact, the significance of increasing dwellings in relation to a higher growth scenario in comparison to the preferred scenario did not warrant an increased retail score. However it has been recognised for all alternatives that the overall provision of 7200 dwellings and above would have a slight positive effect on objective F) supporting retail, as this would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres. No change to the SA is proposed.
15. A representation was made during the Local Plan Review Proposed Submission consultation and commented that they	Comment is noted, no change to the SA is proposed.

'Support the conclusions of the SA that the most appropriate growth strategy is to focus development in sustainable urban locations rather than seeking growth in larger villages'. Pegasus Planning (3678)	
16. A representation was made during the Local Plan Review Proposed Submission consultation and commented that *'The SA recognises the level of supply is not anticipated to meet the need for affordable housing. Therefore deliverable sites should be seriously considered'.* Devonshire Homes Ltd c/o Jillings Hutton (1050); Messrs Persey and Harding c/o Jillings-Hutton (4654)	Comment on the proposed submission SA has been noted. A change to the Plan is proposed in which the overall target is proposed to be increased to 7,860, which would yield 110 affordable dwellings per year at 28%. The SHMA forecasts a need of 124 affordable dwellings per year, which it is accepted should be reflected in the local plan text. It is highly likely that the Council and its housing association partners will be able to provide at least 20 additional affordable dwellings per year through non-planning actions such as investment from the HCA, exceptions sites and delivery on council owned land and meet the affordable housing need. Alternatives for the amount of residential development are discussed above.
17. A representation was made during the Local Plan Review Proposed Submission consultation and commented that 'Two alternative options for villages were considered as 1,600 and 1,040 scenarios. The Local Plan Review considers 720 with no justification'. Devonshire Homes Ltd c/o Jillings Hutton (1050); Pemberton Hutton Developments c/o Jillings Hutton (5786); Messrs Persey and Harding c/o Jillings-Hutton (4654)	The total housing figure in the 'options Local Plan Review consultation' was based on the most recent available data at that time. More recent evidence at the time of publication resulted in a reduced total housing figure of 8,400 to 7,200 dwellings. The distribution to rural areas was also reduced proportionately relative to the total housing figures along with further site specific evidence which affected the distribution figures. The SHMA figure has been further amended in a final iteration of the document in which a concluded 7,600 dwellings have been considered for Mid Devon with amended distribution figures to follow. No additional changes to the

	SA are proposed.
Changes to the Plan	
Amount of development (housing) Alternative 3 is suggested as a modification to the plan which would result in a 7,860 dwelling target. This alternative is preferred as new information in the finalised SHMA report which became available during the consultation on the Local Plan Review Proposed Submission resulted in new evidence, providing a final objectively assessed housing need (OAN) 380 per year. It is therefore agreed the target will need to be increased to 7,600 to meet the OAN of the district. As a result, the previously proposed approach of 7,200 dwellings over the plan period is no longer preferred as this approach would not meet the OAN of the district. In response to the proposed allocation of a strategic scale employment site at Junction 27, an additional 260 dwellings are required within Mid Devon over the plan period. As such a total of 7,860 dwellings is preferred. All other alternatives proposed recommend some form of higher growth scenario. All other higher growth scenarios would result in reduced scoring in the SA. At the intermediate higher growth level there is likely to be a lower score on objective I) delivering the necessary infrastructure. At the higher and elevated growth levels greater negative impacts are felt on objectives: A) natural environment, D) safeguarding and minimising resource use as well as I) delivering the necessary infrastructure. Furthermore arguments provided in representations for the higher growth scenarios are based on the opinion that the higher figures proposed are the accurate OAN, this is not agreed. 7,600 is the objectively assessed need as demonstrated by the updated SHMA evidence. The housing implications of the development of a strategic scale employment site at junction 27 on the M5 motorway has been considered in the August 2016 'Mid Devon Scenarios Policy-on' report of which the results suggest a need of an additional 260 dwellings within Mid Devon District Council over the plan period. All other higher growth scenarios are not supported by evidence, or considered beneficial and therefore are not preferred. Distribution of development None of the proposed alternatives are favoured. The rural distribution alternative would lead to greater negative impacts on almost all sustainability appraisal objectives, would result in unsustainable travel patterns and would be contrary to NPPF advice (para 30). Other alternatives consider scenarios which provide a greater focus in Crediton. One option results in a Crediton and Tiverton focussed scenario.	

Implicit in this scenario is the strategic growth to the east of Tiverton in addition to the Tiverton Eastern Urban Extension along with additional growth in rural areas. This alternative would result in a greater negative impact on the objectives: A) natural environment, B) built and historic environment and E) promoting economic growth and employment. It is therefore considered that the alternatives proposed would be less sustainable options and therefore not preferred.

Amount of development (commercial)

Alternative 10 is proposed as a modification to the plan. The option has a number of positive benefits including promoting economic growth and employment, supporting retail and providing the necessary infrastructure which could benefit the wider community.

New information

Alternative 11 represents the new information that has resulted in the consideration of alternative 2 in which a 7,600 dwelling target is considered as the objectively assessed housing need as explained above. Alternative 12 represents the new information that has resulted in the consideration of alternative 3 and the preferred option.

Sustainability appraisal comments

None of the comments are agreed therefore no changes to the SA scores are proposed.

S3 Meeting housing needs

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. 35% affordable housing target. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'the affordable housing target should be 35% reflecting need'*.	This alternative would help provide the supply of affordable housing sooner and therefore has a positive effect on providing housing however the score for objective G) meeting housing needs remains the same as +3 is the maximum score provided. This alternative would however result in a greater negative effect on objective I) delivering the necessary infrastructure in comparison to the preferred policy given that no CIL could be levied within the lowest land valued areas. Although there is potential this could be levied in the upper end sales values in towns and rural areas. Some of the key infrastructure in the towns set out in the Mid Devon Infrastructure Plan which are not set out in the proposed strategic allocations (which are to be provided via S106 rather than CIL) would not be provided as part of CIL. Overall the difference in score in comparison to the preferred alternative is a -1 score for objective I) delivering the necessary infrastructure.
2. Remove the requirement to provide 5% of serviced dwellings. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'there is no quantified need for self build. It is unclear that selfbuilders will wish to purchase plots on larger housing estates. There are practical challenges eg times of working associated with selfbuilders on a larger housing site. The requirement to provide 5% should be removed.'*	The alternative of not requiring 5% of serviced dwelling plots for self-buildings would reduce the SA score for meeting housing needs to a negative effect given that it would be unlikely that service plots would be provided if this requirement was not within the policy. Therefore there would be less housing mix and consequently a reduced SA score is considered. This is however identified as uncertain as the alternative suggests only removing part of criterion d) and therefore the inclusion of the rest of the criterion may lead to some serviced

	plots for self-building. Overall the difference in score in comparison to the preferred alternative is a +2/? score for objective G) meeting housing needs.
Distribution of gypsy and traveller pitches	
3. Town focussed urban extensions A representation was made during the Local Plan Review Proposed Submission consultation which *'Gypsy and Traveller Accommodation Assessment does not justify allocations on particular sites'.* In response to this representation alternatives for the general distribution of development have been considered. A town focussed urban extension approach is assessed here and a rural distribution new sites approach in defined villages is set out below. Summary matrices are provided below with full assessments in annex 3.	This is the preferred option in the Local Plan Review. The option scores a neutral or positive score for all sustainability objectives with the exception of objective D) safeguarding and minimising resource use which scores a slight negative score. In comparison to the rural distribution alternative for traveller pitches the town focussed approach scores more positively and therefore is preferred.
4. Rural distribution new sites in defined villages. A representation was made during the Local Plan Review Proposed Submission consultation which *'Gypsy and Traveller Accommodation Assessment does not justify allocations on particular sites'.* In response to this representation alternatives for the general distribution of development have been considered. A rural distribution of new sites approach in defined villages is assessed here and a town focussed urban extensions approach is set out above. Summary matrices are provided below with full	In comparison to the preferred town focussed urban extensions approach this option scores more negatively on the sustainability objectives and therefore is not preferred.

assessments in annex 3.	
New Information	
5. New information was made available during the consultation on the Local Plan Review Proposed Submission. Upon review, it is proposed to increase the objectively assessed housing need to 380 per year to reflect the advice in the SHMA resulting in an OAN of 7600 dwellings. In addition, 260 dwellings is proposed in response to the policy-on scenario of including the option of a strategic scale employment site at junction 27 on the M5 motorway resulting in a total of 7860 dwellings.	This alternative would result in a change to S2 (please see comments in S2 for full details) with a change in the total and annual number of dwellings referenced in S3. No change is proposed to the SA in response to this change.
Changes to the Plan	
Alternative 3 is the preferred approach currently promoted by the Local Plan Review therefore no change is required. Alternative 5 is suggested as a modification to the plan which would result in a 7,860 dwelling target (reasons are provided in S2), this would result in no change to the SA of S3. All other alternatives are not considered beneficial and therefore are not preferred.

S4 Ensuring housing delivery

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Delete the policy. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'the contingency sites should be allocated to meet housing need, and*	The deletion of this policy would lead to a weakened plan in which there would be no strategic policy to ensure housing delivery. This policy enables action if expected delivery falls significantly below the annual target set out in policy S3. Overall without this policy it would

therefore this policy is unnecessary and should be deleted.'	result in a less flexible and sustainable plan as it suggests a higher growth scenario with no flexibility. The impact of higher growth scenarios are discussed under S2.
New Information	
2. New information was made available during the consultation on the Local Plan Review Proposed Submission. Upon review, it is proposed to increase the objectively assessed housing need to 380 per year to reflect the advice in the SHMA. In addition, 260 dwellings is proposed in response to the policy-on scenario of including the option of a strategic scale employment site at junction 27 on the M5 motorway resulting in a total of 7860 dwellings.	This alternative would result in a change to S2 (please see comments in S2 for full details) with a change in reference in S4 including the defined action levels. It would not result in a change in the SA score for S4 as the mechanism to ensure housing delivery would remain the same.
Changes to the Plan	
Alternative 2 is suggested as a modification to the plan which would result in a 7,860 dwelling target (reasons provided in S2). This would result in amendments in S4 which have reference to the overall dwelling target, including the table which sets out the defined action levels however this would result in no change to the SA score as the mechanism to ensure housing delivery would remain the same. Alternative 1 suggests the deletion of the policy with the justification based on allocating contingency sites and therefore the policy is unnecessary. The justification for the alternative is not agreed and the alternative is not preferred. The deletion of the policy would lead to a weakened plan in which there would be no strategic policy to ensure housing delivery.	

Summary Matrix - S4 Ensuring Housing Delivery

No additional appraisals for S4 have been undertaken. Where changes proposed would result in an alternative to S2 these have been considered under the S2 section of this annex. One alternative suggests the deletion of the policy entirely which would result in no appraisal for S4 but would affect the sustainability of the plan as a whole given that they would be no planning policy to ensure housing delivery.

S5 Public open space

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Sustainable Urban Drainage Systems (SUDs) to be considered as public open space. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Disagree with paragraph 2.35, SUDs provision should be considered as public open space.'*	This alternative would result in a reduced SA score for objective H) Community health and wellbeing. In which a +2/? Is considered instead of +3. In considering SUDs as public open space, this could to lead to less open space available/suitable for recreational use as some types of SUDs are inaccessible for public use. However if the rest of the policy were to remain the same then it would still be considered that the policy overall would have a positive effect on this objective. An uncertain effect is considered as some SUDs schemes that are particularly well-designed could be counted against open space provision however this would be decided case-by-case. Furthermore it would be uncertain how much land would be required for SUDs as this is dependent on each scheme and therefore the impact on the overall open space provision is uncertain. The scores for the other objectives are considered to remain the same.
2. The provision of open space should be applied to the towns of Tiverton, Cullompton and Crediton and not parishes. A representation was made during the Local Plan Review Proposed Submission consultation asked *'Should third word of first line be 'towns' as opposed to 'parishes'?'*	This alternative would result in a reduced SA score for objective H) Community health and wellbeing. In which a +2 would be considered instead of a +3. This is because the whole needs of the district would not be covered by the policy but would only provide for the towns rather than include the parishes in which they fall within. All other SA scores are considered to remain the same.
Changes to the Plan	

In response to alternative 2 a change in wording is proposed to clarify that the policy refers to the parish boundaries of the settlements noted reflecting the original intention of the policy. All other alternatives are not beneficial and therefore are not preferred.

Summary Matrix - S5 Public open space

	Preferred	Alternative

G	-1	-1	-1
H	+3	+2/?	+2
I	+2	+2	+2

S6 Employment

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Employment allocations small scale in rural locations. A representation was made during the Local Plan Review	Policy S6 sets out a target for the amount of commercial floorspace but does not detail the location. This alternative would not have an

Proposed Submission consultation and noted that *'The allocations are in the wrong place (Cullompton especially) and therefore are unlikely to achieve these targets; there should be more small scale rural provision which would be easier to develop. This concern is supported by the lack of employment development in recent years.'*	impact on the SA score for this policy as the representation suggests alternative commercial allocations rather than result in a change to this policy. All sites currently proposed for allocation have been considered by a panel of experts and are considered deliverable. Alternative 6 for policy S2 which looks at a rural distribution of development gives some indication of the impact on the sustainability appraisal when distributing employment development more widely. The rural distribution alternative would lead to greater negative impacts on almost all sustainability appraisal objectives in comparison to the preferred alternative for S2 and would result in unsustainable travel patterns and would be contrary to NPPF advice in para 30.
2. Major leisure and tourism should be allocated. A representation was made during the Local Plan Review Proposed Submission consultation which promoted the option for a major leisure and tourism allocation on a site at junction 27 of the M5.	Policy S6 sets out a target for the amount of commercial floorspace but does not detail the specific allocations within the policy wording. This alternative would not have an impact on the SA score for this policy as the representation suggest an alternative commercial allocation rather than result in a change to this policy. The commercial allocation of junction 27 is considered later in this annex under the allocations section.
Changes to the Plan	
The alternatives suggested do not result in changes to policy S6 as such no changes are proposed.	

Summary Matrix - S6 Employment

No additional appraisals for S6 have been undertaken, the impacts of the proposed reasonable alternatives are limited, in which no significant amendments to the SA are considered.

S7 Town centres

No comments under S7 are considered to give rise to alternatives to be considered in this annex.

S8 Infrastructure

No comments under S8 are considered to give rise to alternatives to be considered in this annex.

S9 Environment

No comments under S9 are considered to give rise to alternatives to be considered in this annex.

S10 Tiverton

No comments under S10 are considered to give rise to alternatives to be considered in this annex.

S11 Cullompton

No comments under S11 are considered to give rise to alternatives to be considered in this annex.

S12 Crediton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. An additional criterion in the policy 'community and education facilities and other infrastructure to support the development proposed'. A representation was made during the Local Plan Review Proposed Submission consultation by Devon County Council and	This would result in an improved SA score of +2/? for h) ensuring community health and wellbeing, given that the school would not only provide for the new development proposed in Crediton but would meet the existing shortfall of education capacity in Crediton. The uncertain impact remains based on the existing comments in the

noted that *'There is a need for a new 1.1 ha primary school site.'* The need for a new primary school was only identified at the Proposed Submission consultation stage of the Local Plan and therefore is new information that has been considered.	SA with regard to the effect of development on local air quality which is not quantified.
Changes to the Plan	
Alternative 1 is proposed as a modification to the plan. This alternative would result in an improved score for h) ensuring community health and wellbeing by providing a new school which will not only meet the needs of the new development proposed in Crediton but would also meet the existing shortfall.	

Summary Matrix - S12 Crediton

	Preferred	Alternative

A	-1	-1
B	0	0
C	-1	-1
D	0	0
E	+3	+3
F	+2	+2
G	+3	+3
H	+2/?	0/?
I	+3	+3

S13 Villages

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Edge of Village Development. A representation was made during the Local Plan Review Proposed Submission consultation and noted that the Local Plan *'Should identify edge-of-village potential where there is no five year supply and where there is insufficient housing development in accordance with paragraph 2.11.'* A representation was also made which noted that *'Taken with S14 these create a "presumption against development" in rural areas outside settlement boundaries, contrary to the NPPF (see para 55). The policy should allow development adjoining settlement limits.'* In response to these comments an 'edge of village development' alternative has been considered.	This alternative would result in greater negative impacts in the SA on objectives A) protecting the natural environment, B) protection and promotion of a quality built environment, C) mitigating the effects of climate change, H) ensuring community health and wellbeing and I) delivering the necessary infrastructure. It also leads to an uncertain effect on objective D) safeguarding and minimising resource use. The option could lead to greater cumulative impacts given that development would be allowed beyond settlement limits and therefore would be less contained. An edge of village alternative has been appraised in annex 3 and a summary matrix is provided below.
Changes to the Plan	
Alternative 1 is not preferred as it would lead to a less sustainable policy. The role of the contingency sites ensure housing delivery without the need for edge-of-village development. The option could lead to greater cumulative impacts given that development would be allowed beyond settlement limits and therefore would be less contained.	

Summary Matrix - S13 Villages

	Preferred	Alternative

A	+3	+1
B	0	-1
C	+1	0
D	0	0/?
E	+3	+3
F	+3	+3
G	+3	+3
H	+3	+1
I	+2	+1

S14 Countryside

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. Planning Policy for Traveller Sites published in August 2015. National policy requires that new sites for travellers should be very strictly limited in open countryside that is away from existing settlements or outside areas allocated in the development plan. In response to this change in policy the removal of reference of provision of gypsy and traveller accommodation in this policy has	It is considered this change to policy would not significantly impact the SA scoring in which this amendment would be relevant to objective G) meeting housing needs, given that the policy remains supportive of affordable housing to meet local needs no change to the SA scoring is proposed. The need for gypsy and traveller sites as discussed in S3 have been allocated within larger sites and the

been considered.	opportunity for the provision of gypsy and traveller accommodation remains positive in DM7.
Changes to the Plan	
Alternative 1 is preferred to ensure the Plan is in conformity with national policy.	

Summary Matrix - S14 Countryside

The alternative proposed for this policy is not considered to give rise to any impact on the SA scoring.

Site Allocations
Tiverton
TIV1 – TIV5 Eastern Urban Extension

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Allocation for 1730 dwellings. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'Area B within the EUE is yet to be masterplanned, but survey work indicates that up to 799 dwellings can be accommodated on it, compared with the 553 dwellings referred to within the Local Plan. Together with slightly higher yields from the applications in Area A the total capacity of the site should be up to 1829 dwellings, rather than the 1520 dwellings indicated. This will improve viability and the efficient use of land for development. The policy should be amended to give a range of housing provision.'* An alternative of providing a range of 1580-1830 dwellings is considered. This takes into account permissions granted on area A and the potential for increased density in area B.	The alternative would not change the SA scores given that proposed area of the allocation and other criteria in the policy remain to provide mitigation to the potential negative effects of the development. The potential to increase the number of dwellings is still within the transport constraints of the area.
New Information	
2. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the canal to the south of the site is a conservation area	The additional items to be mentioned in the SA would not affect the scoring as the SA already takes into account a conservation area impact and the presence of locally listed heritage assets on site would not change the score as other heritage assets such as listed buildings and scheduled ancient monuments have already been recognised in

which was not previously picked up in the SA commentary although the Blundell's conservation area was mentioned. The HEA also goes into greater detail and identifies locally listed heritage assets on site which was not picked up in the SA.	the score. TIV1-TIV5 provides the mitigation measures as recommended in the HEA and therefore no change to the post-mitigation score is suggested.
Changes to the Plan	
Alternative 1 is proposed as an amendment to plan.	

Summary Matrix – TIV1-6 Eastern Urban Extension

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

TIV6 Farleigh Meadows

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that there are two listed buildings some distance from the site, Exe View (Grade II) is located to the south and there is another listed building located to the south west which was not previously picked up in the SA. The HEA also takes an entry from Devon County Council's comment on the outline planning application for this site in which it recognises potential archaeological resource in the area and suggests a non-intrusive	The HEA notes that there would not be any anticipated heritage impact and therefore there would be no change to the scoring in the SA with regard to heritage. In considering archaeological investigation, given that conditions regarding archaeological investigation have been discharged no mitigation is recommended and the SA scoring will remain the same.

field investigation. Reserved matters permission has been subsequently granted and pre-commencement conditions regarding archaeological investigation have been discharged. The site is now under construction.	
Changes to the Plan	
No changes are proposed to the Plan.	

Summary Matrix - TIV6

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

TIV7 Town Hall / St Andrew Street

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The SA already identifies listed buildings adjoining the site however the HEA goes into further detail and notes that the allocation includes works to two listed buildings and potential demolition of some unlisted buildings in the conservation area. The SA previously did not note the location of the site within the Tiverton Conservation Area. The DCC archaeology team commented on the application for the site and stated that they did not consider the site to be of	The information provided in the HEA would result in a pre-mitigation score from -1 to -2 on objective B given that the Tiverton Conservation Area was not previously mentioned. The post-mitigation score would remain as 0 taking into account the positive impact of bringing back into use the two listed buildings but development to the rear of the site potentially changing the character and appearance of the conservation area and the development pattern of the historic town. The scale, design and massing of the scheme was considered acceptable by the planning committee. With regard to archaeological investigation, given the comments provided by the DCC archaeology team no mitigation is recommended and the SA scoring will remain

significant archaeological value and did not need any further mitigation.	the same.
Changes to the Plan	
No changes are proposed to the plan, the new information provided by the HEA does not overall change the post-mitigation score and a full planning application has been approved.	

Summary Matrix –TIV7

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

TIV8 Moorhayes Park

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that there is an ancient monument located to the north west (on the north side of the A361) and the Knightshayes Historic Park is located to the north which was not previously picked up in the SA.	The SA previously did not identify these two heritage elements; however the HEA does state that the development would have no anticipated heritage impact and therefore would not change the score of the SA.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – TIV8

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

TIV9 Howden Court

No comments under TIV9 are considered to give rise to alternatives to be considered in this annex.

TIV10 Roundhill

No comments under TIV10 are considered to give rise to alternatives to be considered in this annex.

TIV11 Palmerston Park

No comments under TIV11 are considered to give rise to alternatives to be considered in this annex.

TIV12 Phoenix Lane

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Delete policy TIV12 Phoenix Lane. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'Policy TIV12 should be deleted.'*	The deletion of this policy would lead to a less positive and sustainable plan in which there would be no allocation proposing the regeneration of Tiverton town centre.
Changes to the Plan	
The proposed alternative is not preferred as they would lead to a less positive and sustainable plan. The justification for deletion is also not agreed.	

Summary Matrix - TIV12

One alternative suggests the deletion of the policy entirely which would result in no appraisal for TIV12 but would affect the sustainability of the plan as a whole. The deletion of this policy would lead to a less positive and sustainable plan.

TIV13 Tidcombe Hall

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Delete policy TIV13 Tidcombe Hall. A representation was made during the Local Plan Review Proposed Submission consultation and noted *'Objection as Tidcombe Lane is good boundary for development south of the canal and sufficient housing being built in Tiverton and more promised in future.'*	This comment suggests the deletion of Tidcombe Hall contingency site. This would lead to the loss of the contingency site and a less sustainable and flexible plan in terms of meeting housing needs. The purpose of the contingency sites is explained in policy S4.
2. 8.4ha with 200 dwellings This alternative re-considers the allocation as set out in the options consultation for a higher number of dwellings taking into account the information set out in the Historic Environment Appraisal (HEA) and reasons for the reduction in total dwellings based on SHLAA panel recommendations. Note the site area for the preferred alternative noted in the Proposed submission policy and this alternative are the same. 5.0ha noted in the Proposed Submission policy was written in error.	In reconsidering this site for the higher number of dwellings presented during the Local Plan Review Options consultation given the reasons for the reduction in total dwellings based on SHLAA panel and HEA recommendations, the site scores more negatively than the preferred policy in objectives A), B) and I) predominately due to the greater scale of development proposed within the allocation and the limitations of mitigation options as reflected in the latest evidence. A full appraisal is provided in annex 3 and a summary matrix is provided below.
New Information	
3. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic	This would result in no change to the pre or post mitigation SA scores of the Proposed Submission Local Plan Review as the importance of

environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the same elements as mentioned in the SA in objective B, but goes further to note that Tidcombe Hall is a 'potential heritage asset'.	Tidcombe Hall was already recognised in policy. Mitigation is also reflected in the reduced housing number in comparison to the higher density presented at the Local Plan Review Options consultation and discussed above.
Changes to the Plan	
Alternative 1 suggests the deletion of the policy entirely with the justification based on the argument that Tidcombe Lane is a good boundary for development and there is sufficient housing in Tiverton. The purpose of the contingency site is to enable flexibility in the plan to enable further sites to come forwards if the expected level of delivery falls significantly below the annual target. Overall the plan would be less sustainable without this contingency site as there would be less flexibility to ensure housing needs are met. Alternative 1 is therefore not preferred. Alternative 2 would result in greater negative impacts on the sustainability objectives A) natural environment, B) built and historic environment and I) delivering the necessary infrastructure and is therefore not preferred. New information presented in the Historic Environment Appraisal would not change the pre or post mitigation scores for the proposed submission policy which already recognises the elements set out in the HEA.

TIV14 Wynnards Mead

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Delete policy TIV14 Wynnards Mead. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object as housing not needed/already over-provision within the plan/sufficient building going on elsewhere.'*	This comment suggests the deletion of Wynnards Mead contingency site. This would lead to the loss of the contingency site and a less sustainable and flexible plan overall in terms of meeting housing needs. The purpose of the contingency sites is explained in policy S4.
New Information	
2. A representation was made during the Local Plan Review	The existing appraisal for TIV14 has been updated to assess the

Proposed Submission consultation and noted that *'Policy currently unsound, advises reference to Cottey Brook be given, and requests unobstructed public open space buffer, at least 7m wide to allow for future maintenance of watercourse.'* In response to this new information two alternatives are considered. The first considers the proposed contingency allocation in light of this new information without additional mitigation. The second considers a reduced area alternative as a result of additional mitigation to respond to this new information.	impact of this new information. If only the existing mitigation proposed in the Local Plan Review proposed submission policy is provided a reduced score for objective C) mitigating the effects of climate change is considered as the flood risk set out in the Environment Agency representation wouldn't have been accounted for. To provide the necessary mitigation required in response to new information provided by the Environment Agency and the Historic Environment Appraisal (discussed below) a new reduced area alternative is proposed. Full appraisals of the original site area taking into account the impact of this new information with existing mitigation and a reduced area site alternative are provided in annex 3 with a summary matrix provided below.
3. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that Gotham since the previous appraisal has been upgraded to a grade II* listing. The HEA finds development as proposed would be very damaging to the setting of the listed building and heritage asset Wynnards Mead and would erode their special interest. In response to this new information two alternatives are considered. The first considers the proposed contingency allocation in light of this new information without additional mitigation. The second considers a reduced area alternative as a	The existing appraisal for TIV14 has been updated to assess the impact of the new information provided by this alternative with the existing mitigation in the policy. As a result of this new information regarding the historic environment appraisal a significant negative impact is considered for objective B) protection and promotion of a quality built and historic environment. To provide the necessary mitigation required in response to new information provided by the Environment Agency (discussed above) and the Historic Environment Appraisal a new reduced area alternative is proposed. Full appraisals of the original site area taking into account the impact of this new information with existing mitigation and a reduced area site are provided in annex 3 with a summary matrix provided below.

result of additional mitigation to respond to this new information.	
Sustainability Appraisal Comments	
4. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective B) protection and promotion of a quality built and historic environment. Argues score is too high and does not take into account the other heritage assets.'* Individual (5551)	The site has been reassessed due to new evidence undertaken as part of the Historic Environment Appraisal (HEA). Gotham since the previous appraisal has been upgraded to a grade II* listing. The HEA finds development as proposed would be very damaging to the setting of the listed building and heritage asset Wynnards Mead and would erode their special interest. In response to this new information provided in the HEA a significant negative effect -3 on objective B) built and historic environment is considered in the reappraised SA. The impact of the new information with existing mitigation and an alternative of a reduced area have been appraised and a summary matrix is provided below.
5. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective D) safeguarding and minimising resource use. Argues score is too high due to agricultural nature of the land with 1/3 of land classified as Grade 3 and contaminated land.'* Individual (5551)	The appraisal guidance p.192 of the Proposed Submission SA sets out how agricultural grades and land contamination have been considered as part of the appraisal process. The elements noted in the representation have been considered consistent with other sites in the Local Plan Review. Therefore the suggested change is not agreed.
6. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective E) promoting economic growth and employment. Boosting local construction firms and associated trades is true of all development and should not be the test but whether the finished development promotes growth/employment.'* Individual (5551)	Agree the scoring should be reduced to 0 as the score provided for this site in the previous SA does not follow the appraisal guidance on p.192 in which residential development less than 100 dwellings is considered to have a neutral effect. This scoring has been consistently applied to other sites in the Local Plan Review. Disagree that boosting local construction firms and associated trades should not be

	considered in this objective. For larger sites residential development is considered to have a slight positive impact. This agreed scoring has been reflected in the updated and reduced area alternative appraisals and a summary matrix is provided below.
7. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective F) supporting retail. Believe should only consider new retail provision.'* Individual (5551)	Consistent with other sites appraised in the Local Plan Review, where small sites are proposed within a town a slight positive effect on the town centre is considered. Disagree that the impact on existing retail should not be considered as part of this objective. As set out in the SA, this objective considers safeguarding the vitality and viability of town centres and the relationship between new development and town centres. No change to the SA is proposed.
8. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective G) meeting housing needs. A significant positive effect overstates the number of houses the site is actually providing in the context of the Plan as a whole.'* Individual (5551)	Agree that the term 'significantly' is misleading and is therefore suggested to be removed from the commentary. However disagree that the score is too high. Consistent with other sites appraised in the Local Plan Review sites of a scale of 20-99 dwellings are considered to have a positive impact in meeting housing needs. No change to the SA is proposed.
9. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to score for objective H) ensuring community health and wellbeing. Disagree site is close to a bus service and suggests that there's no other evidence for this score.'* Individual (5551)	Disagree, there are a number of bus services available within 0.5 miles of the site. The site is also within walking distance to Tiverton Town centre. Consistent with other sites appraised in the Local Plan Review this site has scored a slight positive impact for the reasons above. No change to the SA is proposed.
Changes to the Plan	
Alternative 1, the deletion of the policy is suggested as a modification to the plan, although not for the reasons provided in the comment but in	

response to the new information provided by alternative 2 and 3. Whereby in considering the new information presented by the EA on flood risk and the built and historic environment by the HEA, to continue with the existing policy would lead to a significant negative effect on objective B) protection and promotion of a quality built and historic environment, and a negative effect on objective C) mitigating the effects of climate change. Due to this new information, the policy as proposed is no longer preferred.

A reduced area alternative was considered by this SA in response to the mitigation required by the new information which would result in a site of 1.2ha subject to 29 dwellings. This alternative would result in an improved score for B), C) and D). However overall given that the purpose of the site for inclusion as a contingency allocation, the reduced area alternative would no longer support the quantum of development required to be effective as a contingency allocation. The site is therefore proposed for deletion. The deletion of the policy results in the loss of the contingency site and therefore a less sustainable and flexible plan, however the sustainability issues of the site outweigh the benefit of the inclusion of the contingency site without mitigation. Flexibility in the plan overall continues as two other contingency sites in the plan remain.

Comment 6 is suggested as a modification to the SA objective E) promoting economic growth and employment, as the original score did not follow the appraisal guidance on p.192 in which small scale residential development which is less than 100 dwellings is considered to have a neutral effect. This has been reflected in the reappraised sites, taking into account the impact of new information with existing mitigation and the reduced area alternative. All other alternatives refer to SA scoring and are not preferred for reasons set out above.
The impact of the new information with existing mitigation and an alternative of a reduced area have been appraised. A summary matrix is provided below along with the scoring for the original appraisal for comparison.

Summary Matrix - TIV14 Wynnards Mead

	Alternative

TIV15 Tiverton Infrastructure

No comments under TIV15 are considered to give rise to alternatives to be considered in this annex.

Tiverton Alternative Options
OTIV2 Hartnoll Farm

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Hartnoll Farm with 1000 dwellings and 20,000sqm employment. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to exclusion– site can accommodate 1000 dwellings (at 35 per hectare, with full mix of types and sizes, and an element of affordable housing), at least 20,000sqm employment (6.97ha allowed to wrap around existing Hartnoll Business Centre), primary school (1.95ha allowed), neighbourhood/local centre (to serve retail/social needs of community inc. 2000sqm mix of uses including community hall/space, local shops, restaurant/café, pub and/or hot food takeaway) and green infrastructure (12.07ha inc amenity open space, children's play, allotments/orchards, buffer planting, sports/playing field provision off-site on adjacent land to south). Site can accommodate not only 500 dwellings currently allocated towards EUE area B, but more of Tiverton's future demand.'* In response to this, an alternative of OTIV2 was considered with a change in total number of dwellings to 1000 and an addition of 20,000sqm employment. The other suggestions in the representation are already covered by the existing criterion in the Local Plan Review options policy which was consulted in 2014.	The change in this policy would result in a change in score for objective E) promoting economic growth and employment in which the policy provides 20,000 sqm of commercial floorspace helping to diversify the economy and encourage inward investment. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. It provides employment sites near where to people live would provide the opportunity to reduce out-commuting. There would therefore overall be a significant positive impact +3 in objective E) promoting economic growth and employment. All other scores for the objectives in the SA are considered to remain the same.

Changes to the Plan
Alternative 1 is not preferred and OTIV2 Hartnoll Farm is not proposed as an allocation given the issues around objective B) Protection and promotion of a quality built and historic environment in which the coalescence of Tiverton and the village of Halberton which has its own separate identity cannot be mitigated.

OTIV4 Blundells School (Proposed for allocation TIV16)

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
Sustainability Appraisal Comments	
1. National planning policy acknowledges the importance of ensuring housing numbers and employment opportunities are considered in tandem. In response to this full Council on 22nd September 2016 resolved to reallocate land at Blundells School for residential development of 200 dwellings. The policy has been amended to reflect the latest evidence and has been reappraised taking these findings into account. A full appraisal has been provided in Annex 3 and a summary matrix is provided below.	In comparison to the alternative considered during the Local Plan Review Proposed Submission (2015) at Blundells School for 60 dwellings, this alternative scores more positively or the same in all aspects apart from objective e) promotion of economic growth and employment given the 7000sqm of commercial floorspace is no longer considered. This new appraisal takes into account new information including the support of the Environment Agency and the provision of a new junction on Heathcoat way to enable the delivery of 200 dwellings. The appraisal also has greater recognition of the benefits of the contamination assessment and remediation of the site.
New information	
2. The Environment Agency has provided its support for the Blundells School site given that the development of the site would provide an opportunity to promote green infrastructure, contribute towards Water Framework Directive objectives through the policy area specifically the Industrial Estate, reduce flood risk downstream within Tiverton and alleviate erosion issues opposite Tiverton Business Park.	This new information has improved the scores for objective C) mitigating the effects of climate change.
3. Provision of junction on Heathcoat Way.	This new information enables the delivery of 200 dwellings on the site as such improvements are considered for a number of the objectives including objective G) Meeting housing needs.

4. Development is now considered deliverable. The costs principally associated with access and flood mitigation measures at the Proposed Submission stage of the Local Plan was considered to prohibit development in this location. However these issues have now been overcome.	This new information does not change the scoring of the site. The site is now proposed for allocation.
5. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that there will be some impact on the Conservation area however notes that good design can provide scope for improvement of the setting of the conservation area.	This new information is recognised in the Sustainability Appraisal and post-mitigation a slight positive score is considered overall.
Changes to the Plan	
The policy is proposed to be included as part of the Local Plan Review. Overall the policy scores more positively than the option considered at the Local Plan Review Proposed Submission consultation (2015).

OTIV13 Exeter Hill

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
Sustainability Appraisal Comments	
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Object to exclusion – SA highlighted landscape impacts, but not a valued/designated landscape as per NPPF, and impact*	It is agreed that the scoring for objective A) protection of the natural environment should be amended to a -1 rather than a -2 score to be aligned with other sites in which existing development forms a backdrop but the site is highly visible. This concurs with the Inspectors

exaggerated/landscape impact not substantiated by evidence, will be seen against backdrop of town, and can be assimilated with careful design and strategic planting'. N Jillings for Devonshire Homes (1050); Dial Holdings c/o PCL Planning (2315)	comment during the Examination of the AIDPD. He concluded in consideration of visual impact it would be a relatively modest extension to the urban area, set below the skyline, but nevertheless it would be more intrusive than other allocations.
Changes to the Plan	
No changes are proposed to the Local Plan given that the site is not required for development to meet the needs of the Local Plan and it would be more intrusive than other allocations.

OTIVNEW New Site Land at Seven Crosses Hill

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. OTIVNEW Land at Seven Crosses Hill, 7.69ha for 184 dwellings. A representation was made during the Local Plan Review Proposed Submission consultation which put forward a site of *'7.69ha; provides logical sustainable expansion of Tiverton, in light of uncertainty with EUE masterplanning. Site enclosed by established boundary planting, with scope to reinforce boundary trees/hedges to maintain 'soft' green edge to this part of town. No viability issues, no significant on or off-site abnormal development costs, and can contribute to land supply'.*	A full appraisal of this site is provided in annex 3 and a summary matrix is provided below.
Changes to the Plan	
This alternative site is not preferred given that there are a number of constraints to the site including topography and highways access. Although access is achievable, work would require significant excavation and would constrain the delivery of the expected yield.	

Summary Matrix – OTIVNEW New Site Land at Seven Crosses Hill

I	-1/?

Cullompton

CU1-CU6 North West Cullompton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Education counted as part of the 21,000sqm commercial floorspace. A representation was made during the Local Plan Review Proposed Submission consultation which noted that *'whilst the use of the wider definition of employment is supported, the 21,000sqm of commercial floorspace in policy CU1 should include reference to education'.*	2.1ha identified for the school could amount to 21,000sqm of commercial floorspace and would not enable the provision of other employment generating uses for the area. Taking into account the potential for 21,000sq m of commercial floorspace that could be lost in the allocation the result would be a greater negative impact on objective E) promoting economic growth and employment. Overall a slight positive instead of a significant positive effect would be considered (+1).
2. Include the whole of the proposed Growen Farm option for development as part of the North West Cullompton allocation. Various representations were made during the Local Plan Review Proposed Submission Consultation which suggested the full allocation of the Growen Farm option. In response to these comments an alternative of the inclusion of the whole of the proposed Growen Farm option for development as part of the North West Cullompton allocation has been considered.	This alternative would result in a greater negative score for objective A) protection of the natural environment in which the 2014 Landscape and Visual Appraisal on Strategic Site Options report identified the eastern field segments of the Growen Farm land as not suitable for development. A summary matrix is provided below.
New Information	

3. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the same elements as mentioned in the SA but provides greater detail on the impact of each element and mitigation options available.	This would have no change to the pre or post mitigation SA scores as the SA already recognises the elements identified in the HEA. The recommendations in the HEA can be taken into account as part of the masterplanning exercise which is identified in the SA as a mitigation. No change to the SA is proposed.
4. Contributions from development to Town Centre relief road and J28. Also note a change to the total commercial floorspace is proposed in-line with the adopted North West Cullompton masterplan to 10,000sqm.	Overall this will improve the post-mitigation score of objective I) delivering the necessary infrastructure to +3 given the development of this site will help to deliver multiple significant infrastructure projects which will benefit the wider community. This is the preferred alternative. The change to the total commercial floorspace does not affect the scoring of the site as it still provides large scale commercial development in-line with the appraisal guidance of the SA.
5. Re-allocation of land to the south west of the site.	This would make no changes to the SA scores of the site. The area included has been previously allocated and appraised. The cumulative impact of developing sites at Cullompton is discussed in annex 1.
Sustainability Appraisal Comments	
6. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of -2 for objective A) protection of the natural environment.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	It is agreed that the impact on landscape was not fully reflected in the proposed submission SA scoring and a slight negative score is considered. It is however not agreed that a negative (-2) score is appropriate given that mitigation has been considered as part of the site including not allocating the most sensitive area of Growen Farm to reflect the findings of the Landscape and Visual Appraisal as well as positive impacts of environment protection and enhancement and

	provision of Green Infrastructure set out in the policy. However as noted in the rep and the proposed submission SA text, given the level of development the proposal is considered to have an impact on the character of the area and this was not previously reflected in the original score. This has been reflected in the updated appraisals below.
Changes to the Plan	
The new information provided in alternatives 4 and 5 are proposed as modifications to the plan. The representation made in alternative 6 is also agreed and proposed a change to the SA scores as identified in the matrix below. A change to the SA scoring is also proposed following the comment made in alternative 6.	

Summary Matrix - CU1-CU6 North West Cullompton

	Preferred	Alternative		
Sustainability Objective	Contributions to wider infrastructure	Proposed Submission Policy SA	Education incl. as commercial	Including Growen Farm

H	+2	+2	+2	+2
I	+3	+2	+2	+2

CU7-CU12 East Cullompton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. No quantum specified for criteria b) green infrastructure and c) public open space. A representation was made during the Local Plan Review Proposed Submission consultation which noted that they *'Support the principles of this policy (CU9 East Cullompton Environmental Protection and Green Infrastructure) and recognise the importance of green infrastructure. However would wish to see more flexibility to the quantum identified in criteria b and c. The level of provision should be agreed as part of the master planning work and removed from the local plan policy'.*	This alternative would result in an element of greater uncertainty for objective A) Protection of the natural environment to -1/? given that without the broad quantum of strategic green infrastructure set out in policy the mitigation this will provide is uncertain. A greater negative effect although uncertain, is also considered for objective H) (-1/?) ensuring community health and wellbeing in which the required green infrastructure and areas of public open space identified to meet the needs of the new community may not be provided.
2. Proposed Submission version East Cullompton with landswap part of site – Land at 'Newland Persey' replaced with land at 'Cooke'. East Cullompton total 166 ha site area. A representation was made during the Local Plan Review Proposed Submission consultation which suggested *'the best way forward for all parties would be for me to offer my 45 acres…on the north side of the A373 in exchange for the land at Newlands Farm on the south side of the A373'.*	This alternative would result in the same scoring in the SA as the Proposed Submission option given that the landswap proposed is in the same landscape character area and has similar features to the rest of the East Cullompton site. An additional appraisal has not been provided given the same scoring.
3. East Cullompton Aller Barton Farm and land south of Honiton Road. 181ha site. A representation was made during the Local Plan Review Proposed Submission consultation which suggested *'I would*	This alternative scores less positively in objective B) protection and promotion and potential of quality built environment. A greater uncertain effect is considered for objectives A) protection of the natural environment, H) community health and wellbeing and I)

repeat my offer to move if you take the whole of my farm….making land available up to the Cullompton/Plymtree road'.	delivering the necessary infrastructure. The site does however score more positively in objective D) safeguarding the minimising resource use. A full appraisal is provided in annex 3 and a summary matrix is provided below.
New Information	
4. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that the site is close to a number of listed building including the grade II Higher Moorhayes Farmhouse building and front garden wall and the grade II Lower Moorhayes former farmhouse. Both listed buildings lie to the north east edge of the allocation with Lower Moorhayes most closely affected. These listed building were not previously identified in the SA. All other elements noted in the HEA were noted in the SA previously and would not affect the SA score.	The SA did not previously identify the listed buildings noted in the HEA in which a pre-mitigation score of -2/? Is considered. The HEA recommends careful consideration with regard to proximity of new buildings, together with the details of design materials and colour palette used. The policy already requires a public masterplanning exercise to ensure the quality of the final design of development which will provide mitigation. The HEA suggests that Lower Moorhayes should be provided with a planted buffer zone to the south side. A modification has been recommended to add an additional criterion to state 'Design solutions which respect the settings of listed buildings adjoining the site'. With this mitigation in place it is considered the post-mitigation score will remain the same.
Sustainability Appraisal Comments	
5. A representation was made during the Local Plan Review Proposed Submission consultation which suggested *'East Cullompton option should score a +2 positive impact under H) ensuring community health and wellbeing based on provision of public open space, public access points, community services and facilities etc'.* Pegasus Planning (3678)	The reasons set out in the comment have been considered in the scoring of East Cullompton as set out in the 'mitigation' commentary which improves the original score of -3 to 0. The +2 score is not agreed. Therefore no change is proposed.

6. Disagree with part I) 'Commitment' to improvements at J28. Believe it is uncertain. Hallam Land Management (4386)	Not agreed Part 'I' does not mention 'commitment' to improvements at J28 but does identify a phasing strategy and provision of mitigation measures to ensure only acceptable impacts occur to J28. The Council has been working closely with statutory consultees to ensure emerging proposals for junction 28 M5 improvements are appropriately designed.
7. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of -1 for objective A) protection of the natural environment.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	The representation concludes the same score as the SA.
Changes to the Plan	
Alternative 4 is preferred. The additional criterion provides mitigation and protection to the historic environment although the SA score remains the same. All other alternatives are not preferred. For alternative 2 although the resultant scoring is the same as the Proposed Submission option, the delivery of this alternative would be more challenging. The Landscape and Visual Appraisal 2014 notes that development North of Honiton Road, development would be phased west to east with an intermediate threshold at the linear woodland. Extension of development beyond that boundary might be possible in the longer term, but would need to be subject to a more detailed assessment to determine the effect on the wider landscape and visibility from the AONB. The area to the South of Honiton Road, development is less constrained and would be undertaken across much of the site. Therefore the land swap proposed would affect delivery rates with the proposed substituted land only be delivered at the end of development instead of earlier on in the development, in which the area South of Honiton Road could be provided. Alternative 3 is not preferred. The unusual shape and separation of the site with existing development to the west raises concerns about how well the final design could integrate the existing and proposed development. The unusual shape with only access to the east of the site also raises a level of uncertainty in providing accessible forms of travel and providing the necessary infrastructure. No changes to the SA are proposed following comments on the SA in alternatives 5 to 7.

CU13 Knowle Lane

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
Sustainability Appraisal Comments	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of 0 for objective A) protection of the natural environment.'*	The representation concludes the same score as the SA.

Mr Christian & Mr Force c/o Genesis Town Planning (3780)	
Changes to the Plan	
The comment made would result in no changes to the Plan or SA.	

Summary Matrix – CU13 Knowle Lane

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CU14 Ware Park and Footlands

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that the site lies some distance to the south west of St Andrew's Hill (a Roman fort and Scheduled Ancient Monument) and to the south of a possible road leading west from the fort. The SA did not previously identify these heritage elements. All other elements noted in the HEA were noted in the SA previously and would not affect the SA score.	The HEA states that the proposed development would have no anticipated heritage aspect, therefore no change to the SA is proposed.
Sustainability Appraisal Comments	
2. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a*	The representation concludes the same score as the SA.

post-mitigation score of 0 for objective A) protection of the natural environment.' Mr Christian & Mr Force c/o Genesis Town Planning (3780)	
Changes to the Plan	
None of the alternatives would result in any changes to the Plan or the SA.	

Summary Matrix - CU14 Ware Park and Footlands

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CU15 Land at Exeter Road

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. Site allocation proposed to be reduced to 24 dwellings. Site has permission for 24 dwellings, there is no confirmation that the remainder of the site is deliverable and is unlikely to make the contribution in numbers stipulated by the original proposed policy.	No changes to the SA are expected.
Sustainability Appraisal Comments	
2. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of 0 for objective A) protection of the natural environment.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	The representation concludes the same score as the SA.
Changes to the Plan	

The comment made would result in no changes to the Plan or SA.

Summary Matrix - CU15 Land at Exeter Hill

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CU16 Cummings Nursery

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
Sustainability Appraisal Comments	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of 0 for objective A) protection of the natural environment.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	The representation concludes the same score as the SA.
Changes to the Plan	
The comment made would result in no changes to the Plan or SA.	

Summary Matrix - CU16 Cummings Nursery

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CU17 Week Farm

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. A representation was made during the Local Plan Review	This alternative would suggest the broadening of employment

Proposed Submission consultation which suggested that *'Allocation should include space for retail outlets of similar size to Aldi'.*	floorspace to A class which could have a negative effect on the town centre by providing main town centre uses out of town centre. Therefore a negative effect (-2) is considered for objective F) supporting retail.
Changes to the Plan	
No changes to the plan are proposed. The alternative suggested is considered less sustainable and therefore not preferred.	

Summary Matrix - CU17 Week Farm

H	-1	-1
I	0/?	0/?

CU18 Venn Farm

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that the *'allocation should be extended to incorporate adjacent 8 hectares; new housing growth will benefit from additional employment, Cullompton is strategically placed on M5 and larger site will help support the infrastructure costs of the site (i.e. land needed for flood zone, habitats, link road)'*. This alternative is similar to the consideration of a combined allocation of the three sites A) Venn Farm B) Land adj Venndale NW Long Moor Road C) NW Kingsmill Industrial Estate in Cullompton considered at the Local Plan Review options consultation. In response to this alternative, the combined allocation of 13.2ha of 31,090sqm commercial floorspace has been considered.	This alternative has been considered as it is distinct to the proposed option. However upon appraisal as the proposed site and the alternative both fell within the same grouping i.e. over 10,000sqm commercial floorspace and were in the same location it led to matching results in the SA. As such no appraisal or summary matrix is provided as the results are the same as the proposed submission.
Changes to the Plan	
Alternative 1 is not preferred as the additional commercial development is not necessary. The Local Plan Review already allocates sufficient provision.	

Summary Matrix - CU18 Venn Farm

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CU19 Town Centre Relief Road

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that parts of the site include or are close to the conservation area including the historic mill leat. Several listed buildings nearby including Grade I St Andrews church. Grade II listed first bridge is located to the south. The HEA also identifies the site lies within a landscape that has evidence of prehistoric and Roman activity recorded, elements which were not previously picked up in the SA.	This information would change the pre-mitigation score to a -3/? for objective B) the built and historic environment. Recognising the potential impact on the listed buildings and conservation area as well as the possibility of archaeological deposits. However much of the impact will depend on the line of the proposed road and its design. The policy includes a requirement for public consultation which will help provide for the most appropriate design provision. An amendment to the policy and supporting text has been proposed which ensure the protection of the setting of listed buildings, conservation area and the provision of archaeological investigation and mitigation. It should also be recognised that a town centre relief road would result in major public benefits making the town centre a more pleasant environment and enabling an upgrade of the historic environment by improving the setting of a large number of listed buildings. Therefore post mitigation score is suggested to be a neutral although uncertain effect 0/?.
Changes to the Plan	
Amendments to the policy and supporting text are proposed which ensure the protection of the setting of the listed buildings and	

conservation area and ensures the provision of archaeological investigation and mitigation.

CU20 Cullompton Infrastructure

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. A representation was made during the Local Plan Review Proposed Submission consultation and which *'Requests additional criterion stating 'provision of works to reduce flood risk'*.	This alternative would result in a greater positive impact on objective c) Mitigating the effects of climate change. Overall with the positive impact of this criterion, CU20 scores +3 post mitigation for objective c).

Changes to the Plan
Alternative 1 is proposed as a modification to the plan. This alternative would result in an improved score for objective c) mitigating the effects of climate change. Cullompton is a Critical Drainage Area which requires measures to reduce flood risk (above those expected elsewhere) therefore it is considered that the modification proposed by alternative 1 is beneficial in improving the sustainability of this policy.

CU21 Land at Colebrook CONTINGENCY SITE

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. 19.3ha, 400 dwelling site. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they object *'to exclusion of 16.8ha site as a full allocation within the plan/objects to inclusion of 4.8ha as contingency site only. Minimum of 400 dwellings should be allocated within the site area of 21.6ha'* In response to this representation an alternative of 19.3ha for 400 dwellings was considered. This represents the full area proposed as part of the options consultation. 16.8ha referred to in the options allocation and 21.6ha referred to in the representation are both errors in measuring the size of the full allocation.	In considering this alternative in comparison to the preferred option of 4.8ha 100 dwellings, the site would score less post-mitigation on objective A) protection of the natural environment in which a slight negative -1 score is considered due to the larger site reflected and the potential impact on the landscape. It also scores more negatively in objective I) delivering the necessary infrastructure with a negative score of -2 as the site is of a scale that is significant enough to affect the local road network. A full appraisal is provided in annex 3 and a summary matrix is provided below.
Sustainability Appraisal Comments	
2. A representation was made during the Local Plan Review Proposed Submission consultation which argued that the SA *'Has not properly considered all site alternatives at Cullompton. Colebrook at 16.8ha, 300 dwellings should be considered'.* Mr Christian & Mr Force & Mr Christian c/o Genesis Town Planning (3780)	A larger site of 16.8ha of 300 dwellings was considered at the Local Plan Review options consultation although the SA at that time did not consider post-mitigation scores. As noted in alternative 1, 16.8ha referred to in the options allocation was an error in measuring the size of the allocation. As such an appraisal for the full allocation of 19.3ha for 400 dwellings has been considered in this SA as set out in alternative 1. A full appraisal is provided in annex 3 and a summary matrix is provided below.
3. A representation was made during the Local Plan Review	The representation concludes the same score as the SA.

Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) scores this site a post-mitigation score of 0 for objective A) protection of the natural environment.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	
4. A representation was made during the Local Plan Review Proposed Submission consultation and stated that their *'Accompanying appraisal (submitted with rep) states landscape impact for the larger proposed site is same as other allocated large sites in Cullompton, i.e. slight negative impact.'* Mr Christian & Mr Force c/o Genesis Town Planning (3780)	The representation concludes the same score as the SA.
Changes to the Plan	
Alternative 1 is not preferred given that the site is of a scale that is significant enough to affect the local road network. Alternative 2 is a comment on the SA which identifies that a full appraisal has not occurred for the larger Land at Colebrook alternative. In response to this a full appraisal has been undertaken with a summary matrix provided below. Alternative 3 and 4 conclude the same score as the SA, as such no changes are proposed.

Cullompton Alternative Options
OCUNEW Tiverton Road

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and objected to the omission of this site. *'Site is previously developed land and is not affected by constraints of larger, infrastructure-dependent sites. Can accommodate 13-19 dwellings. Site is within walking distance of bus services, and is within single ownership. Site serves wide catchment so redevelopment would not result in loss of a local community facility. Pre-development conditions would cover contamination, transport statement and travel plan, archaeological investigation, biodiversity survey, screening/safety/security from adjacent sub-station'.*	A full appraisal of this site is provided in annex 3 and summary matrix is provided below.
Changes to the Plan	
Alternative 1 is not preferred. Although the post-mitigation scoring is relatively neutral, the unknown impact with regard to the potential loss of a community facility could amount to a negative impact on objective H) ensuring community health and well-being. It has been scored a neutral effect as the representation made as part of the Local Plan Review Proposed Submission consultation has argued there would be no loss of a local community facility as a new better site is preferable in a better location for congregation. However as there is no sufficient detail in the representation to be certain of this provision. Furthermore as this is a brownfield site within the settlement limit it does not need to be allocated for an application to come forward, as such, it is therefore not preferred.

Crediton

CRE1 Wellparks

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'consider policy unsound - proposed allocation subsumes grade II listed farm complex and alters setting. Disputes assessment in recent planning application and states Historic Environment Appraisal needs to reassess the likely impact which the development will have on the Conservation Area (and presumably listed building?), if concludes there is harm, provide mitigation and if still harm justify allocation.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the same elements as mentioned in the SA in objective B, but provides further detail in the scope of the harm and mitigation options available; as such no change in the pre-mitigation score is considered. Detail in the HEA recognises the site now has outline planning permission with mitigation to protect the heritage assets impacted by the site. However the HEA does note that there will be some negative impact on the Conservation Area which was not previously recognised post-mitigation, as such a slight negative effect is considered post-mitigation (-1).
Changes to the Plan	
No change to the plan is proposed however a change in the post mitigation score in objective b) for this site is considered with the effect changing from a neutral score (0) to a slight negative score (-1) given the potential impact on the conservation area.	

Summary Matrix - CRE1 Wellparks

CRE2 Red Hill Cross, Exhibition Road

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they consider that the *'Policy is currently unsound - no work in evidence base to assess impact on Shobrooke Park; appraisal needed, if concludes harm set out mitigation measures, if cannot be mitigated need to justify allocation as per NPPF para 133 and 134.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies Creedy Bridge and Cottages located to the north east. Shobrooke Historic Park located to the east, and Creedy Park to the north west. There is

	also a grade II listed chapel cemetery located toward the south. These elements were not previously picked up in the SA as such a pre-mitigation score of -2 from 0 is suggested. The HEA recommends mitigation in the form of a generous landscape margin on the east facing side of the site. A change to the plan is proposed to add to the supporting text, to reflect this recommendation. Therefore the post-mitigation score remains as 0.
Changes to the Plan	
In response to new information presented in alternative 1, a change to the plan to replace paragraph 3.160 with 'The site is in a prominent position, which is visible from historic Shobrooke Park to the east. Detailed design and development which respect local distinctiveness, including a generous landscape margin on the east facing side of the site will mitigate any potential impact' is proposed to reflect the recommendation in the HEA and provide mitigation for this preferred alternative.	

Summary Matrix - CRE2 Red Hill Cross, Exhibition Road

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CRE3 Cromwells Meadow

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they consider that the *'Policy is currently unsound - no work in evidence base to assess impact on Shobrooke Park; appraisal needed, if concludes harm set out mitigation measures, if cannot be mitigated need to*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies Creedy Bridge and Cottages located to the north east. Shobrooke Historic

justify allocation as per NPPF para 133 and 134'.	Park located to the east, and Creedy Park to the north west. There is also a grade II listed chapel cemetery located towards the south. However the HEA also notes that the backdrop of existing Cromwells Meadow and Willow Walk provide a level of mitigation. The HEA also identifies the site lying in an area of archaeological potential. These features of the site were not previously picked up as part of the SA however as noted in the HEA some mitigation is provided by existing development, as such an overall pre-mitigation score of -2/? is considered for objective b) the built and historic environment. The HEA recommends that additional mitigation may be provided through landscaping along the sensitive boundary. An amendment to the supporting text has been suggested as a change to the Plan to reflect this recommendation. The HEA also notes that archaeological mitigation could be implemented through a condition granted to any consent. An amendment to the policy has been suggested to include a criterion which requires archaeological investigation and mitigation. As such overall a neutral although uncertain effect is considered for objective b) the built and historic environment, post-mitigation given the unknown element of the archaeological potential.
Changes to the Plan	
In response to new information presented in alternative 1, a change to the Plan to add to the supporting text a new sentence which states 'Appropriate landscaping will be required along the eastern boundary given the potential visibility of the site from historic Shobrooke Park' is recommended in response to the HEA. Similarly a criterion to the policy to ensure archaeological investigation and mitigation is suggested.

CRE4 Woods Group, Exeter Road

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identified non listed heritage assets on the site which should be retained, this was not previously recognised in the SA. All other	When taking into account the potential positive impact of the site on the conservation area with redevelopment, but the negative impact if there is a loss of the unlisted heritage assets as noted in the HEA the impact on objective b) protection and promotion of a quality built and historic environment pre-mitigation is considered to change to a neutral although uncertain effect (0/?) from a slight positive effect.

aspects identified in the HEA have been previously considered in the SA.	The uncertainty is due to the unknown design of the site and whether the unlisted heritage asset buildings will be retained. The HEA suggests the retention of the non-listed heritage assets as mitigation. As such a change to the policy supporting text is recommended in which retains these non-listed heritage assets with the overall post-mitigation score remaining as a slight positive effect (+1) given that the site at present is run-down and detracts from the area and the redevelopment of the site has the potential to enhance the local street scene and conservation area.
Changes to the Plan	
A change to the policy supporting text is recommended retaining the non-listed heritage asset buildings within the site.	

Summary Matrix – CRE4 Woods Group, Exeter Road

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CRE5 Pedlerspool

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted *'As set out in evidence report, new primary school required in Crediton. Policy should be amended to include provision for this new school.'*	The change in policy would result in an increased post-mitigation score from 0 to +2 in objective I) delivering the necessary infrastructure. The loss of the extra care scheme although would have an impact on the development proposal, the scoring in the SA would not change as the proposal would still provide a significant contribution towards meeting the housing needs of the population of Crediton and therefore objective G) meeting housing needs still scores

	+3.
New Information	
2. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they consider that the *'Policy is currently unsound – what is impact on registered parks of Shobrooke and Creedy? Landscape assessment only considers Creedy but is inadequate in terms of assessment of impacts and mitigation. Historic environment appraisal needs to assess impact upon park and garden, if concludes harm then set out mitigation measures, if cannot be mitigated need to justify allocation as per NPPF para 133 and 134.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. The HEA identifies Creedy Bridge and Cottages located to the north east. It also identifies Shobrooke Historic Park located to the east, a grade II chapel cemetery located towards the south and an area of archaeological potential which were not previously identified in the SA. The HEA also identifies Creedy Park which was previously identified in the SA. Taking the new information into account and the already identified information, the effect pre-mitigation would change the score to a -3/? from a -2 given the additional historic assets identified and uncertainty of impact on archaeological potential. The policy however already affords protection to Creedy Historic Park and Garden and provides for archaeological investigation and mitigation. The HEA noted that the north west boundary, due to its close proximity, is also vulnerable to harm. It recommends a mitigation strip of new tree planting along the full length of this boundary to reinforce the existing screening provided by trees on the edge of Creedy Park. The HEA also recognises the policy provides for landscape strips to the NE and SW sides which would provide mitigation. The policy already includes a criterion to protect TPO's and the supporting text already suggests a buffer of trees should be provided around and within the site reflecting historic planting to extend and soften the transition into the Green Infrastructure proposed. In terms of Shobrooke Park

	mitigation proposed in CRE2 is noted in the HEA, however additional mitigation in this policy is not suggested. As such the post-mitigation score remains as -1 although this is uncertain given the unknown archaeological potential element therefore overall score is considered to be -1/? which was not recognised previously. No other mitigation options are recommended.
Sustainability Appraisal Comments	
3. A representation was made during the Local Plan Review Proposed Submission consultation and noted that they *'Gypsy and Traveller Accommodation Assessment does not justify allocations on particular sites, nor is there justification or comparison of options in Sustainability Appraisal.'* MJ Gleeson c/o Bell Cornwell LLP (3775)	In response to this comment the general distribution of gypsy and traveller pitches has been assessed under the alternatives considered under S3 'Meeting Housing Needs'. Two alternatives, 'a town focussed urban extension' approach and 'rural distribution new sites' have been considered. Please see assessment under S3 with full appraisals provided in annex 3.
Changes to the Plan	
Alternative 1 is considered as a modification to the plan given it would improve have a positive impact on delivering the necessary infrastructure. Alternative 2 recognises additional historic assets not previously identified in the SA however the policy already affords mitigation recommended and no additional mitigation is recommended. Alternative 3 is considered under S3 with two alternatives for the general distribution of gypsy and traveller pitches assessed.

CRE6 Sports fields, Exhibition Road

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. 2.8 ha with 50 dwellings This alternative re-considers the allocation as set out in the options consultation and provides post-mitigation scores. This takes into account the updated methodology for the appraisals of site options (as set out in the Local Plan Review Proposed Submission SA 2015) and enables the comparison of this smaller site with the proposed submission preferred alternative.	This alternative scores very similarly to the preferred alternative given that this site has similar characteristics and location. It would score a slight positive effect (+1) rather than a positive effect on objective F) supporting retail given that the site does not propose any additional retail and the scale of the site is smaller than the proposed submission allocation. It would score less positively on objective G) meeting housing needs with a positive effect (+2) rather than significant

	positive effect given the smaller scale of development proposed. All other objectives are considered to have the same post mitigation scoring. A summary matrix is provided below.
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the conservation area some distance west of the site and a grade II listed Chapel Cemetery some distance to the north which were not previously noted in the SA. It is however considered by the HEA that development in this location would have no anticipated heritage impact.	No change to the SA.
Changes to the Plan	
No changes to the Plan are recommended. Alternative 1 provides less benefit than the proposed submission allocation and is therefore not preferred.

CRE7 Stonewall Lane

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the same heritage elements as the SA but in terms of Creedy Park it suggests mitigation through appropriate design and	The score in the SA would remain as 0/? given the mitigation is already noted in the policy.

landscaping. Appropriate design and landscaping is recognised by the policy but it is not clear that this is relation to Creedy Park. As such a change to the supporting text is proposed to clarify the requirement of appropriate landscaping to ensure protection of heritage assets associated with the adjoining Creedy Park.	
Changes to the Plan	
A change to the supporting text of the Plan is recommended to provide clarity that adequate landscaping is provided to ensure the protection of heritage assets associated with the adjoining Creedy Park.	

Summary Matrix – CRE7 Stonewall Lane

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CRE8 Barn Park

No comments under CRE8 are considered to give rise to alternatives to be considered in this annex.

CRE9 Alexandra Close

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
Sustainability Appraisal Comments	
1. The SA did not previously fully consider the impact on the high street through developing on the west of the town. Developing on the west would increase traffic through the high street as most likely destinations for journeys are either Exeter or Tiverton. Whilst some mitigation could be provided, the impact of developing sites on the east side of the town is likely to be much	This would impact the pre-mitigation score for objective I) Infrastructure, to be -1 with the post-mitigation score remaining as 0, given that the site is only for 15 dwellings. It should however also be noted that developing in the west will have an impact on the secondary/cumulative/synergistic effects where incremental development in the west of the town will have a cumulative effect on

lesser than any on the west. Officer comment	the traffic through the high street, discussed in annex 1. There would be a greater negative effect on objective H) ensuring community health and wellbeing due to the negative impact on air quality from developing to the west however given the scale of this site the score is considered to remain the same. This new information will also impact the scores for OCRE10 and OCRE11 which are discussed under 'Crediton Alternative Options' below.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – CRE9 Alexandra Park

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CRE10 Land south of A377

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'support the principle of the allocation but object to settlement limit as should be extended to fully cover the land within planning permission (ref 09/00244/MOUT); land is unquestionably suitable for a development allocation given planning history, established adjoining uses and accessible location.'* An alternative is therefore considered which includes a small area to the south of the allocation up the edge of the swale, covered by	The increase in site area would amend the SA score for objective C) mitigating the effects of climate change to a pre-mitigation score of -2/? and a post-mitigation score would remain as 0/?. This is due to the increased area of flood zone 2 and advice from the EA that there could be increased flood risk to parts of the site covered by previous outline consents (alternative 3). Mitigation can be provided by design and new information set out in alternative 2 however this is still uncertain as the extent of flood risk is unknown.

recent consent sought by Mole Avon reflecting the permission above.	
New Information	
2. A representation was made during the Local Plan Review Proposed Submission consultation and stated that the *'Policy would be sounder if it referred to the need to ensure that ground and floor levels are set at sufficiently high enough level to cater for flood risk from the River Yeo.'*	New information provided by the EA has indicated that this area is at greater risk of flooding than indicated at the time of the original permissions which covered the wider Tesco site. This new information would result in a greater negative pre-mitigation score to -2/?, however the post mitigation score would remain as 0/? as the supporting text will make reference to the latest flood data and implications from redevelopment with mitigation measures such as layout, site and floor levels.
3. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Consider the policy unsound - proposed allocation subsumes grade II listed farm complex and alters setting. Historic Environment Appraisal needed to assess the likely impact which the development will have on the listed buildings at Wellparks and Downes House Park and Garden. If concludes there is harm, provide mitigation and if still harm justify allocation as per NPPF paragraphs 133 and 134.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies Wellparks grade II listed buildings located to the north west of the site which were not previously identified by the SA. The Downes Historic Park and Garden is also identified, although this is already recognised in the SA, development was previously considered to have no impact. However the HEA notes that there would be some potential impact on the two heritage assets which were not previously identified by the SA. As such the pre-mitigation score for objective b) built and historic environment, is proposed to be changed to a negative (-2) impact rather than neutral (0). Mitigation is suggested through sensitive design with appropriate choice of materials and landscaping which

	has been included in the supporting text of the policy. The post-mitigation score therefore would remain a neutral effect.
Changes to the Plan	
Alternative 1 is proposed as a modification to the plan. Although the scoring is lower for the pre-mitigation score of objective c) mitigating the effects of climate change, it is considered appropriate and reasonable to allocate the site area which has outline consent and mitigation can be afforded to reduce the impact of flood risk. A Flood Risk Assessment will need to be submitted with any application on the site which will need to incorporate both a comprehensive level survey of the site's current arrangement, and additional modelling taking into account current levels. Alternative 2, related to alternative 1 is also proposed as a modification to the plan to reflect the new information presented by the EA which will help provide mitigation. Alternative 3 is also proposed as modification to the plan to ensure mitigation in the form of sensitive design with appropriate choice of materials and landscaping. With this mitigation the scores remain identical to the proposed submission policy site therefore a summary matrix is not provided below.	

Summary Matrix - CRE10 Land South of A377

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CRE11 Crediton Infrastructure

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that *'the policy would be more effective if 'provision of works to reduce flood risk' were included in the list.'*	This alternative would result in a greater positive impact on objective C) Mitigating the effects of climate change. Overall with the positive impact of this criterion CRE11 scores +3 post mitigation.
Changes to the Plan	
Alternative 1 is considered beneficial and therefore is proposed as a modification to the plan.	

Summary Matrix - CRE11 Crediton Infrastructure

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
Sustainability Appraisal Comments	
1. The SA did not previously fully consider the impact on the high street through developing on the west of the town. Developing on the west would increase traffic through the high street as most likely destinations for journeys are either Exeter or Tiverton. Whilst some mitigation could be provided, the impact of developing sites on the east side of the town is likely to be much lesser than any on the west. Officer comment	This would impact the scores for the alternative OCRE10 Westwood Farm in which the pre-mitigation score for objective I) Infrastructure, will be -2 and post-mitigation is considered to be -1 rather than neutral score to take into account the cumulative negative effect of traffic through the high street by developing to the west of the town. It will also impact OCRE11 Land at Chapel Down Farm in which a pre-mitigation score will be -3 and the post-mitigation score overall is considered to be -1. This takes into account existing proposed mitigation set out in the SA but the incremental negative effect of traffic through the high street. The impact of developing to the west of the town on air quality was previously considered in the SA, as such no change to the score or supporting text to objective H) is considered. Developing to the west Crediton is also discussed in annex 1 of this SA update.
Changes to the Plan	
It is considered that the comment made on the SA is beneficial to understand of the impact developing to the west of Crediton. The changes to the SA are therefore considered reasonable to include, however the amendment does not lead to any changes to the Plan.

Land at M5 Junction 27

Policy J27, Land at Junction 27 of the M5 motorway

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. On the 22nd September 2016 Full Council resolved to propose an allocation of 71 hectares between M5 Junction 27 and Willand for mixed commercial floorspace including a travel hub, agronomy visitor centre, outdoor adventure zone and outlet shopping village. The policy includes transport provision, environmental protection, a comprehensive phasing programme and public master planning exercise. In comparison to the Proposed Submission Sustainability Appraisal 96ha commercial option previously considered in the Sustainability Appraisal Proposed Submission report (2015), this commercial option encompasses a smaller site area, a number of the town centre uses have been withdrawn and new information has been provided to determine the retail impact. Taking the policy amendments and new information into account the allocation has been reappraised.	In comparison to the proposed submission M5 Junction 27 option, overall the site scores more positively for objective a) protection of the natural environment, d) safeguarded and minimising resource use and f) supporting retail. The proposed submission option scores more positively for objective h) as the option was previously considered as an alternative for a new community and provided community facilities. This is no longer proposed. Objective c) scoring has also been updated which was previously scored as a neutral although uncertain effect, upon review for both the preferred and alternative option they score a slight negative effect in considering additional trips will be generated from the development of this site.
New Information	
2. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identified that there are listed buildings close to the site and there may be some impact the immediate settings of these buildings. To	The new information has been reflected in the commentary of the Junction 27 full appraisal however the changes have not affected the scores pre or post mitigation.

some degree there will be an impact on the registered park and garden at Bridwell which is set on rising land to the east. To a limited degree the landscape settings of Sampford Peverell conservation area and the Grand Western Canal conservation area will also be affected. There is some uncertainty in the exact impact of the allocation given this will be dependent on site layouts, density, scale and design of buildings. This site occupies a substantial area within a landscape that has evidence of prehistoric and Roman activity, overall a negative and uncertain effect.	
3. A retail impact assessment has been carried out which included an assessment of 14 towns and city centres including those outside of Mid Devon District and concluded that all centres would continue to achieve higher future trading turnovers than the assessment year. The study also sets out how designer outlet villages differ from that in town centres and how they can be controlled by planning.	Given the changes proposed to the policy and the findings of the retail impact assessment, the proposal significantly enhances the retail offer of the district and therefore a significant positive impact is considered.
Sustainability Appraisal Comments	
4. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'Each score for J27 & Willand is expressed at a '?'. Because of this it is questioned whether sufficient assessment has been carried out to reach a conclusion'.* This comment is relevant to both J27 commercial and residential options.	As noted in the SA methodology, in some instances where specific data was not available at the time of the SA assessments an uncertain effect has been identified. The exact impact in some cases will only be quantified at a planning application stage where detailed site based studies are undertaken based on the proposals. However information available at the time of the SA would give an indication whether the impact would be positive or negative, the question mark recognises

Hallam Land Management (4386)	that further studies would lead to greater certainty of impact. Where uncertainty is indicated the reasons for which are provided in the commentary as part of each SA appraisal. No change is considered.
5. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'SA landscape impacts of J27 given the scale of housing should be same as growth at Cullompton'.* This comment is relevant to the J27 residential option. Hallam Land Management (4386)	A landscape and visual appraisal was undertaken in 2014 focussing on the strategic site options as set out in the Local Plan Review evidence base. Using this evidence, J27 and the strategic option at Cullompton have been scored using the landscape and visual impacts specific to each site, rather than purely based on the scale of development. No change is considered.
6. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'Conversely to J28 in part I), J27 is stated as a negative effect which remains uncertain. SA fails to have regard to the Railway station which is accessible by foot and cycle, has existing bus routes and a cycle path running through it. It is close to existing schools and services.'* This comment is relevant to both J27 commercial and residential options. Hallam Land Management (4386)	A transport assessment is required to determine the exact impact of the development on transport hence an uncertain effect. The mitigation commentary already recognises the proximity of the site to the railway station and notes the provision of a dedicated bus and pedestrian route to the station. Therefore post-mitigation the score is positive when taking these features into account, although with an element of uncertainty for reasons set out above.
7. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'In comparing J27 and J28. Both cannot be determined until a retail impact assessment is carried out, but J27 scores -3 and J28 scores +1 against the same criteria'.* This comment is relevant to J27 commercial option. Hallam Land Management (4386)	The proposal at J27 has a significant commercial element proposed in comparison to the option at J28. Early indications raised concerns from neighbouring authorities regarding the impact on existing town centres. As such, a negative score was indicated. The J28 option 'East Cullompton' does not provide the level of retail as proposed in the J27 commercial option as such the impact was not considered to be as significant. However since the Proposed Submission Sustainability

	Appraisal a retail impact assessment has been carried out which concludes that given the criterion and controls in the proposed modifications policy all centres would continue to achieve higher future trading turnovers than the assessment year and as such the SA finds that the impact on objective f) Supporting retail will therefore be positive.
8. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'J27 should score higher than J28 on D) safeguarding and minimising resource use. Reason for a -3 at J27 fall on the potential constraint on future working at Hillhead Quarry. Believe this location has questions over viability of any such extraction'.* This comment is relevant to J27 commercial option. Hallam Land Management (4386)	As indicated by the uncertain scoring and the commentary, the questions over viability of extraction of Hillhead Quarry have been noted in the SA. However in considering the smaller allocation of land at Junction 27 and the updated Devon County Council Minerals Plan (proposed for adoption) it is now considered that the development of the site will not constrain future working of the remaining permitted reserves within Hillhead Quarry.
Changes to the Plan	
Option 1 is proposed as a change to the Plan. The proposed policy of a smaller site area with the new information provided results in the improved scoring in a number of objectives including retail impact. As such it is considered the proposal is beneficial and is proposed for allocation.

Rural Areas

Bampton

BA1 Newton Square, Bampton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation by Historic England and stated *'Objection – development harms elements identified as important within Conservation Area Appraisal, which have not been considered within the Sustainability Appraisal; Historic Environment Appraisal needs to be undertaken to assess if there is harm and if so to suggest mitigation.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies the same elements as the SA in terms of objective b) protection and promotion of a quality and built and historic environment. It notes that comments from Historic England may have incorrectly located the proposed allocation as being within an orchard referenced in the conservation area appraisal when in fact it is beside it. The HEA also notes that the impact on the setting of any listed building is likely to be minimal. The SA already identifies mitigation in the policy to ensure the Conservation Area is protected. No change to the SA is proposed.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – BA1 Newton Square, Bampton

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

BA2 Stone Crushing Works (Scott's Quarry), Bampton

No comments under BA2 are considered to give rise to alternatives to be considered in this annex.

BA3 Ashleigh Park, Bampton

No comments under BA3 are considered to give rise to alternatives to be considered in this annex.

Bampton Alternative Options

School Close, Bampton (proposed for allocation BA4)

Reasonable Alternative Proposed	
1. Allocation for 0.54(ha) 26 dwellings. The site was omitted in error.	Overall the site scores a neutral or positive score with regard to the objectives considered as part of this SA with the exception of objective D) safeguarding and minimising resource use which scores a slight negative -1 due to a small proportion of the site covering agricultural grade 3 land. As this site omitted in error a full appraisal is provided in annex 3 and summary matrix is provided below.
Changes to the Plan	
Alternative 1 is proposed a modification to the plan. The site scores either a neutral or positive score in all objectives in the SA with the exception of objective D) safeguarding and minimising resource use in which a slight negative score -1 is considered due to a small proportion of the site covering agricultural grade 3 land. The site is currently allocated and was omitted in error as some of the site has been built out. For consistency, similar to other sites in the plan, the remaining area of the allocation which has not yet been built is proposed to remain as an allocation in the plan.

Bow

BO1 Land adjacent to Hollywell, Bow

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic	No change to the SA.

environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies there are many listed buildings in the centre of Bow and the village also has a conservation area which was not previously noted in the SA. However it states that these are some distance from the site which is unlikely to impact upon them.	
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – BO1 Land adjacent to Hollywell, Bow

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

BO2, West of Godfreys Gardens, Bow

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies there are many listed buildings in the centre of Bow and the village also has a conservation area which was not previously noted in the SA. However it states that these are some distance from the site which is unlikely to impact upon them.	No change to the SA.
Changes to the Plan	

No changes to the Plan are proposed.

Summary Matrix – BO2 West of Godfreys Gardens, Bow

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Bradninch

BR1 Hele Road, Bradninch

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that the site is opposite a locally listed heritage asset which was not previously identified in the SA. However, the HEA notes that although the asset's larger setting may be affected by development in this location, the asset's significance is not based on this larger setting and so the impact is low.	No change to the SA is proposed given that the impact to the heritage asset is considered to be low.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – BR1 Hele Road, Bradninch

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Chawleigh

CH1 Barton, Chawleigh

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that *'Proposed allocation has potential to harm setting of Grade 1 church and conservation area; historic appraisal needed to reassess impact, if harm concluded set out mitigation, if harm still present justify allocation.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that there are a number of listed buildings to the south and east of the site, including the grade I Church of St James which was not previously identified by the SA. The pre-mitigation score for objective b) the built and historic environment is proposed to be amended to -3/? from -2/? to take into account the potential impact on the listed building identified. The HEA suggests mitigation through high quality design of the development together with a landscape buffer on the east side of the site. If this is provided for the post-mitigation score will remain the same as 0/?
Changes to the Plan	
A change to the Plan is proposed to include an additional criterion to state 'design solutions which respects the setting of the conservation area and listed building'. An amendment to the supporting text is also proposed to ensure appropriate landscaping to mitigate any potential impact on the conservation area and listed buildings.	

Summary Matrix – CH1 Barton, Chawleigh

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Cheriton Bishop

CB1 Land off Church Lane, Cheriton Bishop

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that the listed Old Rectory is located some distance to the north as well as the Cheriton Bishop Conservation Area which was not previously noted in the SA. However the HEA notes that there is no anticipated heritage impact.	No change to the SA is proposed.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – CB1 Land off Church Lane, Cheriton Bishop

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Cheriton Fitzpaine

CF1 Barnshill Close, Cheriton Fitzpaine

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA recognises that the site forms a significant location in terms of the entry to the more historic core of the village which was not previously identified in the SA. However the HEA recommends good design will likely mean minimal impact to the setting of the listed buildings and conservation area.	This would amend the pre-mitigation score to a slight negative -1 score. If good design is recognised to minimise the impact on the conservation area and listed buildings a neutral post mitigation score remains.
Changes to the Plan	
A change to the Plan to reflect the new information presented in alternative 1 in which good design should be used to ensure minimal impact to the setting of the historic environment is proposed.	

Summary Matrix – CF1 Barnshill Close, Cheriton Fitzpaine

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

CF2 Land adjacent school, Cheriton Fitzpaine

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal

New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that *'Objects as infilling will ruin character of historic linear settlement.'*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA doesn't recognise the potential issue raised by the representation, as such no change to the SA or the Plan is proposed.
Sustainability Appraisal Comments	
2. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they '*Questions positive +1 scoring given under Objective B for CF2 'Land adj school' but absence of similar score for OCF2 'Landboat Farm' (given 0) for increasing connectivity between main village and White Cross. Also states weight given to C19 farm buildings have little remaining value as historic assets'.* Garside Planning Services (3645)	The +1 score for CF2 'Land adj school' under objective B) is to reflect the improved connectivity between White Cross and the village. It is agreed that site OCF2 would also improve connectivity between White Cross and the village and therefore the SA scoring would be changed to +1 to reflect this as set out in the table below. However it is not accepted that the historic buildings on site have no heritage value. At the time of the proposed submission SA the C19 buildings referred to in the representation were not listed as heritage assets and although were acknowledged did not hinder the score of the objective for this site. However more recent advice from the conservation team identifies that the 19th century buildings are 'pending' to be formally added to the list of heritage assets, as such if the buildings are assessed as heritage assets, the scoring of the SA will be amended to reflect this. No change to the SA with regard to CF2.
3. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Object to site and states that potential for landscape and visual impact is*	The school site (CF2) is on moderately higher ground that the objection site. However, within the context of the local landscape, both are relatively contained, with higher ground to north of

greater than OCF2 particularly at western end of the site which would be visible from public highway; development of this site would break the skyline.' Garside Planning Services (3645)	proposed allocation and to south of objection site, with few opportunities for views in from long distances. The school site is visible from the public highway, but there is existing development along the south side of the road and buildings to the east and the school to the west. These buildings screen much of the site from views and provide a degree of mitigation to visual impact. Presence of dwellings on south side of highway means that skyline when viewed (from very limited viewpoints to south) is unlikely to be significantly altered. No change to the SA is proposed.
4. A representation was made during the Local Plan Review Proposed Submission consultation and stated that there is *'No current access to site, construction of which would have negative impact on visual amenity, as opposed to OCF2 which has existing access.'* Garside Planning Services (3645)	There is a long site frontage on which to accommodate the appropriate visibility splays in a manner which minimises visual impact. This can be considered at design stage. No change to the SA is proposed.
Changes to the Plan	
None of the alternatives are preferred, as such no changes to the Plan are proposed. Alternative 2 is discussed in the table below on OCF2 Landboat Farm.	

Summary Matrix – CF2 Land adjacent school, Cheriton Fitzpaine

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Cheriton Fitzpaine Alternative Options
OCF2 Landboat Farm, Cheriton Fitzpaine

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
Sustainability Appraisal Comments	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Disagree with -2 (pre-mitigation) scoring for OCF2 'Landboat Farm' and states should be same or better than CF2 'Land adj school' which is -1 for sustainability objective A. States landscape impact is not as great as stated, given limited scope for views to Raddon Hills. States open space south of Cherry Meadow acted as visual buffer to working farm but that function no longer required given relocation of facility elsewhere. States any trees lost could be made up by planting elsewhere. Visual impact is lesser than objection site due to presence of existing access point, and mitigation provided by existing development to west and east'.* Garside Planning Services (3645)	Additional site visits to both CF2 and OCF2 has enabled a re-examination of the potential impact against Objective A 'Protection of the natural environment'. Appraisal of the potential landscape impacts of the sites conclude that they are both relatively contained within the context of the local landscape. Higher ground exists to the north of this proposed allocation and to the south of the objection site, but there are few opportunities for views into either site from public access points. Both sites have built development on their boundaries which will provide some level of mitigation. The commentary within the SA for OCF2 has been amended to reflect this revision. The potential loss of trees is still a potential negative impact for OCF2 and therefore a -1 pre-mitigation score is proposed. However, both sites already have a 0 post-mitigation score which is considered to still apply given that other policies ensure appropriate mitigation of any harmful impacts.
2. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they '*Question positive +1 scoring given under Objective B for CF2 'Land adj school' but absence of similar score for OCF2 'Landboat Farm'*	The +1 score for CF2 'Land adj school' under objective B) reflects improved connectivity between White Cross and the village. It is agreed that site OCF2 would also improve connectivity between White Cross and the village and therefore the SA scoring is proposed

(given 0) for increasing connectivity between main village and White Cross. Also states weight given to C19 farm buildings have little remaining value as historic assets'. Garside Planning Services (3645)	to be changed to +1 to reflect this for both pre and post mitigation. However it is not accepted that the historic buildings on site have no heritage value. At the time of the proposed submission SA the C19 buildings referred to in the representation were not listed as heritage assets and although were acknowledged did not hinder the score of the objective for this site. However more recent advice from the conservation team identifies that the 19th century buildings are 'pending' to be formally added to the list of heritage assets, as such if the buildings are assessed as heritage assets, the scoring of the SA will be amended to reflect this.
3. A representation was made during the Local Plan Review Proposed Submission consultation and stated *'Objective C, questions significance given to presence of Flood Zones 2 and 3 in scoring of OCF2 'Landboat Farm'. States area was only included due to arbitrary drawing of the site boundary by the planning authority. Area could be omitted from any allocation. Questions rationale for site being given negative score as opposed to CF2 'Land adj school' site'.* Garside Planning Services (3645)	In comparing the sites, OCF2 does contain Flood Zones 2 and 3 in part. The NPPF states that planning should guide development to the areas of lowest flood risk. Sequentially therefore CF2, being 100% Flood Zone 1 is preferable. The commentary does acknowledge that the areas within the flood zones in OCF2 could be excluded as set out in the post-mitigation commentary and scoring. No change is proposed.
4. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Question scoring given to Objective E 'Promoting economic growth and employment. States farm buildings are redundant, following relocation of dairy business elsewhere'.* Garside Planning Services (3645)	Additional site visits have highlighted that the farm buildings are indeed vacant and have been for some time. They are generally in a derelict state with no evidence of recent use. It is not considered that there would be a loss of employment land and the pre-mitigation score is proposed to be amended to 0. The post-mitigation score remains as 0 as mitigation in the appraisal suggested mitigation

	measures for the initially identified negative effect on this objective.
5. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Disagree with the amount of potential development possible at OCF2, Landboat Farm, given that part of site is within settlement limit, and that a similar density should be assumed to the proposed allocation to ensure like-for-like comparison'.* Garside Planning Services (3645)	Potential allocations went through a SHLAA panel process which provided recommendations on the technical capacity of each site. For consistency the same approach was used for all alternative sites. The scoring system has not 'hindered' this site in relation to the allocation CF2 'Land adj school' as both sites received a +2 post mitigation score against Objective G 'Meeting housing needs'. No change is proposed.
6. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Question - 1 score given to Objective H: Ensuring community health and wellbeing. States main reason for this is because site includes public open space which would be lost, but states as this is within settlement limit should not form part of consideration, and that loss has been overplayed. States that site could equally, as set out for CF2 'Land adj school' improve community cohesion through linking part of the village with White Cross and ensure short walking distances to school'.* Garside Planning Services (3645)	The potential loss of the public open space buffer is a consideration before mitigation. Disagree that it should not be considered as it's within the settlement limit. Its loss would present a negative impact. However on balance given the space did not form a formal designated open space area a pre-mitigation score of -1 rather than -2 was considered. In this Annex as noted in the table for CF2 above, OCF2 has community benefits of linking White Cross similar to CF2 which should be acknowledged. As a result it is proposed that the pre-mitigation score be improved to a neutral effect on balance. A post-mitigation score of +1 is now proposed provided that the loss of public open space can be mitigated.
7. A representation was made during the Local Plan Review Proposed Submission consultation and stated that they *'Question - 1 score given to pre-mitigation score for Objective I: Delivering the necessary infrastructure, compared with 0 for CF2 'Land adj school' when conclusion is that an adequate access is achievable for both'.* Garside Planning Services (3645)	The original site assessment was based on advice at the time that OCF2 would require additional works due to the restrictive alignments. However further site visits to both sites has identified that both sites can equally accommodate an access without significant works. Therefore an amendment is proposed to the pre-mitigation score to 0. The post-mitigation score remains as 0.

Changes to the Plan
No changes to the plan are proposed. The Local Plan Review allocates sufficient land for residential development to meet the district's housing need. The site scores similarly to the preferred alternative CF2 however the preferred alternative is sequentially preferable given that it's 100% Flood Zone 1 and avoids any loss of public open space. Although only two post-mitigation scores were slightly amended following the comments on above, a number of pre-mitigation scores have been changed, as such for clarity a full appraisal is provided in annex 3.

OCFNEW Bramble Orchard, Cheriton Fitzpaine

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation which objected to plan allocations and submitted new land for housing and provision of alternative footpath for school use.	A full site appraisal has been provided for this option which can be found in annex 3 with a summary of scores provided below. The site scores more negatively than the preferred sites in Cheriton Fitzpaine on Objective A) protection of the natural environment, B) built and historic environment H) community health and well being and I) delivering the necessary infrastructure. The site is not preferred given there is likely to be a detrimental impact on the landscape and is divorced from the main settlement. There are also concerns around the provision of delivering the necessary infrastructure in which the topography and road widths result in a poor forward visibility from the site. The highway authority advises that the site should be rejected accordingly.
Changes to the Plan	
No changes to the plan are proposed. The highway authority advises that this site should be rejected.

Halberton

HA1 Land adjacent Fishers Way, Halberton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and stated that *'Site is less preferable to 'The Pethers' which is not within an area of archaeological potential, not at risk of flooding from groundwater or Grand Western Canal, and has better access to road network.'*	The site 'The Pethers' has been appraised and discussed in a table below. New information for HA1 with regard to the area of archaeological potential since the Proposed Submission Local Plan Review SA has been made available. The Devon County Council Archaeology Team has confirmed that the scale and situation of the proposed allocation will not impact on any known heritage assets and state that they would not need to be consulted should an application come forward. Therefore both the pre-mitigation and post-mitigation scores have been amended to result in a less negative score to reflect this new information. The overall the pre-mitigation score is considered to be a slight negative impact given the potential impact on the conservation area as discussed in alternative 2 below. If mitigation is provided a post-mitigation neutral score remains although this is no longer uncertain.
2. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA recognises some potential impact on the setting of the Halberton	This new information would affect the pre-mitigation score in which taking into account new information presented in alternative 1 above and the new information in this alternative an overall slight negative (-1) score is considered. If mitigation through appropriate design, materials and landscaping is proposed a post-mitigation score of 0

Conservation Area which was not previously identified by the SA. The HEA recommends appropriate design, materials and landscaping as mitigation to protect the setting of the conservation area.	remains.
Changes to the Plan	
A change to policy HA1 is proposed to delete reference to the need to 'archaeological investigations and appropriate mitigation measures' given the new information provided by the Devon County Council Archaeology Team that the proposed allocation will not impact on any known heritage assets and state that they would not need to be consulted should an application come forward. A change to the supporting text of HA1 is proposed to ensure mitigation through appropriate design, materials and landscaping to protect the setting of the Halberton conservation area and historic environment.

Halberton Alternative Options

OHA1 Land at Blundells Road, Halberton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
Comments on Sustainability Appraisal	
1. A representation was made during the Local Plan Review Proposed Submission consultation and commented on the post mitigation score for objective A *'Disagree that screening should result in a mitigation score of 0'.* Individual (4447)	The mitigation score references S9 Environment and DM1 High Quality Design policies in the Local Plan Review. Screening may form part of the mitigation but would also include other criteria as set out in S9 and DM1. Policies in the Local Plan Review would be considered alongside any potential allocation, these policies provide mitigation of impacts to protect the natural environment; as such it was considered that there should be an improvement of the score of -1 pre-mitigation to 0 post-mitigation. No change is proposed.
2. A representation was made during the Local Plan Review Proposed Submission consultation and commented on the post mitigation score of objective B. *'The level of listing should be considered and argue that it is difficult to be confident of the outcome as there are unknowns through the mitigation elements of design and archaeological investigation'.* Individual (4447)	The listed buildings within the site have been considered as part of the impact on objective B. The 'level of listing' isn't considered to impact the scoring which is consistent with other appraisals in the SA although the presence of listed buildings has affected the pre-mitigation score. The post-mitigation score suggests that with appropriate mitigation a neutral score could be accomplished, however it is recognised there is a level of uncertainty particularly in considering the outcomes of the archaeological investigation which is recognised by '?' in the post-mitigation scoring column. No change is considered.
3. A representation was made during the Local Plan Review	The score referred to by the individual is the post-mitigation score.

Proposed Submission consultation and commented on the post mitigation score of objective B. *'Disagree with the equal scoring of Halberton, Land at Blundells Road and the preferred HA1 site for objective B as Halberton, Land at Blundells Road is within the Halberton conservation area and within the view of a grade II* listed building'.* Individual (4447)	Each site is different, and have different elements identified in objective B which covers a range of potential issues. The original scores and commentary recognises Halberton, Land at Blundells Road being within the conservation area and potential impact on nearby listed buildings. The equal scoring of the two sites following mitigation is due to responses which can help mitigate each impact. Although the impacts are different it was considered that it was possible to provide mitigation for each potential impact. No change is proposed.
4. A representation was made during the Local Plan Review Proposed Submission consultation and commented on the post mitigation score of objective C. *'Do not agree with the +1 score as there is an unknown impact and the benefits of the bus service should not improve the score'.* Individual (4447)	The scoring identifies that inherent with the watercourse there is a level of uncertainty through the indication of a '?'. The post-mitigation +1 score was provided as mitigation could neutralise the impact of the watercourse and the bus service was considered as a slight benefit of the location of the site. Consistent with other sites appraised in the SA, recognising the provision of a bus service in rural areas helps to differentiate between similar sites across Mid Devon, with some in locations with a bus service and others without. As the objective is considering climate change, the availability of sustainable modes of transport is an appropriate consideration in the sustainability of a site location. No change is considered.
5. A representation was made during the Local Plan Review Proposed Submission consultation and commented on the post mitigation score of objective I. *'Disagree that the post mitigation score should be 0 as it is unknown even if it is accompanied with a question mark'.* Individual (4447)	The post-mitigation score and commentary is to help identify whether the impact of the development can be mitigated and improve the overall score of the site. In this case the score post-mitigation was 0 based on the factors that could help reduce the impact of the development. A question mark is also used to recognise that there is some uncertainty until further detail is provided. No change is

	considered.
Changes to the Plan	
None of the comments above are considered beneficial, therefore no change to the Plan or the SA scoring is proposed.	

Summary Matrix – OHA1 Land at Blundells Road, Halberton

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

OHANEW The Pethers, Halberton

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
Comments on Sustainability Appraisal	
1. A representation was made during the Local Plan Review Proposed Submission consultation and commented that they *'object to the inclusion of HA1 site and offers preferable alternative'*. Compares site with Sustainability Appraisal scoring of HA1 Site. Argues that the new site is preferable over proposed allocation as has less archaeological potential, less likelihood of flooding and better access. Garside Planning Services (3645)	A full appraisal of the site has been undertaken which can be found in annex 3 with a summary matrix provided below. The site scores similarly to HA1. A benefit to HA1 is that it has an existing access whereas this new site does not although the scores in the SA remain the same for the post-mitigation score in objective I) Delivering the necessary infrastructure as access can be achieved for this site.
Changes to the Plan	
HA1 was identified as the preferred site of Halberton Parish Council and the Local Plan Review allocates sufficient land for residential development to meet the district's housing need. No change is therefore proposed as the site is not preferential in replacement of the preferred site.

Hemyock

HE1 Depot, Hemyock

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and brought forward new information in which *'Family member resident on site wishes to*	Given representations made during the Local Plan Review Proposed Submission (2015) consultation, the site is proposed for deletion as comments made raises an issue with the potential deliverability of the

see it developed, but not in near future. Does not currently consider site deliverable due to third party access issues and landowners intention to continue trading'.	site and therefore the site is no longer considered a reasonable alternative. The site will have a limited impact on the Local Plan Review as a whole given its size and may still come forward as a windfall site as it falls within the settlement limit. This will have a limited impact on the sustainability of the plan as a whole given the scale of the site.
Changes to the Plan	
HE1 is proposed to be deleted from the plan as it is no longer considered a reasonable alternative given the representations made during the Local Plan Review questions its deliverability.	

Summary Matrix – HE1 Depot, Hemyock

A summary matrix is not provided, the new information presented raises questions over the deliverability of the site and is proposed for deletion. This will have a limited impact on the sustainability of the plan as a whole given the scale of the site.

Morchard Bishop

No reasonable alternatives are proposed for allocations in Morchard Bishop.

Newton St Cyres

NE1 Court Orchard, Newton St Cyres

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential	The impact on the conservation area would amend the pre-mitigation score from -1/? to a -2/? score to take into account the potential detrimental impact on the setting and approach to the conservation

development and suggests mitigation where appropriate. The HEA notes that the site lies adjacent to the recently extended boundary of the Newton St Cyres conservation area. This was not previously identified in the SA. The HEA suggests that the proposed site would have a detrimental impact on the setting and approach of the conservation area. It suggests that access into the site will need careful design and landscaping to link in with existing trees and hedges together with good design and appropriate materials would offset much of the visual impact. It also notes that grade II Lower Creedy Bridge lies to the north. This was not previously identified in the SA, however it notes that the setting of Creedy Bridge does not appear to be compromised.	area. With mitigation through careful design of the access and landscaping to link with existing trees and hedges the 0/? post-mitigation score remains. The uncertain effect is due to the archaeological potential already identified in the SA.
Changes to the Plan	
A change the policy and supporting text is proposed to ensure design which respects the setting of the conservation area.	

Summary Matrix – NE1 Court Orchard, Newton St Cyres

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Newton St Cyres Alternative Options

ONENEW New Estate Site A, Newton St Cyres

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and submitted additional land which was argued to have *'no significant constraints and is*	A full appraisal of the site has been undertaken which can be found in annex 3 with a summary matrix provided below. The site scores lower in comparison to the preferred site in Newton St Cyres in objective I)

immediately available and deliverable'.	providing the necessary infrastructure. Of particular note are the concerns around access and safety with the highways authority recommending this site be rejected on those grounds. The site is therefore not preferred.
Changes to the Plan	
No changes are proposed to the Plan. The site is not preferred with particular issues around access and safety with the highways authority recommending this site be rejected on those grounds.

Sampford Peverell

SP1 Former Tiverton Parkway Hotel, Sampford Peverell

No comments under SP1 are considered to give rise to alternatives to be considered in this annex.

OSP1 Higher Town, Sampford Peverell (Proposed for allocation SP2)

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. National planning policy acknowledges the importance of ensuring housing numbers and employment opportunities are considered	In comparison to the alternative considered during the Local Plan Review Proposed Submission (2015) this alternative scores more

in tandem. In response to this full Council on 22nd September 2016 resolved to allocate land at Higher Town for residential development of 60 dwellings. The policy has been amended to reflect the latest evidence and has been reappraised taking these findings into account. A full appraisal has been provided in Annex 3 and a summary matrix is provided below.	positively or the same in all aspects. The new appraisal takes into account new information in which there has been confirmation that access is achievable. Criteria have been included in the policy to ensure landscaping and design respects the setting and character of the area, conservation area and listed building. These elements were already noted in the proposed submission SA as such most of the scores remain the same.
New Information	
2. Since the Proposed Submission Sustainability Appraisal there has been confirmation that access is achievable and therefore the uncertainty has been removed.	This new information removes the uncertainty previously attached to objective I) delivering the necessary infrastructure and the score is now proposed to be neutral.
3. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA identifies that the site is adjacent to Sampford Peverell Conservation Area to North East. The site occupies an area enclosed in the medieval period and archaeological remains associated with the earlier field system and archaeological remnants may be affected by development here.	The SA recognises the impacts identified in the HEA and provision in the policy is provided to ensure mitigation.
Changes to the Plan	
A change to the Plan is proposed to include SP2 Higher Town allocation.

Sandford

SA1 Fanny's Lane, Sandford

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and commented that a *'Historic environment appraisal is required to assess impact of development*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and

on listed church and conservation area, if concludes harm to set out mitigation, and if harm remains need to justify public benefits'.	suggests mitigation where appropriate. It identifies the same elements in the SA and suggests the same recommendation for mitigation to ensure a buffer strip of open space or planting to protect the setting of the listed Park House and Sandford Conservation area. Good design is also recommended to avoid the domination of views and to retain the setting of the historic core of the church in particular which already forms a criterion in policy. Therefore no change is proposed to the SA or the Plan.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – SA1 Fanny's Lane, Sandford

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Silverton

SI1 Land at Old Butterleigh Road, Silverton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A representation was made during the Local Plan Review Proposed Submission consultation and commented that they *'Object as development would lead to loss of old Devon hedge and/or destroy historically important part of village'.*	A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA does not identify the elements raised in the representation and notes that there is no anticipated heritage impact. No change to the SA is proposed.

Changes to the Plan
No changes to the Plan are proposed.

Summary Matrix – SI1 Land at Old Butterleigh Road, Silverton

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

SI2 The Garage, Silverton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
New Information	
1. A Historic Environment Appraisal (HEA) has been undertaken which seeks to bring together information about the historic environment. It assesses the significance and harm of potential development and suggests mitigation where appropriate. The HEA notes that the site is no longer in the conservation area (following a 2015 revision) but now lies to the south west of the boundary. It also notes that 'Channons' in close proximity is likely to become a locally listed heritage asset. The HEA overall states that there is no anticipated heritage impact.	Given the new information set out in the HEA the pre-mitigation score is proposed to change from a negative (-2) to a slight negative (-1) score for objective B. A post-mitigation slight negative (-1) score remains due to the location of the site divorced from the main body of the village as discussed in the proposed submission SA.
Changes to the Plan	
No changes to the Plan are proposed.	

Summary Matrix – SI2 The Garage, Silverton

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

Thorverton

TH1 South of Broadlands, Thorverton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. Alternative for 1.15 ha and 20 dwellings. A representation was made during the Local Plan Review Proposed Submission consultation which suggested that the *'site area should be extended to incorporate allotment land, which could be provided elsewhere (subject to demand); could increase housing provision, make use of existing access and omit need for road widening/footpath creation and loss of hedgerow'*. In response to this representation an alternative of 1.15 ha including the allotment land to the west for a total of 20 dwellings has been considered.	The pre-mitigation score for this alternative scores lower in objective H) ensuring community health and wellbeing due to the loss of allotments, and I) delivering the necessary infrastructure due to a need for the road to be built to an adoptable standard and the access road would need to go through garages currently near the site. The issues identified could be mitigated in which this site scores almost identically to the proposed submission site, however there is greater uncertainty in this mitigation. If the relocation of the allotments is provided for this would result in a +1/? post-mitigation score for objective H). This is uncertain given that the site for the relocation of the allotments has not been indicated. If road improvements were made the issues identified in objective I) could be mitigated however this is uncertain given that this requires the garages are in control of the applicant, given the garages are not in control of the applicant an uncertain effect remains. Furthermore the mitigation required is much greater than the preferred policy which could make this option prohibitive.
Changes to the Plan	
Alternative 1 is not preferred. Although this site scores an identical post mitigation score as the preferred site, greater mitigation would be required to enable this alternative to be acceptable and there is greater uncertainty in the delivery of this site. The option to avoid the	

relocation of allotments is preferable and the mitigation required for the road improvements has the potential to make this option prohibitive when compared with the proposed access set out in the preferred approach. The mitigation for the road improvements for the alternative option would also need the garages to be in control of the applicant, which they are currently not.

Thorverton Alternative Options

OTHNEW Land north east of Silver Street, Thorverton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review	A full appraisal of the site has been undertaken which can be found in

Proposed Submission consultation and submitted additional land which was argued to have *'no significant constraints and is immediately available and deliverable'.*	annex 3 with a summary matrix provided below. The site scores similarly to the preferred site. It scores slightly more positively on objective c) mitigating the effects of climate change and slightly less positively on objective h) ensuring community health and well-being. Although there does not appear to be significant sustainability issues with this site individually, the cumulative impact of allocating this site in addition to the site preferred in the Local Plan Review could lead overcapacity issues in the local schools.
Changes to the Plan	
No changes are proposed to the Plan. The Local Plan Review allocates sufficient land for residential development to meet the district's housing need. The addition of this site in Thorverton could lead to a negative cumulative impact on the capacity of local schools.

OTHNEW Land to the west of Lynch Close and Cleaves Close, Thorverton

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and submitted additional land which was argued to have *'no significant constraints and is immediately available and deliverable'.*	A full appraisal of the site has been undertaken which can be found in annex 3 with a summary matrix provided below. The site scores similarly to the preferred site. It scores slightly more positively on objective g) meeting housing needs and slightly less positively on objective h) ensuring community health and well-being. The site proposes more housing development than other options in Thorverton, as such it may not be possible to accommodate the number of pupils arising from the development in the existing school and developer contributions would be required for expansion. Although there are opportunities for mitigation the impact on the adjoining grade II listed building may be a constraint for the site.
Changes to the Plan	
No changes are proposed to the Plan. The Local Plan Review allocates sufficient land for residential development to meet the district's housing need. The site is less preferred given the potential impact on the capacity of the primary school and the impact on the listed building adjoining, although it is noted there are options for mitigation.

Uffculme Alternative Options

OUF3 – Land west of Uffculme

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Land with a gross site area of 3.49 (ha) for 60 dwellings, 35% affordable.	The site has been reappraised given the conclusions of the inspectors report. A full appraisal can be found in Annex 3. The site scores more

This alternative has been considered following an appeal decision in February 2016 allowing outline planning permission for a site of 3.49ha with 60 dwellings.	positively to the Proposed Submission SA appraisal in post-mitigation scores in objective b) built and historic environment; taking into account the inspectors comments a neutral effect is considered rather than a negative effect. It also scores more positively in objective h) Ensuring community health and wellbeing taking into account the Inspector's comments. A neutral rather than a slight negative effect is considered.
Sustainability Appraisal Comments	
1. A representation was made during the Local Plan Review Proposed Submission consultation and commented on objective B) protection and promotion of a quality built and historic environment. *'Recent application refused but consultation response from Devon County Council [on archaeology] advises imposition of a condition. Therefore this [archaeology] is not an issue that strikes at the principle of development of the site'.* Messrs Persey and Harding c/o Jillings-Hutton (4654)	The condition requested refers to archaeological considerations. This has been reflected in the post-mitigation score for objective B. The score for objective B considers various elements related to the built and historic environment including but not limited to archaeology. No change is proposed with regard to the comment on archaeology however it should be noted that for objective B) built and historic environment, in taking into account the inspectors comments as discussed in alternative 1 a neutral effect is considered rather than a negative effect. A full appraisal is provided in annex 3 and summary matrix is provided below.
2. A representation was made during the Local Plan Review Proposed Submission consultation and commented on objective C) mitigating the effects of climate change. *'Recent application refused but consultation response from Environment Agency highlights no objection. None of proposed housing within application was on flood zone 2 or 3'.* Messrs Persey and Harding c/o Jillings-Hutton (4654)	The scoring when considering flood zones is set out on page 193 of the Proposed Submission SA. The SA aims to apply a consistent approach to scoring across the various sites proposed in Mid Devon. In this case some areas of the site fell within in areas of flood zone 2 and 3 and therefore initially scored slightly lower than other sites which did not include any areas of flood zone 2 or 3. However the site was redrawn to exclude areas in flood zone 2 or 3. This was reflected

	in the post-mitigation score for objective C 'mitigating the effects of climate change'. No change is proposed with regard to the comment in alternative 2.
3. A representation was made during the Local Plan Review Proposed Submission consultation and commented on objective H) ensuring community health and wellbeing. *'Disagree that a walk to school of around a mile is adverse. Site is not preferred in SA as would lead to long walking distances to village facilities'.* Messrs Persey and Harding c/o Jillings-Hutton (4654)	As noted by the commentary of the SA it is considered that the location of the site is approximately 1 mile to the primary school which could restrict young children walking to school. The Institute for Highways and Transportation Guidelines for 'acceptable' walking distances, state that for education up to 500m is the preferred distance and up to 1km is an acceptable distance. The nearest edge of the proposed site to the school is almost 1.5km to the primary school. Therefore at the time of appraising the site it was considered appropriate that a slight negative effect is considered in relation to this objective. However the site has been reappraised following the 2016 appeal decision, in which the Inspector stated that in his view the appeal site was within an acceptable and safe walking distance of the village services and facilities. As such overall a neutral effect rather than slight negative effect is considered for objective H) ensuring community health and wellbeing.
Changes to the Plan	
A change to the Plan is proposed to allocate the site as set out in the appeal decision discussed in alternative 1.

Willand

WI1 Land east of M5, Willand

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Alternative of 14.8ha of 174 dwellings. A representation was made during the Local Plan Review Proposed Submission consultation which suggested that the *'allocation should be increased to 174 dwellings - is stated to be suitable, available and deliverable with no technical or*	A full appraisal is provided in annex 3 and a summary matrix is provided below. The proposed alternative scores lower overall on objectives A) protection of the natural environment, D) safeguarding and minimising resource use and H) ensuring community health and wellbeing. The alternative scores more positively on objectives E)

landownership constraints; represents 'infill' between M5 and remainder of village; appropriate buffer zone and planting, as well as protection of habitats would be required' In response to this representation, the site area proposed in the submission was used to determine the area of the site and an alternative allocation of 14.8ha of 174 dwellings has been considered.	promoting economic growth and employment and G) meeting housing needs.
Changes to the Plan	
Alternative 1 is not preferred, although there are some benefits to this alternative in terms of meeting housing needs and a slight positive impact on promoting economic growth and employment, the scale of development results in a greater negative scores on a number of objectives and in terms of a strategic preferred approach, development of this scale in the villages would not reflect a sustainable pattern of distribution in accordance with the NPPF. The cumulative impacts in rural areas are also heightened particularly when large scale development is proposed in villages for example on the road infrastructure or primary school capacity.

WI2 Willand Industrial Estate

Reasonable Alternative Proposed	**Impact on the Sustainability Appraisal**
1. Full allocation of 9.2ha 22,000 sqm of commercial floorspace. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'proposed deletion of remainder of phase 1 commercial is premature, removal of phase 2 is understood, though the site may be used to relocate a nearby business'.*	This alternative scores slightly less positively on objective A) protection of the natural environment as it is a larger site abutting the M5 and therefore will be more visible. However it scores higher in objective E) promoting economic growth and employment as it provides more commercial floorspace. An error was found in the assessment for the preferred site in the Proposed Submission SA

In response to this representation the original allocation has been reconsidered. The Proposed Submission SA did not provide a full site appraisal for the full allocation given the preferred allocation formed part of the original site. Therefore in reconsidering this alternative a summary matrix is provided below with full appraisal provided in annex 3.	where the 2.2ha site proposed for 8,800 should have scored a +2 not +3 as set out in the appraisal guidance p.192 of the SA. A summary matrix is provided below.
2. Allocation as residential development. Representations were made during the Local Plan Review Proposed Submission consultation which suggested the site would be appropriate for residential development. In response to these representations an alternative of WI2 Willand Industrial Estate allocated as a residential development has been considered for 53 dwellings	This alternative would result in a less positive scores in in objective B) protection and promotion of the built and historic environment, E) promoting economic growth and employment and H) ensuring community health and wellbeing. The alternative scores more positively on objective G) meeting housing needs. A full appraisal is provided in annex 3 and summary matrix is provided below.
Changes to the Plan	
Alternative 1 is a proposed as a modification to the plan. The Council's original reasons for not allocating the full site have been addressed as the remainder of the site is now deliverable, with access to Phase 2 having been secured. The viability of delivering employment units in this location, which was another of the Council's concerns, is addressed by information provided as part of the proposed submission consultation. A planning application has also been submitted covering the entirety of phase 2. Given the likely development of the site and the benefit of providing additional commercial floorspace on objective E) promoting economic growth and employment it is considered beneficial to allocate the full site. Alternative 2 is not preferred. The site is not suitable for residential development, being surrounded on three sides by existing and forthcoming employment development.

Reasonable Alternative Proposed	Impact on the Sustainability Appraisal
1. A representation was made during the Local Plan Review Proposed Submission consultation and noted that *'DM28 SA should include compensatory measures as part of policy.'* Environment Agency (943)	This comment was made on the SA however the comment is more relevant to a change to the policy within the Plan rather than the SA. Compensation would result in a neutral effect on the environment in which the proposed alternative would not result in any change to scoring of the SA.
Changes to the Plan	
Although the proposed change would not impact on the SA score it is considered that the comment is beneficial and an amendment to the policy is proposed to set out that compensatory measures in some cases may be considered appropriate where mitigation measures are not possible.	

Summary Matrix – DM28 Other protected sites

None of the alternatives are considered to give rise to any change to the post-mitigation SA scoring.

DM29 Enforcement

No comments under DM29 are considered to give rise to alternatives to be considered in this annex.

Miscellaneous

Sport England provided a response as part of the Local Plan Review Proposed Submission Consultation (2015) in which they suggested an alternative to the following policies to reflect Active Design principles and implementation:

- S1 Sustainable Development priorities
- S9 Environment
- TIV1 Eastern Urban Extension
- TIV6 Farleigh Meadows
- CU1 NW Cullompton
- CU7 East Cullompton
- DM1 High Quality Design
- DM12 Design of Housing

It is considered that the relevant principles are already generally reflected in the plan policies, for example S1, S5 and DM1. Reference to all active design principles in the policies above would be unnecessary and out of context and therefore is not preferred. This has not been appraised as it is considered the active design principles are already incorporated and would not overall amend the sustainability of the Local Plan.

Annex 3 Additional Reasonable Alternative Appraisals

This annex sets out the full appraisals undertaken as part of this Sustainability Appraisal update.

Strategic Policies

Additional Appraisals for S2 Amount and Distribution of development

Preferred Option S2: Amount of Residential Development - Meet Housing Need with Junction 27 additional housing requirements (7,860 dwellings)

This option for the amount of residential development is to meet the objectively assessed housing needs over the plan period following the latest SHMA figure which identifies a need of 7600 dwellings rather than the 7200 as previously indicated in the proposed submission document. It also provides for the additional housing in response to the employment allocation at Junction 27 which is a preferred policy option in this Local Plan Review. The sustainability of the 7860 alternative is considered to fall between alternatives 7600 and 8000 which are assessed below. However the proposed change to the housing amount is not considered significant enough to enable a meaningful comparison; as such it is considered that the alternative of 7860 will score the same as the option to meet the objectively assessed housing need of 7600. A full appraisal is provided below for completeness.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This is a housing target set at a level to meet the objectively assessed need of Mid Devon with two additional sites in response to the housing requirements of allocating the Junction 27 commercial option. It is capable of being met without negatively impacting significantly on the existing environmental limits of the districts towns and villages. The SHLAA has identified a sufficient number of alternative sites to avoid adverse environmental impact. The level of impact on this objective will be dependent on individual proposals but is considered to be neutral in this scenario.	0	The policy should be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
B) Protection and promotion of a quality built and historic environment	This approach will have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality design which supports the positive contribution of new development to local character.	0
C) Mitigating the effects of climate change	The construction of new homes and catering for a greater population can increase carbon emissions; however there may be opportunities by meeting housing needs to enhance features such as walking and cycling provision for the community as a whole. Opportunities to reduce flood risk; promote low carbon or renewable energy and create low carbon buildings also arise. This option may have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies such as sustainable design.	0
D) Safeguarding and minimising resource use	A housing target set at a level to meet the objectively assessed need of Mid Devon with the additional housing required in response to the allocation of Junction 27 is capable of being met while still safeguarding and minimising resource use. The SHLAA has identified some alternative sites on brownfield land but will still require the loss of some of the highest grades of agricultural land if development is	-2	This policy should be read in the context of other policies in the plan, for example sustainable design. A negative effect is anticipated post mitigation.	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	directed towards the towns. The level of impact on this objective will be dependent on individual proposals but is considered to be negative in this scenario.			
E) Promoting economic growth and employment	An increase in residential development would benefit the local economy and increase the number of local people to the working pool. A positive impact.	+1		+1
F) Supporting retail	This policy will have a positive contribution towards achieving this objective as an increase in population would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres.	+1		+1
G) Meeting housing needs	This policy will have a significant positive contribution towards achieving this objective. The key purpose of this policy is to meet the housing needs of the district. The policy meets the objectively assessed housing needs target of 7,600 as well as the additional housing requirement in response to the proposed allocation at Junction 27. It also promotes balanced communities by encouraging an appropriate mix of housing such as affordable housing, housing designed for the elderly and gypsy and traveller pitches.	+3	This option should also be read in the context of other policies in the plan which aim to meet the demand for services and facilities of the community.	+3
H) Ensuring community health and wellbeing	The policy helps to reduce barriers to housing by meeting the diverse housing needs of the district and is therefore likely to have at least a minor positive contribution to this objective. The option does not however proactively aim to meet the variety of indices in this option.	+1	The option should however be read in the context of other policies which support community health and	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	The impact on the provision of open space, limiting air, noise and light pollution and promoting safe and secure environments is unknown.		wellbeing.	
I) Delivering the necessary infrastructure	A housing target set at a level to meet the objectively assessed need of Mid Devon with the additional housing requirement in response to the Junction 27 option is capable of being met without negatively impacting on the delivery of necessary infrastructure. The two additional sites at Blundells School, Tiverton and Higher Town, Sampford Peverell are able to provide the infrastructure required in-step with development. Transport evidence confirms a new junction onto the M5 at Cullompton is technically feasible and that infrastructure requirements can be met. This policy approach could have some positive or some negative impacts on delivering the necessary infrastructure. The level of impact will be on a site by site basis.	0	The policy should be read in the context of other policies which aim to deliver the necessary infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan.	0

Secondary/cumulative/synergistic effects:	A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Alternative Option S2: Amount of Residential Development - Meet Housing Need (7,600 dwellings)

This option for the amount of residential development is to meet the objectively assessed housing needs over the plan period following the latest SHMA figure which identifies a need of 7600 dwellings rather than the 7200 as previously indicated in the proposed submission document.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This housing target is set at a level to meet the objectively assessed need of Mid Devon is capable of being met without negatively impacting on the existing environmental limits of the districts towns and villages. The SHLAA has identified a sufficient number of alternative sites to avoid adverse environmental impact. The level of impact on this objective will be dependent on individual proposals but is considered to be neutral in this scenario.	0	The policy should however be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved.	0
B) Protection and promotion of a quality built and historic environment	This approach will have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality design which supports the positive contribution of new development to local character.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	The construction of new homes and catering for a greater population can increase carbon emissions; however there may be opportunities by meeting housing needs to enhance features such as walking and cycling provision for the community as a whole. Opportunities to reduce flood risk; promote low carbon or renewable energy and create low carbon buildings also arise. This option may have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies such as sustainable design.	0
D) Safeguarding and minimising resource use	A housing target set at a level to meet the objectively assessed need of Mid Devon is capable of being met while still safeguarding and minimising resource use. The SHLAA has identified some alternative sites on brownfield land but will still require the loss of some of the highest grades of agricultural land if development is directed towards the towns. The level of impact on this objective will be dependent on individual proposals but is considered to be negative in this scenario.	-2	This policy should be read in the context of other policies in the plan, for example sustainable design. A negative effect is anticipated post mitigation.	-2
E) Promoting economic growth and employment	An increase in residential development would benefit the local economy and increase the number of local people to the working pool. A positive impact.	+1		+1
F) Supporting retail	This policy will have a positive contribution towards achieving this objective as an increase in population would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	This policy will have a significant positive contribution towards achieving this objective. The key purpose of this policy is to meet the housing needs of the district. The policy meets the objectively assessed housing needs target of 7,600 and promotes balanced communities by encouraging an appropriate mix of housing such as affordable housing, housing designed for the elderly and gypsy and traveller pitches.	+3	This option should also be read in the context of other policies in the plan which aim to meet the demand for services and facilities of the community.	+3
H) Ensuring community health and wellbeing	The policy helps to reduce barriers to housing by meeting the diverse housing needs of the district and is therefore likely to have at least a minor positive contribution to this objective. The option does not however proactively aim to meet the variety of indices in this option. The impact on the provision of open space, limiting air, noise and light pollution and promoting safe and secure environments is unknown.	+1	The option should however be read in the context of other policies which support community health and wellbeing.	+1
I) Delivering the necessary infrastructure	A housing target set at a level to meet the objectively assessed need of Mid Devon is capable of being met without negatively impacting on the delivery of necessary infrastructure. Transport evidence confirms a new junction onto the M5 at Cullompton is technically feasible and that infrastructure requirements can be met. This policy approach could have some positive or some negative impacts on delivering the necessary infrastructure. The level of impact will be on a site by site basis.	0	The policy should be read in the context of other policies which aim to deliver the necessary infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan.	0

Secondary/cumulative/synergistic effects:	A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC. As such a policy option which has less development proposed is considered reach the similar conclusions.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Alternative Option S2: Amount of residential development - Lower growth scenario (7,200 dwellings).

The development needs of the community will be met through the provision of approximately 7,200 dwellings between 1 April 2013 and 31 March 2033. This would be a slightly lower growth scenario than the 7,600 figure to meet the objectively assessed housing needs as indicated in the SHMA. This figure was originally published before the final figures of the SHMA were set. As such the SA has been amended to reflect the deficit of 400 dwellings over the plan period to meet the objectively assessed housing need of Mid Devon when pursuing this scenario.

Sustainability objective	**Commentary**	**Impact**	**Mitigation**	**Post Mitigation**
A) Protection of the natural environment	A housing target set at a level slightly lower than the objectively assessed need of Mid Devon is capable of being met without negatively impacting on the existing environmental limits of the districts towns and villages. The SHLAA has identified a sufficient number of alternative sites to avoid adverse environmental impact. The level of impact on this objective will be dependent on individual proposals but is considered to be neutral in this scenario.	0	The policy should however be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			and geodiversity sites are conserved.	
B) Protection and promotion of a quality built and historic environment	This approach will have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality design which supports the positive contribution of new development to local character.	0
C) Mitigating the effects of climate change	The construction of new homes and catering for a greater population can increase carbon emissions; however there may be opportunities by meeting housing needs to enhance features such as walking and cycling provision for the community as a whole. Opportunities to reduce flood risk; promote low carbon or renewable energy and create low carbon buildings also arise. This option may have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies such as sustainable design.	0
D) Safeguarding and minimising resource use	This housing target is capable of being met while still safeguarding and minimising resource use. The SHLAA has identified some alternative sites on brownfield land but will still require the loss of some of the highest grades of agricultural land if development is	-2	This policy should be read in the context of other policies in the plan, for example sustainable design. A	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	directed towards the towns. The level of impact on this objective will be dependent on individual proposals but is considered to be negative in this scenario.		negative effect is anticipated post mitigation.	
E) Promoting economic growth and employment	An increase in residential development would benefit the local economy and increase the number of local people to the working pool. A positive impact	+1		+1
F) Supporting retail	This policy will have a positive contribution towards achieving this objective as an increase in population would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres.	+1		+1
G) Meeting housing needs	This policy will have a positive contribution towards achieving this objective. The policy meets a significant proportion of the housing needs of the district but not the whole need and therefore has a positive impact rather than significant positive impact. The housing needs target of 7,200 promotes balanced communities by encouraging an appropriate mix of housing such as affordable housing, housing designed for the elderly and gypsy and traveller pitches.	+2	This option should be read in the context of other policies in the plan which aim to meet the demand for services and facilities of the community.	+2
H) Ensuring community health and	Helps to reduce barriers to housing by meeting the diverse housing needs of the district and is therefore likely to have at least a minor positive contribution to this objective. The option does not however	+1	The option should however be read in the context of other policies which support	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
wellbeing	proactively aim to meet the variety of indices in this option. The impact on the provision of open space, limiting air, noise and light pollution and promoting safe and secure environments is unknown.		community health and wellbeing.	
I) Delivering the necessary infrastructure	A housing target set at a level slightly lower than the required level to meet the objectively assessed need of Mid Devon is capable of being met without negatively impacting on the delivery of necessary infrastructure. Transport evidence confirms a new junction onto the M5 at Cullompton is technically feasible and that infrastructure requirements can be met. This policy approach could have some positive or some negative impacts on delivering the necessary infrastructure. The level of impact will be on a site by site basis.	0	The policy should read in the context of other policies which aim to deliver the necessary infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan.	0

Secondary/cumulative/synergistic effects:	A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC. As such a policy option which has less development proposed is considered reach the similar conclusions.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet a significant proportion of the housing needs across the district.

Alternative Option S2: Amount of residential development - Intermediate Higher Growth Scenario (8,000 dwellings).

The development needs of the community will be met through the provision of approximately 8,000 dwellings between 1 April 2013 and 31 March 2033. This is a higher level of growth than is needed during the plan period and therefore would provide an additional 400 dwellings above the objectively assessed need.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	An intermediate higher growth scenario is likely to be more difficult to distribute between the towns while avoiding environmental impacts. The towns of Tiverton and Crediton are both reaching their landscape limits as they are contained in natural topographical bowls. Current development is at or just below these thresholds and significant future development may exceed capacity under this scenario. The intermediate higher growth would not necessarily result in the need to the strategic development to the east of Tiverton but would require greater development in the 3 main towns and/or villages, as such a slight negative effect is considered.	-1	The policy should however be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved.	0
B) Protection and promotion of a quality built and historic environment	A intermediate higher growth scenario will have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality design which supports the positive contribution of new development to local character.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
C) Mitigating the effects of climate change	The construction of new homes and catering for a greater population can increase carbon emissions; however there may be opportunities by meeting housing needs to enhance features such as walking and cycling provision for the community as a whole. Opportunities to reduce flood risk; promote low carbon or renewable energy and create low carbon buildings also arise. Similar to the existing policy this option may have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies such as sustainable design.	0
D) Safeguarding and minimising resource use	A intermediate higher growth scenario is likely to be more difficult to distribute between the towns while safeguarding and minimising resource use. Option is likely to put greater pressure on the supply of brownfield sites and therefore require further greenfield developments. Similarly there are areas of the highest grades of agricultural land around the towns of Tiverton and Cullompton. The level of impact on this objective will be dependent on individual proposals. Given the additional land required to provide for the additional housing a negative effect is considered.	-2	This policy should be read in the context of other policies in the plan, for example sustainable design. A negative effect is anticipated post mitigation.	-2
E) Promoting economic growth and employment	An increase in residential development would benefit the local economy and increase the number of local people to the working pool. A slight positive impact.	+1		+1
F) Supporting	This policy will have a positive contribution towards achieving this	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
retail	objective as an increase in population would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres.			
G) Meeting housing needs	This policy will have a significant positive contribution towards achieving this objective. The key purpose of this policy is to meet the housing needs of the district. The policy meets the housing needs target of 7,600 and exceeds it by setting a target of 8,000 dwellings. The impact of this policy on existing services and facilities is unknown as this will be on a site by site basis. This approach is considered to have a significant positive impact on housing provision in the District.	+3	This option should be read in the context of other policies in the plan which aim to meet the demand for services and facilities of the community.	+3
H) Ensuring community health and wellbeing	The policy helps to reduce barriers to housing by meeting the diverse housing needs of the district and is therefore likely to have at least a minor positive contribution to this objective. The option does not however proactively aim to meet the variety of indices in this option. The impact on the provision of open space, limiting air, noise and light pollution and promoting safe and secure environments is unknown.	+1	The option should however be read in the context of other policies which support community health and wellbeing.	+1
I) Delivering the necessary infrastructure	An intermediate growth scenario is likely to be more difficult to distribute between the towns while delivering the necessary infrastructure. This policy approach could have some positive or some negative impacts on delivering the necessary infrastructure. The level of impact on this objective will be dependent on individual	-1	The policy should read in the context of other policies which aim to deliver the necessary infrastructure. Any proposals will also have to abide to the	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	proposals but is considered to be a slight negative in this scenario.		infrastructure policy in the plan. A slight negative effect is anticipated post mitigation due to the difficulty of distributing development across the towns and villages whilst providing the necessary infrastructure in-step.	

Secondary/cumulative/synergistic effects:	There could be a cumulative impact of a higher growth scenario on delivering the necessary infrastructure. The impact of this policy option will be dependent on the scale and location of individual proposals. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC. Given this option would be greater than that proposed in the preferred option an updated Habitat Regulations Assessment would be required to determine the cumulative impact on the integrity of European sites around Mid Devon.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Alternative Option S2: Amount of residential development - Higher Growth Scenario (8,400 dwellings).

The development needs of the community will be met through the provision of approximately 8,400 dwellings between 1 April 2013 and 31 March 2033.This is a higher level of growth than is needed during the plan period and therefore would provide an additional 800 dwellings above the objectively assessed need.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	A higher growth scenario may be more difficult to distribute between the towns while avoiding environmental impacts. The towns of Tiverton and Crediton are both reaching their landscape limits as they are contained in natural topographical bowls. Current development is at or just below these thresholds and significant future development may exceed capacity under this scenario. In the case of Tiverton, only one strategic direction is available to the east and this option has some landscape impact. The level of impact on this objective will be dependent on individual proposals but is considered to be negative in this scenario.	-2	The policy should however be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved. A slight negative effect is still anticipated post mitigation given the higher growth scenario for this plan period.	-1
B) Protection and promotion of a quality built and historic	A higher growth scenario will have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality	0

	impacts on delivering the necessary infrastructure. The level of impact on this objective will be dependent on individual proposals but is considered to be significantly negative in this scenario given that the additional development is of an equivalent scale to a strategic allocation which is likely to require significant additional infrastructure above that already committed in the Local Plan.		infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan. A negative and uncertain effect is anticipated post mitigation given the potential for significant infrastructure required however the impact is uncertain as it would be dependent on the location of development and the nature of the infrastructure required. Given the level of development proposed a number of proposals in rural areas are likely to be required where they may be a number of smaller roads which may require upgrading. However the level of development in any one location may not be of the quantum to result in sufficient funding to enable	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			full mitigation as such a negative but uncertain impact is considered.	

Secondary/cumulative/synergistic effects:	There could be a cumulative impact of a higher growth scenario on delivering the necessary infrastructure. The impact of this policy option will be dependent on the scale and location of individual proposals. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC. Given this option would be greater than that proposed in the preferred option an updated Habitat Regulations Assessment would be required to determine the cumulative impact on the integrity of European sites around Mid Devon.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Alternative Option S2: Amount of residential development - Elevated Higher Growth Scenario (8,800 dwellings).

The development needs of the community will be met through the provision of approximately 8,800 dwellings between 1 April 2013 and 31 March 2033.This is a higher level of growth than is needed during the plan period and therefore would provide an additional 1200 dwellings above the objectively assessed need.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	A higher growth scenario is likely to be more difficult to distribute between the towns while avoiding environmental impacts. The towns of Tiverton and Crediton are both reaching their landscape limits as they are contained in natural topographical bowls. Current development is at or just below these thresholds and significant future development may exceed capacity under this scenario. In the case of Tiverton, only one strategic direction is available to the east and this option has some landscape impact. The level of impact on this objective will be dependent on individual proposals but is considered to be significantly negative in this scenario as it would result in additional development of an equivalent scale to a strategic allocation.	-3	The policy should however be considered in the context of other policies which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved. A negative effect is still anticipated post mitigation given the higher growth scenario for this plan period.	-2
B) Protection and promotion of a quality built and historic environment	A higher growth scenario will have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality design which supports the	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			positive contribution of new development to local character.	
C) Mitigating the effects of climate change	The construction of new homes and catering for a greater population can increase carbon emissions; however there may be opportunities by meeting housing needs to enhance features such as walking and cycling provision for the community as a whole. Opportunities to reduce flood risk; promote low carbon or renewable energy and create low carbon buildings also arise. Similar to the existing policy this option may have some positive and some negative impacts in contributing to this objective depending on each individual proposal.	0	The policy should be considered in the context of other policies such as sustainable design.	0
D) Safeguarding and minimising resource use	A higher growth scenario is likely to be more difficult to distribute between the towns while safeguarding and minimising resource use. Option is likely to put greater pressure on the supply of brownfield sites and therefore require further greenfield developments. Similarly there are areas of the highest grades of agricultural land around the towns of Tiverton and Cullompton. The level of impact on this objective will be dependent on individual proposals. Given the additional land required to provide for the additional housing a significant negative effect is considered.	-3	This policy should be read in the context of other policies in the plan, for example sustainable design. A significant negative effect is anticipated post mitigation.	-3
E) Promoting economic	An increase in residential development would benefit the local economy and increase the number of local people to the working	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
growth and employment	pool. A slight positive impact.			
F) Supporting retail	This policy will have a positive contribution towards achieving this objective as an increase in population would increase the number of shoppers in the District and contribute towards enhancing shopping areas in Town Centres.	+1		+1
G) Meeting housing needs	This policy will have a significant positive contribution towards achieving this objective. The key purpose of this policy is to meet the housing needs of the district. The policy meets the housing needs target of 7,600 and exceeds it by setting a target of 8,800 dwellings. The impact of this policy on existing services and facilities is unknown as this will be on a site by site basis. This approach is considered to have a positive impact on housing provision in the District.	+3	This option should be read in the context of other policies in the plan which aim to meet the demand for services and facilities of the community.	+3
H) Ensuring community health and wellbeing	The policy helps to reduce barriers to housing by meeting the diverse housing needs of the district and is therefore likely to have at least a minor positive contribution to this objective. The option does not however proactively aim to meet the variety of indices in this option. The impact on the provision of open space, limiting air, noise and light pollution and promoting safe and secure environments is unknown.	+1	The option should however be read in the context of other policies which support community health and wellbeing.	+1
I) Delivering the necessary	A higher growth scenario is likely to be more difficult to distribute between the towns while delivering the necessary infrastructure.	-3	The policy should read in the context of other policies which	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
infrastructure	This policy approach could have some positive or some negative impacts on delivering the necessary infrastructure. The level of impact on this objective will be dependent on individual proposals but is considered to be significantly negative in this scenario given that the additional development is of an equivalent scale to a strategic allocation which is likely to require significant additional infrastructure above that already committed in the Local Plan.		aim to deliver the necessary infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan. A negative and uncertain effect is anticipated post mitigation given the potential for significant infrastructure required however the impact is uncertain as it would be dependent on the location of development and the nature of the infrastructure required. Given the level of development proposed a number of proposals in rural areas are likely to be required where they may be a number of smaller roads which may require upgrading. However the level of development in any one location may not be of the quantum to result in	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			sufficient funding to enable full mitigation as such a negative but uncertain impact is considered.	

Secondary/cumulative/synergistic effects:	There could be a cumulative impact of a higher growth scenario on delivering the necessary infrastructure. The impact of this policy option will be dependent on the scale and location of individual proposals. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC. Given this option would be greater than that proposed in the preferred option an updated Habitat Regulations Assessment would be required to determine the cumulative impact on the integrity of European sites around Mid Devon.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Alternative Option S2: Distribution of development - Rural focussed.

Option concentrates greater development in rural areas with some development in the three main towns. Development in rural areas would be allocated in settlements designated as villages under S13 of the Local Plan Review. The spread of development would be 30% in Tiverton, 21% at Cullompton, 10% in Crediton and the remaining 39% in rural areas. This alternative was raised by a representation at the proposed submission stage, as such it has be assessed as part of the SA as an alternative option.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The strategy concentrates development in rural areas with some continued provision in the three main towns. The strategy is likely to impact the landscape and rural setting of villages with the level of development proposed. There may be opportunities for enhancement of landscape character and biodiversity, but this is likely to be on an individual site basis and would be recognised at the post-mitigation stage. As the level of development proposed could result in development disproportionate to the scale of a village in a rural setting and would as such lead to significant landscape impacts a significant negative effect is considered.	-3	The protection of the natural environment is justified in policies elsewhere in the plan and there may be some opportunities for enhancement of landscape character and biodiversity on an individual site basis. However as the development would be of a scale which the impact on the rural setting and landscape would not be avoidable in a number of cases a negative effect is considered.	-2
B) Protection and promotion of a quality	New development in towns and villages has the potential to have a negative impact on the historic environment located in and around these settlements. There may however be some opportunities for a	-3	The protection of the historic environment is justified in policies elsewhere in the plan	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
built and historic environment	positive effect through enhancement of heritage assets and local distinctiveness, but this is likely to be on an individual site basis and will be assessed at the post-mitigation stage. In terms of the impact on villages there is likely to be a significant negative impact in which although some development proposed could be easily absorbed into a rural setting bringing benefits to a village, the level of development proposed is at a scale which would be disproportionate to the size of the villages identified in policy S13.		and some mitigation can be provided on a case-by-case basis in which heritage assets and local distinctiveness will be enhanced. However due to the scale of development over the lifetime of the plan is at a level disproportionate to the size of the villages identified in policy S13 a negative effect remains.	
C) Mitigating the effects of climate change	By focussing new build development in rural areas, this will increase the need to travel and therefore increase greenhouse gas emissions. There may be some opportunities for flood mitigation and promotion of low carbon and renewable energy measures, but this is likely to be on an individual site basis, for example through design and will be considered at the post-mitigation stage. As some development will still occur in the towns but a significant proportion will be delivered in villages a negative effect overall is considered.	-2	There would overall be a slight negative effect considered post mitigation given that there may be opportunities for some flood mitigation and promotion of low carbon and renewable energy measures however this remains uncertain as this will be dependent on individual applications. As a large proportion of development	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			would be in villages but coupled with the fact that some development will remain in the towns and the potential for opportunities for climate change mitigation the impact is reduced and a slight negative effect is considered.	
D) Safeguarding and minimising resource use	The option scores negatively towards safeguarding and minimising resource use as it focuses new development in villages in which would likely result in the loss of greenfield development and loss of some of the best and most versatile agricultural land. The agricultural land classification of all available village allocations ranges from grade 1 to brownfield land. The majority of sites fall in the bracket of grade 3 agricultural land and therefore overall a negative effect is considered.	-2	Policy should be read in conjunction with other policies within the plan and Devon County Council Waste Plan including those that set out the waste hierarchy.	-2
E) Promoting economic growth and employment	This option will have a positive effect as it increases jobs and reduces out commuting by focusing commercial floorspace at existing main towns and settlements. The option also supports rural business by providing commercial floor space in villages. This option will help meet the employment needs of the district and enhance the economy in general while encouraging inward investment and future prosperity. The main towns have good connection to the	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	strategic road network for storage and distribution uses.			
F) Supporting retail	Focusing development in the main towns and larger villages will support the vitality and viability of existing town centres and shopping facilities in the larger villages. Retail provision could be provided but this is not outlined as a policy requirement. A slight positive effect is considered.	+1		+1
G) Meeting housing needs	The strategic option will meet the anticipated housing needs target for the district, a significant positive effect. Housing is concentrated at the villages where there are some services and facilities with the rest of the proposed development to be provided at the main towns where existing services and facilities are located.	+3		+3
H) Ensuring community health and wellbeing	The level of development proposed in rural areas may be disproportionate to the level of development a village can absorb. Although allocations would only be proposed in villages which meet the essential criteria set out in S13 as such a negative rather than significant negative effect is considered. Some development would also still occur in the main towns and villages which would allow for access to community facilities, open space and recreation. The option would focus development away from Crediton and Cullompton which are designated air quality management areas which would result in some positive impact. The option however would lead to greater light and noise pollution, particularly in villages where the scale of the development is greater than what	-3	Provision of community facilities, open space and recreation and air quality mitigation is justified in policies elsewhere in the plan and provide some mitigation for the lack of mention of community service and facilities. An overall negative effect remains as the rural distribution implied by the suggested alternative infers	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	might be easily absorbed by the existing scale of the village. The policy does not mention the provision of open space, sport or recreation or the reduction of crime. Overall a significant negative effect given the disproportionate level of development at villages which may impact on local services and facilities and without the quantum of development in one location to provide a full range of new services and facilities.		that there would not be the quantum of development in any one location to provide a full range of new services and facilities.	
I) Delivering the necessary infrastructure	Option does not contribute towards the efficient use of existing infrastructure as it focusses growth in villages which although can support some growth the level of development proposed is disproportionate to the existing size of the villages which are often connected to the road network by B or C roads. There are potential road capacity issues which would require improvements across Mid Devon as development would be spread across the villages rather than being focussed in key locations. As development would be spread across Mid Devon, there is likely to be a need in more than one primary education facility for improvements. Given pressures on education and road infrastructure a significant effect is anticipated.	-3	The provision of infrastructure is justified in policies elsewhere in the plan. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities. Given the volume of areas that would require upgrading, mitigation in some cases may be limited as such a negative effect remains. This is uncertain given the number of proposals in rural areas although the sites are viewed	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			as deliverable the cumulative effect would depend on the site proposals and location in the district.	

Secondary/cumulative/synergistic effects:	A number of mitigation measures are suggested which are covered by other policies in the plan. The Local Plan Review should be read as a whole and would mitigate the sustainability issues which cross-reference across the plan. There may be a greater cumulative impact on the road network as there would not be the quantum of development in one location to enable the improvement of a single junction or access such as the options for a strategic allocations would allow, therefore at a number of points across the district there may be a greater level of traffic but limited funds for improvements.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option meets the housing and commercial needs for the district. Distribution is dispersed with 39% proposed in rural areas.

Alternative Option S2: Distribution of development - Tiverton and Crediton Focussed.

Option concentrates development at Tiverton with maximum provision at Crediton based on the availability of sites. As such the breakdown of distribution is as follows: 48% Tiverton, 21% Cullompton, 15% Crediton, 16% Rural Areas. This distribution is based on a proposed alternative from a representation at the Proposed Submission stage requesting a higher development figure at Crediton whilst removing East Cullompton urban expansion. By removing the East Cullompton allocation 2100 dwellings would need to be redistributed. Using the highest capacity

figures for all the available sites in Crediton a maximum figure of 1047 has been derived with the rest of the development distributed to Tiverton and Rural Areas. As such this option would result in a Tiverton and Crediton focussed option with greater development in rural areas. For the purposes of the SA, development using this distribution would assume major development at Hartnoll Farm as the only suitable, available and achievable option in Tiverton and the allocation of all potential Crediton sites to the maximum capacity.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The strategy continues to concentrate development at the districts main towns of Tiverton, Cullompton and Crediton. The policy acknowledges that development will be to a scale and mix appropriate to their individual infrastructures, economies, character and constraints. Development opportunities at Tiverton and Crediton are constrained by topography and the potential for landscape impact. This strategy accepts that a Tiverton and Crediton focussed approach would only be achievable with strategic growth at Hartnoll Farm as Tiverton's only suitable, available and achievable site. The Hartnoll Farm site is bordered by the Grand Western Canal Conservation Area to the south and east of the site. The canal is also a County Wildlife Site and Local Nature Reserve. Development of the site would have a potential significant visual impact and would impact on the biodiversity and habitats of the area. This strategy option accords with the aspirations of the NPPF to prevent isolated new homes and to protect and enhance valued landscapes. There may also be opportunities for enhancement of landscape character and biodiversity, but this is likely to be on an	-3	The protection of the natural environment is justified in policies elsewhere in the plan. At Hartnoll Farm the policy requires environmental protection and enhancement which will help mitigate any negative impact on this objective by the development of this site. Land adjacent the Grand Western Canal will need to be protected as Green Infrastructure. Because some slight negative effects will remain with regard to Hartnoll Farm post mitigation in combination with the location of some of the Crediton sites	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	individual site basis. Given the potential landscape and environmental impact at Hartnoll Farm in particular as well as other larger sites on the edge of the main towns an overall negative impact is considered. It would also result in the development of all potential sites available for allocation in Crediton to the maximum capacity. Given the topographical constraints some of the sites are in prominent locations in the town which would result in a negative impact. Together with the consideration of a negative effect of developing Hartnoll Farm a significant negative effect overall is considered.		are prominent and therefore landscape impacts will not be completely mitigated, overall a negative effect remains.	
B) Protection and promotion of a quality built and historic environment	New development in towns and villages has the potential to have a negative impact on the historic environment located in and around these settlements. In Crediton there are a number of listed buildings that may be affected. Some sites also fall within the Conservation Area or an area of archaeological potential. There may however be some opportunities for a positive effect through enhancement of heritage assets and local distinctiveness, but this is likely to be on an individual site basis. At Hartnoll Farm, the site lies in an area of archaeological potential with the HER recording prehistoric activity here and recent archaeological work has identified prehistoric activity across the wider landscape. A small part of the border is next to residential development and there are farm buildings within the site. The level of development proposed	-3/?	The protection of the historic environment is justified in policies elsewhere in the plan. At Hartnoll Farm, the proposal requires a public Masterplanning exercise to be undertaken before any planning application is made and which will improve the quality of the final design of the development. Archaeological investigation and appropriate mitigation to	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	will be significant and therefore would likely impact the built and historic environment. However as there are no protected built or historic assets in or around the site the impact on this objective will be minor. In combination with the Tiverton Eastern Urban Extension (which is already allocated) development at Hartnoll Farm would represent a significant lengthening of Tiverton in an easterly direction along the valley floor. Two issues emerge; firstly as development extends ever easterly, the distance from town centre services increases as well as reliance on the private car and secondly the town will significantly close the gap between its urban areas with nearby villages such as Halberton, which currently has its own separate identity. The coalescence of Halberton is considered a negative effect that cannot be mitigated. Coupled with the potential impact on the historic environment including listed buildings a significant negative effect is considered although this aspect remains uncertain as the exact effect will depend on each individual proposal.		enhance sustainability. Coalescence of Tiverton with Halberton cannot be mitigated satisfactorily, a remaining negative effect after mitigation is considered. This remains uncertain given the archaeological impact is unknown before investigation.	
C) Mitigating the effects of climate change	By focusing new build development in the settlements where jobs and services are located the option will reduce the need to travel. However this option does also allocate greater development in rural areas and therefore will increased the need the travel in these locations. There is the potential for the provision of low carbon and renewable energy as part of larger development in and around the	-1/?	The protection against flood risk, surface water run-off and provision of renewable energy policy is justified in policies elsewhere in the plan. The unknown impact of the	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	main towns. However Crediton is an Air Quality Management Area (AQMA) and although the Crediton Link Road has alleviated some traffic, maximising the capacity of development at Crediton may have a negative impact on the AQMA. Where some settlements are vulnerable to flood risk, new development would be subject to safeguards in policies, with levels of development dependent on the capacity of the settlement and available suitable land. There may be some opportunities for flood mitigation and promotion of low carbon and renewable energy measures, but this is likely to be on an individual site basis, for example through design. At Hartnoll Farm the entire site is in a low risk area (flood zone 1) being the area of least flood risk. There is an unnamed watercourse which has an unknown impact on flood risk. Evidence in the SFRA suggests that the site may have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Transport provision to ensure appropriate accessibility for all modes is also supported by the policy and traffic through Halberton and Sampford Peverell is discouraged. There are no existing services, infrastructure or facilities within the site or in close proximity. Given the scale of the development at this site it is likely some negative impacts will occur with regard to carbon emissions through construction and increased traffic movement overall a slight negative effect is considered.		unnamed watercourse in the site remains. At Hartnoll Farm the policy should be read in the context of other policies in the plan which aim to mitigate the effects of climate change and reduce the risk of flooding.	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
D) Safeguarding and minimising resource use	There could be some loss of the best and most versatile agricultural land around some settlements and contribution to waste levels, a negative effect. New development will add to waste water levels however the option considers environmental capacity. At Hartnoll Farm, the majority of the site 68.7ha (71%) to the NE of the site is Grade 1 agricultural land. It is likely that this site will have a negative impact on this objective due to the scale of development of a site that is predominantly Grade 1 agricultural greenfield land which would be lost if this site is developed. The site will therefore have a significant negative impact on this objective.	-3	Policy should be read in conjunction with other policies within the plan and Devon County Council Waste Plan including those that set out the waste hierarchy.	-3
E) Promoting economic growth and employment	This option will have a positive effect on this objective as it increases jobs at existing main towns and settlements. The option also supports rural business by providing commercial floor space in villages. This option will help meet the employment needs of the district and enhance the economy in general while encouraging inward investment and future prosperity. The main towns have good connection to the strategic road network for storage and distribution uses. At Hartnoll Farm there are existing employment units on this site which could be retained. The policy option does not propose employment development on this site. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive	+2		+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	impact.			
F) Supporting retail	Focusing development in the Tiverton, Crediton and larger villages will support the vitality and viability of existing town centres and shopping facilities in the larger villages. Although the option suggests retail provision could be provided this is not outlined as a policy requirement. At Hartnoll Farm, no retail is proposed however the high street would benefit from the custom of the residents from this development. There would be a positive effect.	+2		+2
G) Meeting housing needs	This option takes forward the Core Strategy development strategy by directing development to the existing main towns of Mid Devon until 2033. The strategic option will meet the anticipated housing needs target for the district, a significant positive effect. Housing is concentrated Tiverton and Crediton where existing services and facilities are located. The policy option allows for a scale and mix of development to help contribute to balanced communities. Overall a significant positive impact on meeting housing needs for the district.	+3		+3
H) Ensuring community health and wellbeing	Focusing development at the main towns and villages will result in the majority of new development having access to community facilities, open space and recreation available within existing settlements, a positive effect. Option focuses development towards Crediton which is a designated air quality management areas and would therefore would have a negative effect. There may be some	0	Provision of community facilities, open space and recreation and air quality mitigation is justified in policies elsewhere in the plan. At Hartnoll Farm, the option	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	opportunities for mitigation measures, on a town wide basis. For example through new road layout / relief road and /or walking and cycling. Development is primarily focused away from Exmoor National Park an international dark sky reserve, a positive effect. Walking, cycling and public transport are encouraged through proximity of development to town centres and other key services, a slight positive effect as this option would result in greater development in rural areas. The mix of development will contribute to reducing social exclusion. Policy option supports limited development which meets local needs and promotes vibrant rural communities. Option will contribute towards light and noise pollution, a slight negative effect. The policy does not mention the provision of open space, sport or recreation or the reduction of crime, a slight negative impact. Overall a neutral impact.		promotes the delivery of community facilities to meet local needs arising and transport provision to ensure appropriate accessibility for all modes. An overall slight positive effect.	
l) Delivering the necessary infrastructure	Option contributes towards the efficient use of existing infrastructure by focusing growth in the main towns, reducing the need to travel. At Hartnoll Farm, the policy requires an agreed phasing strategy to bring forward development and infrastructure in step and retain the overall viability of development. There are potential highway capacity issues around this site which would require enhancements before this site is developed. Initial work from the Tiverton Eastern Urban Extension suggest that one of the only viable solutions to transport concerns regarding further	-3	The provision of infrastructure is justified in policies elsewhere in the plan. At Hartnoll Farm, the policy for this site requires a public Masterplanning exercise to be undertaken before any planning application is made. The site is therefore likely to	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	development to the East of Tiverton is a link road through the Blundells School site. The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. Places are mostly needed at the Tiverton EUE, which is the largest area of development by far. The masterplan for the area and forthcoming developments include the provision of a school site that can accommodate up to 420 pupils, which should be sufficient to meet the demand in Tiverton. Additional secondary places will be required to accommodate the development proposed to be allocated in the emerging Local Plan Review. Developer contributions will be required in order to fund these improvements. In Crediton both local schools need to expand and need to be supported by developer contributions/CIL. It should be noted that both schools are on constrained sites which are expensive to expand and may require additional land and buildings to expand across all year groups. Given the educational pressures in both Tiverton and Crediton and need for additional infrastructure an overall significant effect is considered.		deliver the necessary infrastructure for the site with the potential to also benefit the surrounding community. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities.	

Secondary/cumulative/synergistic effects:	A number of mitigation measures are suggested which are covered by other policies in the plan.

	The Local Plan Review should be read as a whole and would mitigate the sustainability issues which cross-reference across the plan. In Crediton the maximisation of all available allocation sites could have a negative cumulative impact on the air quality of the area, given that Crediton is an air quality management area with limited additional opportunity for strategic transport infrastructure. There are also negative cumulative landscape impact given the topography of Crediton leading to sites being developed in prominent locations. In combination with the existing Tiverton Eastern Urban Extension allocation, the Hartnoll Farm site would necessitate a relief road behind Blundells School.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option meets the housing and commercial needs for the district. Development would be focussed at Tiverton and Crediton with greater distribution in rural areas. Policy option enables the distribution of development across the district to meet local needs.

Preferred Option S2: Higher Growth Scenario Commercial including J27 option

The development needs of the community will be met through the provision of approximately 215,000 square metres of commercial floorspace between 1 April 2013 and 31 March 2033.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	In taking into account the impacts noted in the appraisal of the Junction 27 proposal there are some important trees to the north of the site and in close proximity to a number of TPOs. The site falls within the 'Lowland plains' landscape character area and is typified	-3/?	The Junction 27 policy requires environmental protection and enhancement including noise mitigation. Furthermore Policy	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	as being an open, low lying flat landscape which is agriculturally prosperous. Development of this scale would have a significant impact on existing landscape character, altering the rural quality of the entrance into Mid Devon from the M5 and the rural character around Willand and Sampford Peverell. Landscape sensitivity is higher, primarily because of the lack of a relationship with an existing settlement, and the change to landscape character that would arise as a result. There are views available into the site from the west, as far as the canal in Sampford Peverell, whereas some parts feel isolated, with reduced visibility – though some parts are visible from the motorway. There are differences in character/visibility between the north and south, the north being more open and plainly visible, the south less so. The landscape appraisal for this site noted that employment development would potentially be more damaging from residential development owing to the larger scale buildings and infrastructure needed. A Phase I habitat survey for the northern commercial element of the site (Devon Biodiversity Records Centre, June 2014) was undertaken. The site includes a variety of habitat types including Biodiversity Action Plan habitats. The mature trees and hedgerows within the site were also identified as important for biodiversity. Natural England expressed the potential for the proposed leisure and retail development at J27 to impact on the Culm Grasslands		S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment. The policy requires mitigation measures for the Culm Grasslands SAC where appropriate and the allocation will be subject to comprehensive masterplanning. Given the scale of development some landscape and biodiversity impact is likely to remain however mitigation provided helps to minimise the impact. The area considered is less than that appraised in the Proposed Submission SA and the proposal now considers mitigation if there is an impact	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	SAC due to traffic impacting the air quality. Further information regarding traffic assessments and any consequential air quality assessment on the effects on this SAC will have to be undertaken to rule out any effect. Given the scale of development, impact on the landscape, biodiversity and potential impact on the Culm Grasslands SAC, overall a significant negative impact is considered although this remains uncertain.		on the Culm Grasslands, as such overall a slight negative effect is considered.	
B) Protection and promotion of a quality built and historic environment	In taking into account the impacts noted in the appraisal of the Junction 27 proposal there are listed buildings close to the site and there may be some impact the immediate settings of these buildings. To some degree there will be an impact on the registered park and garden at Bridwell which is set on rising land to the east. To a limited degree the landscape settings of Sampford Peverell conservation area and the Grand Western Canal conservation area will also be affected. There is some uncertainty in the exact impact of the allocation given this will be dependent on site layouts, density, scale and design of buildings. This site occupies a substantial area within a landscape that has evidence of prehistoric and Roman activity, overall a negative and uncertain effect.	-2/?	The policy should be considered in the context of other policies which aim to protect heritage assets and which promote high quality design which supports the positive contribution of new development to local character including the J27 allocation proposal. A neutral effect is considered, this remains uncertain given the masterplan for the J27 option is not yet adopted.	0/?
C) Mitigating the effects of	In taking into account the impacts noted in the appraisal of the Junction 27 proposal it is recognised that the site contains a number	-3/?	The protection against flood risk, surface water run-off and	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
climate change	of small streams but is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. The site could also contribute to surface water run off without appropriate mitigation measures. Given the scale of development carbon emissions could be high. Overall a significant negative effect and uncertain effect is considered given the potential but unknown impact of the small streams, the potential contribution to surface water run off and increased carbon emissions.		provision of renewable energy policy is justified in policies elsewhere in the plan including the J27 allocation option. Carbon emissions will be mitigated where possible, but the increase in traffic will still result in a slight negative impact. Uncertainty remains due to the unknown element of the small streams.	
D) Safeguarding and minimising resource use	In comparison to the previously assessed higher growth scenario which identified this as a significant negative effect concluding that a large number of sites would be required to meet the amount of commercial floorspace proposed, this alternative looks at one site which has the benefit of spin-off trade and linked trips. In taking into account the impacts noted in the appraisal of the Junction 27 proposal it is recognised that part of the Junction 27 site borders the Mineral Consultation Area for Hillhead Quarry. Since the Proposed Submission Sustainability Appraisal, given the smaller site area and updated Devon County Council Minerals Plan (proposed for adoption) it is considered the development of the site will not constrain future working of the remaining permitted reserves within	-2		-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Hillhead Quarry. The site is located on mainly greenfield land with a small portion on brownfield land. The majority of the site is Grade 3 good / moderate quality land with a small section of the site to the west of the M5 grade 4 poor quality land. Given the scale of the development, on Grade 3 agricultural land a negative effect is considered.			
E) Promoting economic growth and employment	This policy will have a significant positive contribution towards achieving this objective. Development in this location and at this scale has the potential to bring major inward investment and job creation for Mid Devon and the wider region.	+3		+3
F) Supporting retail	In taking into account the impacts noted in the appraisal of the Junction 27 proposal the option will deliver a 6ha designer outlet shopping centre, which will include up to 14,000 square metres of controlled comparison goods and up to 2,000 square metres of A3 uses. Since the Proposed Submission Sustainability Appraisal of the Junction 27 option a number of town centre uses have been withdrawn from the earlier promoted schemes and a retail impact assessment has been used to determine the impact. This included an assessment of 14 towns and city centres including those outside of Mid Devon District and concluded that all centres would continue to achieve higher future trading turnovers than at the assessment year. The study also sets out how designer outlet villages differ from that in town centres and how they can be controlled by planning.	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Given the changes proposed to the Junction 27 policy and the findings of the retail impact assessment, the proposal significantly enhances the retail offer of the district a significant positive impact is considered.			
G) Meeting housing needs	The Local Plan will provide for the additional housing required in response to the employment opportunity provided by this allocation. A neutral effect is considered.	0		0
H) Ensuring community health and wellbeing	In taking into account the impacts noted in the appraisal of the Junction 27 proposal the option will provide some benefit to existing and future communities in which it provides leisure and retail opportunities. In taking into account the policy as a whole the option enhances existing policy as it broadens the potential use classes which will be promoted by the policy including development for healthcare, education and public facilities, overall a positive effect.	+2		+2
I) Delivering the necessary infrastructure	In taking into account the impacts noted in the appraisal of the Junction 27 proposal, there is potential for this to have a negative effect if not planned appropriately although this remains uncertain.	-2/?	In taking into account the mitigation recommended in the Junction 27 proposal the policy seeks the provision of supporting access roads, parking, infrastructure and landscaping of 43ha. It requires transport	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			improvements to ensure appropriate accessibility for all modes, including new or improved access and egress onto the M5 motorway and pedestrian and cycling links across the motorway to Tiverton Parkway Railway Station. Furthermore comprehensive masterplanning is required by policy will provide greater detail on delivering the necessary infrastructure. The policy also requires environmental protection and enhancement with the supporting text referencing the provision of green infrastructure. Overall a positive effect is considered, the uncertainty remains as the detail of providing the	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			necessary infrastructure will be considered at the masterplanning and planning application stage.	

Secondary/cumulative/synergistic effects:	A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option aims to meet the housing needs across the district.

Additional Appraisals for S3 Meeting housing need

Preferred Option S3: Gypsy sites distribution of development – Town focussed urban extensions

This alternative distributes the gypsy pitches across the district by allocating gypsy and traveller pitches within strategic and large allocations to meet the predicted need.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural	This strategy concentrates development at the districts main towns of Tiverton, Cullompton and Crediton. Given that the allocation of	0	The protection of the natural environment is justified in	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment	gypsy pitches are proposed in areas already identified as suitable for other forms of development, the additional impact on the natural environment by allocating gypsy and traveller pitches would be a neutral impact.		policies elsewhere in the plan which aim to protect the natural environment and ensure that the most valued landscapes and designated biodiversity and geodiversity sites are conserved.	
B) Protection and promotion of a quality built and historic environment	The allocation of gypsy and traveller pitches in strategic or large allocations enables the pitches to be appropriately designed and planned with a suitable relationship with other forms of development. Being in the main towns and as part of strategic or large sites enables the number of pitches or plots to be well-related to the size and location of the site and the surrounding population's size and density. Given the good relationship with the built environment a slight positive impact is considered.	+1	The protection of the historic environment is justified in policies elsewhere in the plan which aim to protect heritage assets and which promote high quality design.	+1
C) Mitigating the effects of climate change	The provision in the main towns ensures that travellers are able to access education, health, welfare and employment infrastructure minimising travel to access these services and facilities. Overall a neutral effect.	0	The protection against flood risk, surface water run-off is justified in policies elsewhere in the plan.	0
D) Safeguarding and minimising resource use	The strategic and large sites identified in the Local Plan Review have a range of agricultural land classifications with some sites on grades 1 and 2. However by allocating such sites within strategic and large sites already identified for development, it minimises the need to	-1		-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	develop on additional land therefore overall a slight negative effect is considered.			
E) Promoting economic growth and employment	No effect.	0		0
F) Supporting retail	No effect.	0		0
G) Meeting housing needs	The policy notes that a five year supply of gypsy an traveller pitches will be allocated on deliverable sites within Mid Devon to ensure that the predicted need for traveller sites will be met. This scenario identifies the sites within the main towns as part of the strategic and large allocations. Overall a significant positive effect.	+3		+3
H) Ensuring community health and wellbeing	The provision in the main towns ensures that travellers are able to access education, health, welfare and employment infrastructure. The allocation of gypsy and traveller pitches in strategic or large allocations enables the pitches to be appropriately designed and planned with a suitable relationship with other forms of development reducing tensions between the settled and traveller communities. Overall a positive impact.	+2		+2
I) Delivering the necessary infrastructure	The provision in the main towns ensures that existing infrastructure is able to provide for the travelling community including schools, health services, roads and transportation. Any additional	0	The policy should be read in the context of other policies which aim to deliver	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	infrastructure required can be planned and designed as part of the total site. Overall a neutral effect is considered.		infrastructure. Any proposals will also have to abide to the infrastructure policy in the plan.	

Secondary/cumulative/synergistic effects:	A number of mitigation measures are suggested which are covered by other policies in the plan. The Local Plan Review should be read as a whole and would mitigate the sustainability issues which cross-reference across the plan.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option meets the gypsy and traveller needs of the district which are providing on strategic or large site at the main towns.

Alternative Option S3: Gypsy sites distribution of development – Rural focussed new sites

This strategy would focus the distribution of gypsy and traveller pitches across Mid Devon in defined villages.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The strategy concentrates gypsy and traveller pitches across rural areas in defined villages. The strategy is likely to have some landscape impact given that the sites would likely occur on the edge of villages in where there would be a slight negative effect.	-2/?	The protection of the natural environment is justified in policies elsewhere in the plan and there may be some	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	There is the risk of some gypsy and traveller sites to be disproportionate to the scale of a village in a rural setting which would lead to a further negative effect although this is uncertain as this would depend on specific site allocations. Overall a negative although uncertain effect is considered given that the exact impact will depend on specific site allocations.		opportunities for enhancement of landscape character and biodiversity on an individual site basis. Therefore overall a slight negative although uncertain effect is considered given that some impact may be mitigated but this is uncertain as it'll depend on specific site allocations.	
B) Protection and promotion of a quality built and historic environment	The allocation of gypsy and traveller pitches across rural areas means there is less scope for the site to be designed and planned as you could in a strategic or large allocation. There is also the risk that although allocated sites in rural areas should generally be smaller in scale in comparison to strategic and large sites within the district they could be of a scale large enough to be disproportionate to small settled communities. Overall a negative effect although uncertain as the exact impact will be dependent on specific site allocations.	-2/?	The protection of the historic environment is justified in policies elsewhere in the plan and some mitigation can be provided on a case-by-case basis in which heritage assets and local distinctiveness will be enhancement. Therefore overall a slight negative although uncertain effect is considered as the exact impact will dependent on specific site	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			allocations.	
C) Mitigating the effects of climate change	By focussing new build development in rural areas, this will increase the need to travel and therefore increase greenhouse gas emissions. Overall a negative effect is considered.	-2	The protection against flood risk, surface water run-off is justified in policies elsewhere in the plan.	-2
D) Safeguarding and minimising resource use	The option scores negatively towards safeguarding and minimising resource use as it focuses new development in villages in which would likely result in the loss of greenfield development and loss of some of the best and most versatile agricultural land. Overall a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No effect	0		0
F) Supporting retail	No effect	0		0
G) Meeting housing needs	The policy notes that a five year supply of gypsy and traveller pitches will be allocated on deliverable sites within Mid Devon to ensure that the predicted need for traveller sites will be met. This scenario will lead to sites being identified in rural areas to meet this need. Overall a significant positive effect.	+3		+3
H) Ensuring community	The provision in rural areas means that travellers are less able to access education, health, welfare and employment infrastructure	-2	Provision of community facilities, open space and	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	than if allocated in towns. Although there are opportunities within villages for this provision which on balance would lead to only a slight negative effect. Without being part of strategic or large allocations, there is less opportunity for pitches to be appropriately designed and planned with a suitable relationship with other forms of development. In considering these issues overall a negative effect is considered although uncertain given that this will rely on the design and site specific allocation.		recreation and air quality mitigation is justified in policies elsewhere in the plan and provide some mitigation. An overall slight negative effect remains as there is not the quantum of development in one location to provide a full range of new services and facilities.	
I) Delivering the necessary infrastructure	The provision in rural areas means that such sites may put additional pressure on existing infrastructure and may require the provision of additional infrastructure separate to other forms of development making such provision more resource intensive in comparison to the provision on strategic or large allocations. Overall a slight negative effect is considered.	-1	The provision of infrastructure is justified in policies elsewhere in the plan. Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities.	0

Secondary/cumulative/synergistic effects:	A number of mitigation measures are suggested which are covered by other policies in the plan. The Local Plan Review should be read as a whole and would mitigate the sustainability issues which cross-reference across the plan.

Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Construction will occur over the lifetime of the Plan up to 2033. Once completed the effect will be permanent.
Spatial extent: (District wide / local)	Policy option meets the gypsy and traveller needs of the district which are providing on strategic or large site at the main towns.

Additional Appraisals for S13 Villages

Alternative Option S13: Edge of Village development

Policy identifies a list of 22 rural settlements designated as villages and suitable for small scale housing, employment, tourism and leisure, services and facilities and limited development that enhances community vitality or meets local social or economic need. The policy deviates from Core Strategy through the identification of Bampton as a rural village. The definition of "rural village" within the supporting text has also been simplified to require settlements to only require three key services for inclusion; an education facility, convenience store and transport service. Based on the amended criteria, Holcombe Rogus is identified as an additional settlement. Burlescombe (including Westleigh) did not meet the essential criteria. Yeoford does not meet the essential criteria of the policy as it does not have a shop however it has been included as an exception because of its strong transport links, a bus and daily train service. This alternative proposes edge-of-village development where housing delivery across the district falls below defined 'action levels' or the Council is unable to demonstrate a five year housing supply.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	Development would be limited to minor proposals within the defined settlement limits, unless housing delivery falls below defined 'action levels' or the Council is unable to demonstrate a five year housing supply in which development would be allowed on	+1	The policy should be read in the context of other policies in the plan.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	edge of village. This policy in general protects the countryside. Hemyock (an identified village) is located in the Blackdown Hills Area of Outstanding Natural Beauty (AONB). The impact does not result in a significant positive impact as in some cases edge of village development may occur which may have a greater impact than the proposed policy which ensures development is within settlement limits, overall a slight positive effect.			
B) Protection and promotion of a quality built and historic environment	The policy makes no reference to the built or historic environment. A large number of the villages have conservation areas. A slight negative effect is considered as edge of village development where housing delivery falls below defined 'action levels' or the Council is unable to demonstrate a five year housing supply could result in a cumulative negative impact on the built environment given that development would expand existing villages beyond their identified settlement limits.	-1		-1
C) Mitigating the effects of climate change	The policy makes no reference to climate change mitigation or flood risk. The option directs some limited growth to villages with the most services therefore reducing the need to travel, a minor positive effect. A slight negative effect is considered as edge of village development could lead to increase the need to travel as development could be greater than existing services can sustain. Overall a neutral effect is considered.	0		0
D)	The policy makes no reference to safeguarding or minimising	0/?		0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
Safeguarding and minimising resource use	resources. It is uncertain the level of development that could occur through edge of village development and what impact this would have on this objective. Therefore an uncertain effect is considered.			
E) Promoting economic growth and employment	Criteria within the policy allow for employment, tourism and leisure development within rural settlements and development that enhances community vitality and social and economic needs, a significant positive effect towards economic growth and employment in the district.	+3		+3
F) Supporting retail	Criteria within the policy allow for services and facilities within rural settlements and development that enhances community vitality and social and economic needs, a significant positive effect towards supporting the self-sufficiency of rural shopping.	+3		+3
G) Meeting housing needs	National planning policy advocates the provision of market housing in rural areas where it would facilitate the delivery of significant affordable housing required to meet housing need. To facilitate the provision of affordable housing in villages across Mid Devon, the supporting text of the policy clarifies that some market housing may be permitted. Rural exception sites will also be considered in line with development management policies and an existing Supplementary Planning Document on Meeting Housing Needs. In appropriate circumstances, self-build housing will be permitted through the exceptions policy. Edge of village development is also	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	promoted where housing delivery falls below defined 'action levels' or the Council is unable to demonstrate a five year housing supply. The policy is supportive of small scale housing, a significant positive effect.			
H) Ensuring community health and wellbeing	The policy criteria allow for service and facilities serving the locality and other limited development which enhances community vitality or meets a local social or economic need. The policy contributes towards maintaining and enhancing community facilities, provision of open space and the district's cultural sport and recreation opportunities. This wording directly accords with the SA objective to ensure community health and well-being, a significant positive effect. The supporting text lists transport services as one of the key criteria for defining rural settlements and therefore the list of 22 settlements will be locations most accessible by public transport. Edge of village development beyond the settlement limits of the villages defined could lead to development greater than existing services can sustain, a negative effect. On-balance the policy is considered to have a slight positive effect.	+1	The policy should also be read in the context of other policies in the plan.	+1
I) Delivering the necessary infrastructure	The supporting text clarifies that rural settlements should include an education facility, convenience store and transport service to be listed as a sustainable location for development. Burlescombe (including Westleigh) did not meet the essential criteria and are not proposed to be carried forward. Yeoford does not meet the	+1	The policy should be read in the context of other policies in the plan.	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	essential criteria of the policy as it does not have a shop however it has been included for its strong transport links with provision of a bus and daily train service, a positive effect. The policy directs development to sustainable locations helping to reduce the overall need to travel, reducing traffic congestion and increasing access to key services, a significant positive effect. As the criteria do not list access to health or social care, this option could be directing development away from the most sustainable locations in respect of health, a negative effect. A slight negative effect is also felt due to the potential for edge of village development which would be beyond the settlement limits of the villages and therefore could put greater pressure on existing infrastructure. On-balance the policy option is considered to have a slight positive effect.			

Secondary/cumulative/synergistic effects:	The policy should work alongside Policy S3 Meeting Housing Need which sets out an exception test for affordable housing and self-build. The provision of edge of village development where housing delivery falls below defined 'action levels' or the Council is unable to demonstrate a five year housing supply could lead to greater cumulative impacts given that these would be beyond settlement limits and therefore would be less contained.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Development will occur throughout the lifetime of the plan up to 2033 and the effect should be considered permanent.
Spatial extent: (District wide / local)	Policy is restricted to land within defined settlement limits of villages unless housing delivery falls

	below defined ‘action levels’ or the Council is unable to demonstrate a five year housing supply in which edge of settlement development is enabled.

Site Allocations

Additional Appraisals for Tiverton allocations

Preferred Option TIV16: Blundells School: 14ha 200 dwellings

A site of 14 hectares north of Blundells School is proposed for 200 dwellings (28% affordable), 8 hectares of informal green infrastructure, land shaping to raise areas for development above flood zone 3, provision of a junction of Heathcoat Way and a safeguarded road route through the site to serve as a future second strategic road access for development at Tiverton eastern urban extension, provision and enhancement of cycle and pedestrian links in the area, site contamination assessment and remediation, provision of sustainable urban drainage and implementation of transport plans.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is located within the settlement of Tiverton. There is minimal impact on landscape character and development could improve the current site which comprises of a number of elements including a scrap yard and former poultry handling factory.	+2		+2
B) Protection and promotion of a quality built and historic environment	The site lies in an area of archaeological potential with regard to known prehistoric activity in the wider landscape. The southern boundary of the site is adjacent the Blundell's Conservation Area and development would need to have consideration of the conservation area with regard to design. In taking these elements into account the impact pre-mitigation could be negative although this is uncertain given the impact on the area of	-1/?	The policy provides for design which respects and enhances the character and appearance of the Conservation Area. It also provides for archaeological investigation and appropriate mitigation. In	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	archaeological potential is unknown. The regeneration and sustainability benefits arising from redeveloping this site overall will have a slight positive effect, on balance taking into account the potential impact on archaeology, conservation area but the benefit of regeneration overall a slight negative effect is considered. This is uncertain given the impact on archaeological potential is unknown.		taking into account these mitigation measures and the benefit of the regeneration of this site a slight positive effect is considered overall, although this remains uncertain as the results of the archaeological investigation remain unknown.	
C) Mitigating the effects of climate change	The majority of the site is in flood zone 3 (62%). With the remainder of the site in FZ1 and FZ2. Evidence in the SFRA suggests that the site may have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Development could lead to increased surface run-off a negative effect. Given the majority of the site lies within flood zone 3 and the risk of increased surface water run-off a significant negative impact is considered pre-mitigation.	-3	The policy requires land shaping to raise areas for development above flood zone 3, including an allowance for climate change, and to create additional floodplain to compensate for the loss of floodplain; mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance and implementation of transport	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			plans and other non-traditional transport measures to minimise carbon footprint and air quality impacts. Furthermore the Environment Agency is supportive of this allocation given the opportunity it provides to assist in the provision of wider flood risk mitigation proposals in the area. Given the mitigation to offset the pre-mitigation impacts and the benefit of the wider flood risk mitigation a positive impact is considered.	
D) Safeguarding and minimising resource use	0.7ha is contaminated land (food processing). This site is comprised of brownfield and grade 4 greenfield land. The development of this site would result in both a positive and negative impact but on balance an overall negative score reflecting contaminated land.	-2	The policy requires a site contamination assessment and remediation to mitigate risks associated with the former and current land uses. Taking this into account and regeneration of the site of	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			which part of the site will re-use brownfield land a positive impact is considered.	
E) Promoting economic growth and employment	The development of this site would result in the loss of vacant industrial land a negative effect. The proposed allocation does not provide for additional employment land however the large scale residential development will have some positive impact including boosting local construction firms and associated trades who would benefit from being able to undertake contract work on the site. Overall, on balance a slight negative effect is considered.	-1		-1
F) Supporting retail	This site would add to housing in a town, close to the town centre. There is potential for this site to support retail in Tiverton overall a positive effect.	+2		+2
G) Meeting housing needs	The site allocation will provide for 200 dwellings which will include 28% affordable housing. The site therefore will have a significant positive impact on meeting housing needs for the district.	+3		+3
H) Ensuring community health and wellbeing	The option may contribute towards light and noise pollution however the site is also close to the town centre of Tiverton and therefore is likely to be within walking distance to services. The development of this site is therefore likely to have a slight positive impact on this objective.	+1	The site option requires the provision and enhancement of cycle and pedestrian links in the area a positive impact. The option policy requires the	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			remediation of contaminated land which will remove pollutants. It also requires the implementation of transport plans and other transport measures to minimise carbon footprint and air quality impacts. Overall a positive impact is considered.	
l) Delivering the necessary infrastructure	The policy requires land shaping to raise areas for development above flood zone 3 and the provision of a junction on Heathcoat Way and safeguarded route through the site to serve as a future second strategic road access for development at Tiverton eastern urban extension. The option is likely to deliver the necessary infrastructure for the site. The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. It is anticipated that this development will not as an individual site put pressure on the local secondary schools however additional secondary places will be required to	-1	The site is likely to deliver the necessary infrastructure for the site and a safeguarded route to serve future communities. The policy option requires the provision and enhancement of cycle and pedestrian links in the area. It also requires implementation of transport plans and other transport measures to minimise carbon footprint and air quality impacts. Policy S8 also provides mitigation by	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	accommodate the development proposed to be allocated in the emerging local Plan Review. Developer contributions will be required in order to fund these improvements. Overall a slight negative impact is considered.		setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a slight positive effect is considered.	

Secondary/cumulative/synergistic effects:	The development overall will help meet the housing needs of Tiverton including affordable housing. It will also assist in the provision of wider flood risk mitigation proposals in the area. The policy also requires a safeguarded route through the site to serve as a future second strategic road access for development at Tiverton eastern urban extension. Furthermore there is the benefit of remediating contaminated land in this area.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The proposal will provide long term benefits for the wider area including flood risk mitigation, remediation of contaminated land and provides a safeguarded route through the site to serve as a future second strategic road access for development at Tiverton eastern urban extension. Once developed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Tiverton including for affordable housing. Development would be focussed in Tiverton, the largest town in the district.

Alternative Option TIV13 Tidcombe Hall (contingency site): 8.4ha 200 dwellings

This alternative re-considers the allocation as set out in the options consultation taking into account the information set out in the Historic Environment Appraisal (HEA), updated methodology in the SA with regard to site allocation appraisals and reasons for the reduction in total dwellings based on SHLAA panel recommendations.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site contains mature hedgerows and trees and the canal is also a defined County Wildlife Site & Local Nature Reserve. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. There is a potential, but localised impact on character as the site is reasonably well contained within the landscape. There would be some impact arising from development, though this would be against the backdrop of the existing built environment to the west, a negative effect. Given the proposed density of the site, it is considered there would be some impact on the canal in which the HEA opposes development coming further forwards towards the canal. Overall, there is potential for a significant negative effect with the density proposed.	-3	The policy option requires the protection of the setting of the Grand Western Canal, Tidcombe Hall and Conservation Areas which provides some mitigation, a negative effect overall.	-2
B) Protection and promotion of a quality built and historic	The site is located on the south eastern edge of Tiverton and is close to the Grand Western Canal Conservation Area with 1.6ha of the site is within the Grand Western Canal Conservation Area (19% northern part). This site includes the site of the medieval	-2/?	Mitigation through policy to protect the setting of the canal, Tidcombe Hall and Conservation Area may be	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment	chapel of St Lawrence and Tidcombe Hall. The site lies just to the west of Tidcombe Farmhouse which contains Tidcombe Hall, a 19th century house that was formerly a rectory. There is also a record of a domestic chapel at this site that was licensed in the early 15th century. A desk-based assessment followed by appropriate archaeological mitigation would be required.		limited given the density of development proposed. The HEA notes that design is important to mitigate the impact of development particularly to the south and east of the hall where impact could be significant but will depend on design, landscaping etc. Archaeological mitigation in the form of a programme of archaeological work undertaken through the application of a standard worded archaeological condition on any consent granted may also be required. The scale of the development proposed may limit the level of mitigation available to protect the built and historic environment, as such a	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			negative although uncertain effect remains.	
C) Mitigating the effects of climate change	The site is located in Flood zone 1 the lowest level of flood risk. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Development on the site may increase surface water run-off. A negative effect. There is also an unnamed watercourse flowing through the site for which there is no flooding data available, overall a negative and uncertain effect.	-3/?	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. Policy criteria, seeks walking and cycling enhancements and connection to surrounding public rights of way and green infrastructure. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. If mitigation measures are incorporated a neutral effect is considered.	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			Uncertainty remains as the impact of the unnamed watercourse is not yet known.	
D) Safeguarding and minimising resource use	The site is made up of a variation of land which has a number of different grades, including urban land and grade 1 agricultural land. Development option is located partly on greenfield land which would be lost if this site is developed. As approximately 75% of the site is made up of Grade 1 and Grade 2 agricultural land, development of this site will have a negative impact on this objective.	-3		-3
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact.	+1		+1
F) Supporting retail	The policy contains no retail proposals, however the high street would benefit from the custom of the residents from this development. There would be a positive effect.	+2		+2
G) Meeting housing needs	Option provides for 200 new dwellings a contribution towards future housing need and includes provision for affordable housing, a significant positive effect.	+3		+3
H) Ensuring community	There are shops along Canal Hill which are easily accessible, but the site is not within walking distance of Tiverton town centre, a	-1	Policy criteria, seeks walking and cycling enhancements and	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	slight negative effect. There are bus stops located on Tidcombe Lane and a footpath on the opposite site of Tidcombe Lane leading to Canal Hill.		connection to surrounding public rights of way and green infrastructure.	
I) Delivering the necessary infrastructure	A key factor is access. Tidcombe Lane has limited width without footways and Tidcombe Bridge is similar. Improvements to Tidcombe Lane will be necessary northwards from the site to ensure the safety of pedestrians, although will not necessarily increase its traffic capacity. A single vehicular access point on to Canal Hill will need to be supplemented with a secondary emergency access designed to be located at the end of the main cul-de-sac within the site. The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. Additional secondary places will be required to accommodate the development proposed to be allocated in the emerging Local Plan Review. Developer contributions will be required in order to fund these improvements. Given school capacity and site access issues given the scale of development proposed a significant negative effect is considered.	-3	Criteria within the policy seek a vehicular access points from Canal Hill and improvements to Tidcombe Lane northwards from the site. However given the scale of development proposed and access limitations, it is considered a negative effect remains.	-2

Secondary/cumulative/synergistic effects:	The development overall will help meet the housing needs of Tiverton including affordable housing. Given the level of development proposed it is anticipated there will be a likely negative cumulative impact on the road network.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. There it potential for long term issues with access to the site due to the level of development proposed.
Spatial extent: (District wide / local)	This site option will help provide housing within Tiverton including for affordable housing. Development would be focussed in Tiverton, the largest town in the district.

Alternative Option TIV14 Wynnards Mead: New information, impact with existing mitigation

A site of 6.3 hectares at Wynnards Mead, Bakers Hill is allocated for residential development, subject to; 70 dwellings (28% affordable), design that minimises impact to landscape character and setting of the adjoining listed building and unlisted building (Wynnards Mead), upgrading the lane to provide vehicular access point with the existing access to Wynnards Mead to form a secondary access for pedestrian and cyclists and site contamination assessment with mitigation for the historic quarry. New information has been provided by the Historic Environment Assessment (HEA) and a representation by the Environment Agency (EA) which assesses the harm to the historic environment and flood risk.

Sustainability objective	**Commentary**	**Impact**	**Mitigation**	**Post Mitigation**
A) Protection of the natural environment	This site falls within the 'River valley slopes and combes' landscape character area. This area typically falls within the River Exe valley and often has steep, wooded sides and a strong sense of enclosure within a lush valley landscape. The site is elevated, and therefore is visible from a number of viewpoints, including Seven Crosses Road to the south. Accordingly, there would be	-2	The site capacity was reduced to 70 dwellings down from 100 dwellings to reflect site constraints originally identified. The policy requires design which minimises impact	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	some impact from development in this location, a negative effect.		to the landscape character, overall a minor negative impact with this mitigation measure.	
B) Protection and promotion of a quality built and historic environment	The site, which lies to the west of Tiverton, consists of the grounds of a large house called 'Wynnards Mead', including some associated agricultural land and two cottages. Gotham adjoins the site to the west. The site is in close proximity to a listed building to the immediate west of the site. In response to a request made by Historic England a Historic Environment Assessment (HEA) was undertaken which has indicated that the policy as proposed would have a very damaging impact on the settings of Gotham (recently upgraded listed building to II*) and Wynnards Mead (heritage asset). Given the concerns and clarity provided in the HEA a significant negative impact is considered.	-3	Criteria within the policy requires design which protects the character and setting of the adjoining listed buildings and the unlisted house within the site 'Wynnards Mead'. However the HEA suggests significant buffers are required to reduce the impact on the relevant buildings. The mitigation suggested in the policy with the quantum of development proposed would not be capable of providing the mitigation suggested in the HEA, therefore a significant negative effect remains.	-3
C) Mitigating the effects of climate	The site is set on the north side of the Cottey Brook, sloping down north to south. The largest portion of the site in the north is	-2	A policy requirement in the Local Plan Review seeks	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
change	located in flood zone 1, the lowest risk of flooding. The southern edge of the site is within flood zone 3 where the Cottey Brook runs along the southern boundary. Development could lead to increased surface water run-off, a negative effect.		mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance which provides some mitigation. However a negative effect remains given that new information from the EA suggests a 7m wide buffer around Cottey Brook is required to allow for future maintenance of the watercourse which isn't currently mitigated in the policy.	
D) Safeguarding and minimising resource use	2.1ha (33% S and W) of the site is located on Grade 3 very good quality agricultural land, 4.2ha (67% NE) of the site is located on unclassified agricultural grade and a small area of contaminated land (historic quarry, 0.06ha in north). On balance development of this site would result a minor negative impact on this objective.	-1/?	Criteria in policy require site contamination assessment and remediation to mitigate risks associated with the historic quarry to the north of the site. A negative effect remains due to the partially known	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			agricultural grade of land.	
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land. A neutral effect.	0		0
F) Supporting retail	The policy contains no retail proposals, however the high street would benefit from the custom of the residents from this development. There would be a minor positive effect.	+1		+1
G) Meeting housing needs	Option provides for 70 new dwellings a contribution towards future housing need including affordable housing, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	The services and facilities of Tiverton lie some 1.2 km distant. The site is located within walking distance to Tiverton town centre and is close to a bus service into Tiverton.	+1		+1
I) Delivering the necessary infrastructure	An adequate site access is achievable however the existing carriageway and footway links to Tiverton are very steep. The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. Additional secondary places will be required to accommodate the development proposed to be allocated in the emerging Local Plan	-2	Policy proposes the upgrading of the lane to 'Wynnard's Cottages' to provide the vehicular access point with widening of the frontage. The existing access to the house Wynnard's Mead to form a secondary access for pedestrians and cyclists. Policy	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Review. Developer contributions will be required in order to fund these improvements. Given school capacity and site access issues a negative effect is considered.		S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	The development overall will meet the housing needs of Tiverton including affordable housing.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. Once developed, development will be permanent. The development without appropriate mitigation will lead to a permanent damaging impact on the settings of Gotham (recently upgraded listed building to II*) and Wynnards Mead (heritage asset).
Spatial extent: (District wide / local)	This site option will help provide housing within Tiverton including for affordable housing. Development would be focussed in Tiverton, the largest town in the district. The provision of 70 dwellings will help meet the housing needs of the district as a whole.

Alternative Option TIV14 Wynnards Mead: New information, reduced area

In response to a request made by Historic England a Historic Environment Assessment (HEA) was undertaken which suggested an alternative option of not allocating the south west and south of the site to protect the setting of the grade II* listed building (Gotham) and heritage asset

(Wynnards Mead). Taking this into account along with a representation from the Environment Agency a site of 1.2 hectares at Wynnards Mead, Bakers Hill could be allocated for residential development, subject to; 29 dwellings (28% affordable), design that minimises impact to landscape character and setting of the adjoining listed building and unlisted building (Wynnards Mead), upgrading the lane to provide vehicular access point and site contamination assessment with mitigation for the historic quarry.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	This site falls within the 'River valley slopes and combes' landscape character area. This area typically falls within the River Exe valley and often has steep, wooded sides and a strong sense of enclosure within a lush valley landscape. The site is elevated, and therefore is visible from a number of viewpoints, including Seven Crosses Road to the south. Accordingly, there would be some impact from development in this location, a negative effect.	-2	The site capacity has been reduced to 29 dwellings down from 70 dwellings to reflect site constraints. The policy requires design which minimises impact to the landscape character, overall a minor negative impact with this mitigation measure.	-1
B) Protection and promotion of a quality built and historic environment	The site, which lies to the west of Tiverton, consists of the grounds of a large house called 'Wynnards Mead', including some associated agricultural land and two cottages. Gotham adjoins the site to the west. The site is in close proximity to a listed building to the immediate west of the site. In response to a request made by Historic England a Historic Environment Assessment (HEA) was undertaken which suggested an alternative option of not allocating the south west and south of the site to protect the setting of the grade II* listed building	-1	Criteria within the policy requires design which protects the character and setting of the adjoining listed buildings and the unlisted house within the site 'Wynnards Mead'.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	(Gotham) and heritage asset (Wynnards Mead). In considering the proposed alternative for the site it is considered that a slight negative impact would remain.			
C) Mitigating the effects of climate change	With the new information provided by the EA that a buffer of at least 7m around Cottey Brook is required to allow for future maintenance of the watercourse, the proposed alternative for the site no longer abuts the north side of Cottey Brook and therefore no longer falls within flood zone 3. However development could lead to increased surface water run-off, a slight negative effect remains.	-1	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. On balance it is felt that development of this site would have a neutral effect.	0
D) Safeguarding and minimising resource use	The proposed alternative site is located on unclassified agricultural grade and a small area of contaminated land (historic quarry, 0.06ha in north). On balance development of this site would result a minor negative impact on this objective.	-1/?	Criteria in policy require site contamination assessment and remediation to mitigate risks associated with the historic quarry to the north of the site. Due to the partially known agricultural grade of land an unknown and slight negative impact would be considered.	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land, a neutral effect.	0		0
F) Supporting retail	The policy contains no retail proposals, however the high street would benefit from the custom of the residents from this development. There would be a minor positive effect.	+1		+1
G) Meeting housing needs	Option provides for 29 new dwellings a contribution towards future housing need including affordable housing, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	The services and facilities of Tiverton lie some 1.2 km distant. The site is located within walking distance to Tiverton town centre and is close to a bus service into Tiverton.	+1		+1
I) Delivering the necessary infrastructure	An adequate site access is achievable however the existing carriageway and footway links to Tiverton are very steep. The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. Additional secondary places will be required to accommodate the development proposed to be allocated in the emerging Local Plan Review. Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	these improvements. Given school capacity and site access issues a negative effect is considered.			

Secondary/cumulative/synergistic effects:	The development overall will meet the housing needs of Tiverton including affordable housing.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. Once developed, development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing within Tiverton including for affordable housing. Development would be focussed in Tiverton, the largest town in the district. The provision of 29 dwellings will help meet the housing needs of the district as a whole.

Alternative Option New Site Tiverton- Seven Crosses Hill

Land with a gross site area of 7.69ha at Seven Crosses hill, Tiverton for 184 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies adjacent to the designated town of Tiverton (under existing planning policy), outside but adjoining the settlement limit. The majority of this site falls within the 'River valley slopes and combes' landscape character area which typically falls within the River Exe Valley and often has steep, wooded sides and a	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation and therefore a slight negative	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	strong sense of enclosure within a lush valley landscape. The southern part of the site falls within the 'Upper farmed and wooded valley slopes' landscape character area which is typified as having a steeply rolling landform, being a lush and fertile land which gives rise to extensive tracts of medium scale fields of permanent pasture. The site is very open from the northern direction whereby the surrounding skylines consist of expansive views of Tiverton and the surrounding countryside. There are no European wildlife sites or SSSIs in close proximity but the site does contain an area of woodland approximately 0.56ha in size which is a priority habitat. As development would be very prominent within the landscape, a negative effect is considered.		effect is considered. Further mitigation would be provided if development was focused on the northern part of the site only. This section would not have such a significant impact on landscape character and would have a better relationship to the existing settlement limit.	
B) Protection and promotion of a quality built and historic environment	There are no listed buildings located in close proximity. This proposed development site occupies a prominent position in the landscape where prehistoric activity is recorded in the County Historic Environment Record on similar topographic sites. An overall slight negative and uncertain effect is considered.	-1/?	Local Plan Review policy DM25 would provide some mitigation by requiring that any planning application include sufficient information to enable a description of a heritage asset affected and a consideration of the impact of development upon it. Based on information from Devon County Council this may take the form of 1) an	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			archaeological geophysical survey and 2) a programme of intrusive archaeological investigation of areas that would be affected by development here. Overall a neutral effect although this remains uncertain as the impact depends on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk however there is an ordinary watercourse on the eastern site boundary. Surface water run-off would increase without appropriate mitigation measures. Overall a slight negative and uncertain effect.	-1/?	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A Flood Risk Assessment would be required to determine the impact of the ordinary watercourse. If development avoided areas of flood risk this would mitigate	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			any impact. Overall a neutral and uncertain effect given as the effect of the ordinary watercourse is not yet known.	
D) Safeguarding and minimising resource use	Development is located on a greenfield site which is grade 3 good / moderate agricultural land, a slight negative effect.	-1		-1
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be a slight positive impact.	+1		+1
F) Supporting retail	This option proposes a large scale residential development within a town. The policy contains no retail proposals, however the high street would benefit from the custom of residents from this development. There would be a positive effect.	+2		+2
G) Meeting housing needs	Option provides for 184 new dwellings contributing towards future housing needs, a significant positive effect.	+3		+3
H) Ensuring community health and	Tiverton is a designated town under policy S10; it has numerous services as outlined in S10 and is considered appropriate for development. Services/facilities in the town centre are within	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
wellbeing	walking distance. Overall a slight positive effect.			
I) Delivering the necessary infrastructure	The Mid Devon Community Infrastructure Evidence Report indicates that there are six primary schools located within Tiverton itself and these are largely accepting more students than their planned admission number. The development allocations will result in a need to provide additional primary education facilities. Additional secondary places will be required to accommodate the development proposed to be allocated in the emerging Local Plan Review. Developer contributions will be required to fund these improvements. Access is a concern as the delivery of an appropriate estate road would be difficult given the challenging topography of the site. The site would require a number of accesses from Seven Crosses Road all of which would necessitate significant excavation. Given the constraints to site access and educational capacity an overall negative effect is considered.	-2	Policy S8 would provide some mitigation by setting out that developers would be expected to contribute to, or bear the full cost of new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity for the primary schools to expand within their current sites. Although access is achievable, work would require significant excavation and would constrain the delivery of the expected yield. Overall a slight negative and uncertain effect is considered given the access constraints and the uncertainty around the limited capacity of the school to expand.	-1/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site have the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site could lead to overcapacity issues in local schools.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic along Seven Crosses Road, Tiverton. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Additional Appraisals for Cullompton allocations

Alternative Option CU1-6: North West Cullompton including Growen Farm full allocation

A site of 106 hectares to the North West of Cullompton is allocated for mixed use development subject to; 1520 dwellings (28% affordable), 5 pitches for gypsies and travellers, extra care housing, 5% of housing to be serviced plots for self-build, 21,000 sqm of commercial floor space including retirement complex, hotel and leisure, 28 hectares of green infrastructure, road linking Tiverton Road to Willand Road, environmental protection, community facilities including primary school, Carbon reduction and air quality improvements, phasing strategy and master planning exercise. Policies CU2-6 provide further detail.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are a number of protected trees and hedgerows within the site, along field boundaries. This site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The landscape is undulating, with the higher parts more sensitive to change and development. Developing this area will extend the built up area of the town, from an agricultural landscape, which will be a significant change. However, the visibility from elsewhere varies across the site. The more elevated parts of the site (such as St Andrews Hill and Rull Hill) are more sensitive to development because of their visibility in the landscape (particularly on north and west facing slopes). The Landscape and Visual Appraisal concludes that development	-3	The policy requires 'environmental protection and enhancement' which will help mitigate the impact on this objective however the level of development on the site will still have an impact on the character of the area. CU3 sets out these measures in detail including; the protection and strengthening of trees and other features, maintaining wildlife networks, 28 ha of green infrastructure, providing	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	of the land will extend Cullompton into the open countryside beyond Rull Hill which currently acts as a strong threshold in the landscape which will largely separate the site from adjacent proposed development. Opportunities for development are limited on the site, and should development proceed, it should be limited to the eastern part of the southern field, adjacent to the proposed development to the east. The northern four fields are not suitable for development. Given some parts of the Growen Farm site are sensitive to change and development, overall a significant negative effect is anticipated.		public open space and allotments, strategic landscaping and measures to protect the biodiversity. However given the findings of the 2014 Landscape and Visual Appraisal on Strategic Site Options report identified the northern four fields are not suitable for development a negative effect remains.	
B) Protection and promotion of a quality built and historic environment	The site adjoins a roman fort on St Andrew's Hill (a scheduled ancient monument). There are a number of listed buildings within the cemetery and farmyards adjoining the site which would need to be considered when designing the development. The site lies in an area of high archaeological potential to the north of the Roman fort at St Andrew's Hill and contains evidence of prehistoric activity identified through aerial photography and findspots of flint tools. Recent archaeological investigations in this area have demonstrated the presence of extensive and significant prehistoric and Romano-British sites.	-2/?	Criteria within the supporting policy CU3 seek mitigation measures through archaeological investigation, a slight negative effect. The policy requires a public Masterplanning exercise to be undertaken before any planning application is made and which will improve the quality of the final design of the development. Overall a	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			slight negative effect.	
C) Mitigating the effects of climate change	The site is largely located in Flood zone 1 the lowest risk to flooding. However there are unnamed watercourses flowing through parts of the site for which flood zone information is not yet known. The northern edge is adjacent to flood zone 3a, which is associated with a watercourse which runs west-east, a potentially slight negative impact. The layout of the development will need to take this into account with a potential buffer zone. Areas of floodplain should be retained as part of the strategic green infrastructure. The Flood Map for Surface Water shows a low risk of flooding from surface water in most areas. Any development must be accompanied by a suitable drainage strategy to deal with existing surface water flows and any potential increase in surface runoff a slight negative impact. The site has increased in size, which has led to more of the northern boundary being adjacent to flood zones 2 and 3. Criteria within the policy seek carbon reduction and air quality improvements, this is required to minimise the overall carbon footprint of the development and ensure the impact of the site on air quality is acceptable, a slight positive effect. One Critical Drainage Area is identified at Cullompton. A Flood Risk Assessment will be required at the planning application stage to determine specific recommendations for mitigation. Taking into account flood risk	-1/?	Criteria within the policy seek mitigation measures through environmental protection and enhancement. Built development is entirely in flood zone 1 and CU3 seeks SUDs to deal with surface water run-off. The policy requires carbon reduction and air quality improvements and will help mitigate the effects of climate change. This will help minimise the overall carbon footprint of the development. A Flood Risk Assessment would be required to determine the impact of the unnamed watercourses. If development avoided areas of flood risk this would mitigate any impact. Policy S11 Cullompton supporting text	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	and climate change an overall minor negative and uncertain effect is considered.		acknowledges the Critical Drainage Area at Cullompton which provides mitigation. Taking into account flood risk and mitigation measures for climate change an overall slight positive effect is considered. Uncertainty remains as the impact of the unnamed watercourse is not yet known.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Approximately 70% of the site is located on Grade 1 agricultural land of the highest quality, with the remainder located on Grade 4, poor quality agricultural land. Grade 1 agricultural land in Mid Devon amounts to 32.4 square kilometres, only 3.5% of the district. Given the loss of the highest grade agricultural land, a significant negative effect is considered.	-3		-3
E) Promoting economic growth and employment	Policy provides 21,000 sqm of commercial floorspace reflecting helping to diversify the economy and encourage inward investment. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. Providing	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	employment sites near where to people live would provide the opportunity to reduce out-commuting, levels of which are high within the district. There would therefore be a significant positive impact.			
F) Supporting retail	The policy contains no specific retail proposals although these proposals could form part of the Commercial allocation. Though the high street and supermarket are not within easy walking distance of all parts of the site, it is still anticipated that they would benefit from the custom of the residents from this development. Therefore a positive impact has been assumed.	+2		+2
G) Meeting housing needs	The option would provide for a significant proportion of the housing needs within the district, overall a significant positive impact.	+3		+3
H) Ensuring community health and wellbeing	The option will have an impact on Cullompton Air Quality Management area which will require some mitigation. The existing site allocation for North West Cullompton includes the provision of a road linking Tiverton Road to Willand Road. This, along with delivery of the Town Centre Relief Road, is intended to significantly reduce the amount of traffic in the town centre. This should in turn improve the air quality and town centre vitality (as it would direct traffic away from the high street) and is at the heart of the long term development strategy for Cullompton. The Renewable Energy, Carbon Reduction and Air Quality study	+2	CU5 makes note of carbon reduction and air quality improvements which will help minimise pollution and benefit community health and wellbeing including use of low emission strategies. CU3 makes provision for areas of equipped and laid out public open space including	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	(2014) reiterates that North West Cullompton alongside East Cullompton are likely to result in the largest change in local air quality as both developments are large in size. Development in Cullompton will increase pollution concentrations as a result of additional traffic using the local road network; however the existing allocation for a Town Centre relief road linking Station Road and Meadow Lane in particularly important for air quality. There is a medical centre located adjacent to the east side of the northern element of the site and a number of rights of way/bridleways run through the site.		children's play, sports pitches and allotments as well as strategic green infrastructure including park land, open space and local nature reserve. The policy also promotes the delivery of community facilities to meet local needs arising and transport provision to ensure appropriate accessibility for all modes. This suggests that opportunities for sustainable forms of travel may arise.	
l) Delivering the necessary infrastructure	The policy requires an agreed phasing strategy to bring forward development and infrastructure in step and retain the overall viability of development. There are potential highway capacity issues around this site which would require enhancements, for example, to M5 J28 before this site is developed. The policy requires masterplanning to take place to ensure that the necessary infrastructure is delivered at a rate to support the additional development without placing unacceptable demands on existing capacity. A road link between Tiverton Road and	+2	CU6 includes an agreed phasing strategy to bring forward development and infrastructure in step and retain the overall viability of development. CU3 includes the provision of Green Infrastructure. CU2 sets out agreed transport provision	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Willand Road will be delivered as part of bringing the site forward, whilst the site will contribute towards the cost of the Town Centre Relief Road, a key element of local infrastructure. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for new primary places in Cullompton. The two schools in the town, St Andrews and Willowbank currently accept more pupils than their planned admission number for the size of school and facilities available there. There are two secondary schools located within this Local Learning Community, including Cullompton Community College which currently has 283 places spare capacity and Uffculme School, which currently admits 113 pupils more than its planned admission number. It will therefore be necessary to expand the secondary schools in the Local Learning community to provide roughly 334 places. Part of the site is close to St. Andrew's Primary School; however the quantum of development will require an additional school to be built to meet identified need. Overall, provision of the necessary infrastructure, is considered a positive impact arising from the policy.		including provision of a network of streets linking to the existing highway network, including a through route suitable for buses linking Tiverton Road to Willand Road; bus enhancements and pedestrian routes. CU4 makes provision for a primary school and contributions towards early years and youth support services. The site is therefore likely to deliver the necessary infrastructure for the site which may also benefit the surrounding community.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site and the other possible options in the plan within Cullompton have the potential to impact upon traffic, put pressure on services and facilities. Development could contribute towards

	traffic in the town with consequential impact on air quality within the town centre. Additional primary school capacity will be needed to accommodate the developments. This would be most suitably provided through a new school at the North-West Cullompton site and a new primary school or schools within the East of Cullompton allocation. Additional secondary school capacity will need to be undertaken in consideration of the aspirations of the local schools and communities.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic increase within the town. The estimated development time of the site is approximately 15 years. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will significantly help provide housing for the district. Development would be focussed as an extension to the second town in the district.

Alternative Option CU7-12: East Cullompton Aller Barton Farm and land south of Honiton Road

A site of 181 hectares to the east of Cullompton is proposed for mixed use development, subject to; 2,100 dwellings during the plan period and 500 dwellings post 2033 including, 28% affordable, extra care housing, 5% to be serviced plots for self-build, at least 10 gypsy and traveller pitches, 20,000 square metres mixed commercial floor space during the plan period and 12,000sqm post 2033, 40ha of green infrastructure comprising mixed open space, sports pitches, allotments and natural habitats, new or improved access and egress onto the M5 motorway and pedestrian and cycle links to the town centre, environmental protection, assessment of land contamination, community facilities, carbon reduction and air quality improvements, phasing strategy and masterplanning.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland Plains' landscape character area which is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is large and predominately flat towards the south west but undulating at the north eastern extent of the site. The landscape of the surrounding area is also largely flat, offering limited views into the site other than towards the south west where there are views out towards the surrounding countryside and agricultural lands. However, given the scale of the site, there may well be variations in topography. The site encompasses part of Allerwood which is lowland mixed deciduous woodland. Much of this wood has been replanted with larch and the ground flora is of particular interest. There is also a rare species designation: Primrose '*Primula vulgaris'* located within the site. Although the site is largely flat offering limited views and fields are of a low wildlife value, the scale of the site is still considered to have a negative effect to wildlife and biodiversity and therefore, a negative effect is considered. This site has not had the benefit of a landscape and visual appraisal as the other strategic site options have, as such an uncertain effect is also considered.	-2/?	The policy requires 'environmental protection and enhancement' which will help mitigate the impact on this objective however the level of development on the site will have an impact on the character of the area. Policy should set out these measures in detail including the protection and strengthening of trees and other features, maintaining wildlife networks, providing public open space and allotments, strategic landscaping and green infrastructure including park land and open space. Overall a slight negative and uncertain effect given that the site has not had the benefit of a landscape and visual appraisal as other strategic site options	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			have.	
B) Protection and promotion of a quality built and historic environment	There are a number of listed buildings located close by but not within the proposed site boundary. These include the Grade II listed Maddock's Farmhouse, the Grade II listed Aller restaurant and the farm buildings arranged around a farmyard 20m south east of Aller restaurant. The site occupies a significant area within a landscape that has evidence of prehistoric and Roman activity recorded in the County Historic Environmental Record. To the west, recent archaeological work has demonstrated the presence of prehistoric and Roman settlement in and around Cullompton. While no such sites are recorded within the area under consideration (though this may just reflect the absence of any formal archaeological work in this area) the Historic Environment Team would regard, due to the area of the proposed allocation and the known prehistoric and Roman activity in the wider landscape, that there is potential for the site to contain archaeological deposits associated with the known prehistoric and Roman activity in the vicinity. The Historic Environment Team would therefore advise the results of an appropriate programme of archaeological work to allow the archaeological potential of the site to be understood along with the impact of any development upon the heritage assets in the site. This would be in accordance with Local and National policy on planning and the	-3/?	Policy should seek detailed archaeological investigation and measures to record and protect archaeological interest. Overall a neutral effect, although this remains uncertain as the effects will depend on the results of the investigation. The policy requires a public masterplanning exercise to be undertaken before any planning application is made to ensure the quality of the final design of the development. The adopted masterplan will help to minimise the impact on the built and historic environment through good design. However given the separation of the site from existing development to	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	historic environment. There is potential for minor negative impacts on heritage until more information is known. Given the potential impact on archaeological potential, a slight negative and uncertain effect is considered. The site option itself is divorced from existing development. The separation of the site from the existing development to the west raises concerns about how well the final design could integrate the existing and proposed development. Furthermore the shape of the proposed site would be an illogical and unusual extension to the built environment. Overall a significant negative effect when combined with the possible impact on archaeological potential, although the archaeological element is uncertain.		the west, and the unusual shape of the development forming an illogical extension to the built environment it is considered that limited mitigation can be provided to ensure the final design is integrated with existing development, therefore overall an overall negative although uncertain effect remains.	
C) Mitigating the effects of climate change	Significant areas to the west of the site are within Flood zones 2 and 3. An array of ordinary watercourses passes through the site, some of which have been culverted. There are significant areas of surface water flooding risk across the site, particularly concentrated around all watercourses. These include concentrated areas of surface water flood risk to the north of Allerwood, extending to the west and along the north-west boundary of the site and high risk regions particularly prevalent to the north-west. There have been two historical fluvial flooding incidents close to the site, just outside of the northerly and southerly boundaries. Reference should be made to Devon	-3/?	Criteria within the policy seek mitigation measures through retention of land in the floodplain as informal amenity open space. The policy requires carbon reduction and air quality improvements and will help mitigate the effects of climate change. Policy S11 Cullompton supporting text acknowledges the Critical	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	County Council's draft SuDS Design Guidance. Surface water from this development will be managed in a way which provides benefits to water quantity, water quality, public amenity and biodiversity. This site will also have an impact on the Cullompton Air Quality Management Area. Given the historical fluvial flooding incidents close to the site and the potential impacts on the Cullompton Air Quality Management Area and the uncertainty associated with the effects of the ordinary watercourses present within the site, a significant negative and uncertain effect is considered.		Drainage Area at Cullompton which provides mitigation. Taking into account flood risk and mitigation measure for climate change an overall neutral effect is considered but this remains uncertain given that the potential effects of the ordinary watercourses remain unknown.	
D) Safeguarding and minimising resource use	Development option is located on grade 3 greenfield land. Given the significant loss of grade 3 agricultural land, a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	There are a number of farms which could be incorporated into the site, or replaced with other employment units as part of a mixed use approach for the whole site. The policy seeks the provision of 20,000 square metres of mixed commercial floor space during the plan period and 12,000 sqm post 2033, bringing with it a large number of jobs into the town. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would be a significant positive impact.	+3		+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
F) Supporting retail	The scale of residential development in this location near to the town centre is considered a slight positive effect for town centre viability. As the percentage of retail within the sites commercial element is uncertain, an unknown is also considered.	+1/?	Criteria in the policy state that this is subject to impact assessment which demonstrates no adverse impacts on existing retail uses within Cullompton Town Centre, an overall slight positive effect. An unknown is recorded until the retail impact has been assessed.	+1/?
G) Meeting housing needs	Option will provide for a significant proportion of new dwellings during the plan period including an affordable housing contribution towards future housing need, a significant positive effect. The mix of dwellings to be achieved on the site will be tailored to achieve the appropriate balance and will provide gypsy and traveller sites, extra care housing and service plots for self-build. Given the site is of such a scale to generate a critical mass of self-sustaining development and the option significantly contributes towards housing development an overall significant positive effect is considered.	+3		+3
H) Ensuring community health and	The site is located some distance from the town centre and remote from Cullompton town services/facilities. Option will contribute towards light and noise pollution, a slight negative	-3	Policy should make note of carbon reduction and air quality improvements which	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
wellbeing	effect. The Renewable Energy, Carbon Reduction and Air Quality Study (2014) reiterates that North West Cullompton alongside East Cullompton are likely to result in the largest change in local air quality as both developments are large in size. Development in Cullompton will increase pollution concentrations as a result of additional traffic using the local road network; however the existing allocation for a Town Centre relief road linking Station Road and Meadow Land is particularly important for air quality. In balancing the distance of the development from the town centre, the lack of services and the corresponding light, noise and air pollution, an overall significant negative effect is considered.		will help minimise pollution and benefit community health and wellbeing. CU9 makes provision for areas of equipped and laid out public open space including children's play, sports pitches and allotments as well as strategic green infrastructure including park land, open space and local nature reserve. Criteria within the policy seek provision of a dedicated pedestrian and cycle route to the town centre. The policy also promotes the delivery of community facilities to meet local needs arising and transport provision to ensure appropriate accessibility for all modes. This suggests that opportunities for sustainable forms of travel may arise.	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			However given the unusual shape of the site and separation from existing development with access to Honiton Road only to the east of the site, the provision of accessible forms to travel may not easily be provided. An overall slight negative and uncertain effect.	
I) Delivering the necessary infrastructure	The policy will require an agreed phasing strategy to bring forward development and infrastructure in step and retain the overall viability of development. There are potential highway capacity issues around this site which would require enhancements, for example, to M5 J28 before this site is developed. A development in this location and of the size proposed would have significant implications for the operation of J28 and the M5 mainline. The junction already operates at capacity at times with queues on the off-slips extending back onto the M5 mainline. Consideration would also have to be given to the ability of the M5 mainline to accommodate the forecast traffic flows and measures identified, if necessary, to ensure that demand for traffic movements along the M5 remains within the	-3	The policy will include a phasing strategy to bring forward development and infrastructure in step and retain the overall viability of development. The policy will include the provision of Green Infrastructure. CU8 sets out agreed transport provision including; Provision of mitigation measures to ensure only acceptable impacts occur to J28 of the M5 as a result of	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	capacity of the mainline to accommodate it. The site is of a sufficient scale for infrastructure improvements to be necessary within and outside of the site. Criteria within the policy will seek transport provision to ensure appropriate accessibility for all modes, improvements to Junction 28 of the M5 motorway and provision of a dedicated pedestrian and cycle route to the town centre. Given the capacity limitations for junction 28 of the M5; traffic implications for the Honiton Road and lead in time for delivery of a large urban extension against proposed mitigation measures a significant negative effect is considered until appropriate studies / modelling work can confirm that access can be achieved and suitable junctions designed. The size of the development would also need considerable planning and design works and criteria within the policy should seek a phasing strategy and public masterplanning exercise. The unusual shape of the proposed site would result in access from the main Honiton Road only available to the East of the site, the furthest area of the site to existing development to the West. The primary schools will have limited spare capacity to support future development and are on constrained sites and not easily expanded. A development of this scale is likely to generate approximately 1200 primary age pupils, requiring the provision of new primary provision within the development site. Potentially,		traffic generated from the site; Provision of appropriate highway improvements on roads around the development to ensure an unacceptable traffic impacts are mitigated; Provision of a network of streets linking to the existing highway network, and appropriate mitigation to reduce impacts on the existing road network such as Honiton Road; Sustainable modes of transport are also supported. The policy should make provision for a primary school and contributions towards secondary school places. The site is therefore likely to deliver the necessary infrastructure for the site which may also benefit the surrounding community.	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	this would require two sites of between 2.ha and 2.9ha each (including nursery provision). The secondary school is at capacity and will need to be expanded to support increased children in an around the area. Overall a significant negative effect.		However this is uncertain given the unusual shape of the site only allowing access from the east of the site which calls into question how well the site will be integrated with existing infrastructure.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon the traffic, put pressure on services and facilities and the current provision of infrastructure should be mitigated by the policy and supplementary policies which are promoted in the supporting text. Development could contribute towards traffic in the town with consequential impact on air quality within the town centre and capacity issues at Junction 28 of the M5 however the policy will require mitigation for these impacts. Overall the development of this site will help meet the housing needs of Cullompton and the district as a whole. Additional primary school capacity will be needed to accommodate the developments. This would be most suitably provided through a new primary school at the North-West Cullompton site and a new primary school or schools providing within the East of Cullompton allocation. Additional secondary school capacity will need to be undertaken in consideration of the aspirations of the local schools and communities. The Renewable Energy, Carbon Reduction and Air Quality study (2014) recognises benefits with locating strategic development within a single location in carbon reduction terms.
Temporary/permanent effects: Timescale: Short	Development will occur during the later period of the plan, and then will continue

(1-5 years), Medium (6-15 years), Long (15+ years)	throughout the remaining lifetime, (therefore likely to only be taking place in the long-term). Once developed, the effects will be permanent.
Spatial extent: (District wide/local)	The policy set seeks to meet the development needs of the whole district.

Alternative Option CU21: Land at Colebrook, larger site 19.3ha 400 dwellings

A site of 19.3 ha is proposed for residential development, subject to; 400 dwellings. The development shall not commence until the Town Centre relief road has been provided, upgrading of Colebrook Lane to accommodate additional traffic and two points of access from Siskins Chase, green infrastructure and retention of the land in the flood plain for open space, environmental measures, archaeological investigation, transport assessment and air quality improvements.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The central band of the site falls within the 'Sparsely settled farmed valley floors' landscape character area. This area is typified by the presence of rivers or streams and related flat or gently sloping valley bottoms within the low lying areas of the district. The north and south portions of the site falls within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is typified by having a gently rolling and strongly undulating landscape which is intensively farmed. The site is reasonably enclosed to Colebrook Lane and is part of a rolling landscape. There is limited wider landscape impact, but a more localised impact if the site is developed. Given the scale of development a negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation. Criteria within the policy seek measures to protect and strengthen environmental features which contribute towards the character and biodiversity of the surrounding countryside and mitigation through the provision of green infrastructure including the	-1

			protection of amenity local space. Given the above mitigation measures, but the potential impacts on landscape, a slight negative effect is considered.	
B) Protection and promotion of a quality built and historic environment	The site occupies a large area in a landscape with evidence of prehistoric and Roman activity in the vicinity. Any planning application for development here will need to be supported by the results of an appropriate level of archaeological works to allow the significance of the heritage asset to be understood along with the impact of the development upon it. An overall slight negative and uncertain effect is considered.	-1/?	Criteria within the policy seek mitigation through archaeological mitigation.	0/?
C) Mitigating the effects of climate change	Kia Ora Farm and fishing lakes to the west of the site. The Cole Brook runs from the east circling the bottom half of the site, and then parallel to boundary (on south east side). Approximately 1.6 ha of the site lies within Flood Zone 2 & 3 and 1 ha of the site lies within the functional floodplain. The remainder of the site (16.7ha) lies within Flood Zone 1. One Critical Drainage Area is identified at Cullompton. A Flood Risk Assessment will be required at the planning application stage to determine specific recommendations for mitigation. However, Cullompton is well served by a local and wider bus service which could help reduce car travel and therefore carbon emissions. Taking into account flood risk but the provision of a regular bus service an overall negative effect is considered.	-2	Criteria within the policy seek mitigation measures through retention of land in the floodplain as informal amenity open space. A policy requirement in the Local Plan Review seeks mitigation through the provision of Sustainable Urban Drainage Systems to deal with surface water run-off and arrangements for future	+1

			maintenance. Policy S11 Cullompton supporting text acknowledges the Critical Drainage Area at Cullompton and provides mitigation. Criteria within the policy seek carbon reduction and air quality improvements, this is required to minimise the overall carbon footprint of the development and ensure the impact of the site on air quality is acceptable, a slight positive effect.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land which would be lost if this site is developed. Policy would result in the loss of 0.2 ha of grade 1 excellent quality agricultural land, 14.8 ha of grade 2 very good quality agricultural land and 4.3ha of good to moderate quality agricultural land. Overall a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	Site does not result in a loss or gain of employment land. Development of this scale may be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact.	+1		+1
F) Supporting	Option is located some distance from the town centre. The policy	+2		+2

retail	contains no retail proposals, however the high street could benefit from the custom of the residents from this development. Given the scale of development within a town, a positive effect is considered.			
G) Meeting housing needs	Option provides for 400 new dwellings of which 28% should be affordable a contribution towards future housing need, a significant positive effect.	+3		+3
H) Ensuring community health and wellbeing	Cullompton is a designated town under policy S11; it has numerous services as outlined in S11 and is considered appropriate for development. The site is located some distance from the town centre. The option will have some impact on Cullompton Air Quality Management area which will require some mitigation. The option could contribute towards light and noise pollution, a slight negative effect. The site includes 1.1ha of informal open space, allowing opportunities for outdoor play. Balancing all factors, a slight negative impact is considered overall.	-1	Criteria in the policy require the implementation of a Transport Plan and other measures to minimise carbon footprints and air quality impacts. Policy S11 seeks to continue providing measures to support the implementation of the Cullompton Air Quality Action Plan including new highways links to relieve the town centre and enhance walking and cycling opportunities around the town. Overall, a neutral effect is considered.	0

I) Delivering the necessary infrastructure	The width of Colebrook Lane from Swallow Way may present difficulties with access and would need to be substantially upgraded. Development in this location would increase traffic on Tiverton Road, so would not be permissible until a new link road linking Tiverton Road to Willand Road has been provided under Policy CU1. The requirements for a transport assessment are an uncertain effect. The Mid Devon Community Infrastructure Evidence Report indicates that there is a pressing need for new primary places in Cullompton. The two schools in the town, St Andrews and Willowbank currently accept more pupils than their planned admission number for the size of the school and facilities available there. There are two secondary schools located within this Local Learning Community, including Cullompton Community College which currently has 283 places spare capacity and Uffculme School, which currently admits 113 pupils more than its planned admission number. It will therefore be necessary to expand the secondary schools in the Local Learning community.	-2	Some mitigation may be provided through seeking appropriate access points and ensuring development does not take place until the Town Centre Relief Road has been required however given the scale of this scenario, the full allocation would be significant enough to affect the wider local road network and therefore a negative effect is considered.	-2

Secondary/cumulative/synergistic effects:	The cumulative impact of the development of this site has the potential to impact upon traffic congestion and associated air quality issues. Development of the site in combination with other development in the local area could cumulatively lead to overcapacity issues in the local schools however other policies in the plan propose additional primary schools within Cullompton.
Temporary/permanent effects :Timescale: Short	Within the short term, construction traffic associated with the development may

(1-5 years), Medium (6-15 years), Long (15+ years)	exacerbate traffic problems in Cullompton however the site will only come forward following the completion of the North West Cullompton through route linking Tiverton Road to Willand Road. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Alternative Option New Site Cullompton – Tiverton Road

Land with a gross site area of 0.54 ha at Tiverton Road, Cullompton is proposed for 16 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'main cities and towns' and the 'lower rolling farmed and settled valley slopes' landscape character areas. Development of the site is unlikely to have any negative impact on biodiversity. The site is located within the existing settlement limit for Cullompton and is screened by surrounding development and therefore there is likely to be no impact on landscape character. Overall a neutral effect.	0	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review could potentially provide an improvement given that the site is currently a brownfield site. Therefore, a slight positive effect is considered.	+1
B) Protection and promotion of a quality built and historic environment	There are no listed buildings located in close proximity. This proposed development site lies to the west of an area where previous archaeological work has exposed evidence of Neolithic activity as well as Iron Age and Romano-British activity. Similar heritage assets are likely to extend into the area under consideration here. An overall slight negative and uncertain effect is considered.	-1/?	If the policy requires archaeological investigations and appropriate mitigation measures, overall a neutral effect although this remains uncertain as the impact will depend on the results of the	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			investigation.	
C) Mitigating the effects of climate change	The site falls within the Cullompton Critical Drainage Area as defined by the Environment although it is also in the lowest flood risk zone 1. There could be risk of additional development here increasing the risk of flood risk. Overall a negative effect is considered.	-2	A policy requirement in the Local Plan Review seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Policy S11 Cullompton supporting text acknowledges the Critical Drainage Area at Cullompton which provides mitigation, overall a neutral effect is considered given the mitigation.	0
D) Safeguarding and minimising resource use	This site is located on previously developed land. A positive effect.	+2		+2
E) Promoting economic growth and employment	No impact	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
F) Supporting retail	No impact	0		0
G) Meeting housing needs	Option provides for 16 new dwellings contributing towards future housing needs, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Development of the site would result in the loss of a Place of Public Worship. There could be an impact on Cullompton Air Quality Management Area which will require some mitigation. Considering the loss of community facility and the potential impact on air quality, overall a significant negative effect is considered.	-3	If mitigation is provided for air quality impacts in the policy. If relocation of the local community facility is provided a neutral effect is considered, however this is uncertain as although the promoter suggests the redevelopment would not result in the loss of a local community facility as a new better site is preferable in a better location for congregation, the promoter has not given sufficient detail to be certain of this provision. As such a neutral although uncertain effect is considered.	0/?
I) Delivering the	The site is within St Andrews' designated area. This school has no	0/?		0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
necessary infrastructure	spare capacity and is on a constrained site, limiting potential for expansion. The site is adjacent to a large development site, which would include a primary school. Primary school capacity for this site is likely to be available within the proposed primary school. Cullompton Community College currently has some spare capacity and could be expanded if additional land is secured. The site has two clear potential access routes, one adjacent to the substation and one coming through Olympian Way. Given that there are two suitable access options and that there is likely to be capacity within the new proposed primary school a neutral and uncertain effect is considered as there are various elements to school capacity that are unknown e.g. provision of new primary school on adjacent site, in-sync with the development proposed on this site.			

Secondary/cumulative/synergistic effects:	The cumulative impact of the development of this site has the potential to impact upon traffic congestion and associated air quality issues. Development of the site in combination with other development in the local area could cumulatively lead to overcapacity issues in the local schools however new primary schools are proposed within other allocations for Cullompton.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development may exacerbate traffic problems in Cullompton. Once completed the development will be permanent.

Spatial extent: (District wide/local)	This site option will help meet housing needs.

Land at Junction 27

Additional Appraisals for Land at Junction 17

Preferred Option J27 – Policy J27 – Land at Junction 27 of the M5 Motorway: 71ha mixed commercial floorspace

A site of 71 hectares between M5 Junction 27 and Willand is allocated for mixed commercial floorspace including a travel hub, agronomy visitor centre, outdoor adventure zone and outlet shopping village. The policy includes transport provision, environmental protection, a comprehensive phasing programme and public master planning exercise.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are some important trees to the north of the site and in close proximity to a number of TPOs. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. Development of this scale would have a significant impact on existing landscape character, altering the rural quality of the entrance into Mid Devon from the M5 and the rural character around Willand and Sampford Peverell. Landscape sensitivity is higher, primarily because of the lack of a relationship with an existing settlement, and the change to landscape character that would arise as a result. There are views available into the site from the west, as far as the canal in Sampford Peverell, whereas some parts feel isolated, with reduced visibility –	-3/?	The policy requires environmental protection and enhancement including noise mitigation. Furthermore Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment. The policy requires mitigation measures for the Culm	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	though some parts are visible from the motorway. There are differences in character/visibility between the north and south, the north being more open and plainly visible, the south less so. The landscape appraisal for this site noted that employment development would potentially be more damaging from residential development owing to the larger scale buildings and infrastructure needed. A Phase I habitat survey for the northern commercial element of the site (Devon Biodiversity Records Centre, June 2014) was undertaken. The site includes a variety of habitat types including Biodiversity Action Plan habitats. The mature trees and hedgerows within the site were also identified as important for biodiversity. Natural England expressed the potential for the proposed leisure and retail development at J27 to impact on the Culm Grasslands SAC due to traffic impacting the air quality. Further information regarding traffic assessments and any consequential air quality assessment on the effects on this SAC will have to be undertaken to rule out any effect. Given the scale of development, impact on the landscape, biodiversity and potential impact on the Culm Grasslands SAC, overall a significant negative impact is considered although this remains uncertain.		Grasslands SAC where appropriate and the allocation will be subject to comprehensive masterplanning. Given the scale of development some landscape and biodiversity impact is likely to remain however mitigation provided helps to minimise the impact. The area considered is less than that appraised in the Proposed Submission SA and the proposal now considers mitigation if there is an impact on the Culm Grasslands SA, as such overall a slight negative effect is considered.	
B) Protection and promotion of	Since the Proposed Submission SA, a Historic Environment Appraisal (HEA) has been carried out including an assessment of the J27 policy in the modifications document and this SA has been updated to	-2/?	The policy requires high quality development as part of the allocation. The policy also	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
a quality built and historic environment	reflect this latest assessment. The HEA identified that there are listed buildings close to the site and there may be some impact the immediate settings of these buildings. To some degree there will be an impact on the registered park and garden at Bridwell which is set on rising land to the east. To a limited degree the landscape settings of Sampford Peverell conservation area and the Grand Western Canal conservation area will also be affected. There is some uncertainty in the exact impact of the allocation given this will be dependent on site layouts, density, scale and design of buildings. This site occupies a substantial area within a landscape that has evidence of prehistoric and Roman activity, overall a negative and uncertain effect.		requires comprehensive masterplanning including at least two stages of public consultation and adoption of the masterplan as a Supplementary Planning Document before any planning application for any part of the site is determined. The HEA identifies opportunities to offset the visual impacts on the settings of various heritage assets. These opportunities are likely to be explored in detail as part of the masterplan which will provide mitigation. The potential archaeological impact at this stage could also be explored along with mitigation. As such a neutral effect is considered however this remains uncertain given the masterplan is not yet	

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			adopted.	
C) Mitigating the effects of climate change	The site contains a number of small streams but is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. The site could also contribute to surface water run off without appropriate mitigation measures. Given the scale of development carbon emissions could be high. Overall a significant negative effect and uncertain effect is considered given the potential but unknown impact of the small streams, the potential contribution to surface water run off and increased carbon emissions. Trips to the allocation are not all considered new journeys with the Mid Devon Tourism Study 2014 identifying a large volume of tourists who pass through Mid Devon on route to other destination. Furthermore, the proposal is for a niche market currently poorly provided for in the South West, arguably this proposal will reduce trip lengths of those currently seeking these services.	-2/?	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. A flood risk assessment will be required as even though the site is in flood zone 1 it is over 1ha which will determine the impact of the small steams. The proposal promotes an electric car hub and provision of transport improvement to ensure appropriate accessibility for all mods including pedestrian and cycling links across the motorway to Tiverton Parkway Railway Station. The Mid Devon Tourism Study 2014	-1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			identifies a large volume of tourists who pass through Mid Devon on route to other destination. Trips to the allocation are not all considered new journeys with some of those who would previously pass through Mid Devon anticipated to stop at this destination. Overall a slight negative effect is considered although this remains uncertain.	
D) Safeguarding and minimising resource use	Part of Junction 27 borders the Mineral Consultation Area for Hillhead Quarry. Since the Proposed Submission Sustainability Appraisal, given the smaller site area and updated Devon County Council Minerals Plan (proposed for adoption) it is considered the development of the site will not constrain future working of the remaining permitted reserves within Hillhead Quarry. The site is located on mainly greenfield land with a small portion on brownfield land. The majority of the site is Grade 3 good / moderate quality land with a small section of the site to the west of the M5 grade 4 poor quality land. Given the scale of the development, on Grade 3 agricultural land a	-2		-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	negative effect is considered.			
E) Promoting economic growth and employment	This option provides a site of 71 ha of commercial floorspace helping to diversify the economy and encourage inward investment, a significant positive effect. The policy states the allocation is for a major high quality regional tourism, leisure and retail attraction. Development in this location and at this scale has the potential to bring major inward investment and job creation for Mid Devon and the wider region.	+3		+3
F) Supporting retail	The option will deliver a 6ha designer outlet shopping centre, which will include up to 14,000 square metres of controlled comparison goods and up to 2,000 square metres of A3 uses. Since the Proposed Submission Sustainability Appraisal a number of town centre uses have been withdrawn from the earlier promoted schemes and a retail impact assessment has been used to determine the impact. This included an assessment of 14 towns and city centres including those outside of Mid Devon District and concluded that all centres would continue to achieve higher future trading turnovers than at the assessment year. The study also sets out how designer outlet villages differ from that in town centres and how they can be controlled by planning. Given the changes proposed to the policy and the findings of the retail impact assessment, the proposal significantly enhances the retail offer of the district a significant positive impact is considered.	+3	Limitations and controls provided in the policy have been provided since the previous assessment of this site. A retail impact assessment has also determined that all centres would continue to achieve higher future trading turnovers than at the assessment year. As such a significant positive impact is considered.	+3

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	No additional housing is provided within the site. The Local Plan will provide for the additional housing required in response to the employment opportunity provided by this allocation. Please see Secondary/cumulative/synergistic effects below for additional information. In assessing this site and in considering that the housing needs will be met by the Local Plan a neutral effect is considered.	0		0
H) Ensuring community health and wellbeing	The proposal differs from that assessed in the Proposed Submission Sustainability Appraisal in which it meets a regional need and not an alternative for the housing and commercial needs of the towns as such the findings of this SA differs from that of the proposed submission version. The proposal will provide some benefit to existing and future communities in which it provides leisure and retail opportunities overall a slight positive effect is considered.	+1		+1
I) Delivering the necessary infrastructure	Further assessment work is needed to identify the transport impact, sustainable transport options and strategic infrastructure requirements an uncertain effect. Essential service infrastructure including; water supply, sewage works capacity, gas and electricity will need to be determined as deliverable. Overall a negative and uncertain effect is considered.	-2/?	The policy seeks the provision of supporting access roads, parking, infrastructure and landscaping of 43ha. It requires transport improvements to ensure appropriate accessibility for all modes, including new or improved access and egress onto the M5 motorway and pedestrian and	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			cycling links across the motorway to Tiverton Parkway Railway Station. The proposal also incorporates an electric car hub. Furthermore comprehensive masterplanning is required by policy will provide greater detail on delivering the necessary infrastructure. The policy also requires environmental protection and enhancement with the supporting text referencing the provision of green infrastructure. Overall a positive effect is considered, the uncertainty remains as the detail of providing the necessary infrastructure will be considered at the masterplanning and planning application stage.	

Secondary/cumulative/synergistic effects:	A secondary effect of developing major high quality regional tourism, leisure and retail attraction at Junction 27 is the need for additional housing sites in response to the additional commercial development. This is provided for through the proposed allocation of Blundells School, Tiverton and Higher Town, Sampford Peverell. There will be a cumulative impact of traffic on the surrounding road network. The policy requires transport improvements to ensure appropriate accessibility for all modes. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Development will occur throughout the lifetime of the plan and the effect should be considered permanent.
Spatial extent: (District wide/local)	The policy set seeks to meet the employment needs of the District and wider region.

Rural Areas

Additional Appraisals for Bampton allocations

Preferred Option Bampton – Former School, School Close

Land with a gross site area of 0.7 (ha) at the Former School, School Road, Bampton is proposed for 26 residential dwellings with 38% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'River valley slopes and combes' landscape character area, which is defined as having steep, often wooded sides. An oak tree that sits within the boundary of the site should be retained. There are views over the town to the north and east, hedges and trees along Ball Hill mark the skyline to the south of the site. Wildlife corridors can be established through the site and the adjacent old school to enhance biodiversity. An ecological survey in 2009, note that dormice are known to be present in this part of Devon, rabbit tracks have been found but no badgers. Given the potential impacts on local wildlife, a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provides some mitigation. An overall neutral effect is considered.	0
B) Protection and promotion of a quality built and	The development site is not within or near the Bampton Conservation Area and development will not impact upon any Listed Buildings, a neutral effect.	0		0

historic environment				
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Bampton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water runoff but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan review seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Given the mitigation of surface water runoff and flood risk a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	This is a Greenfield site currently used as pastureland. Approximately a fifth of the site is Grade 3 good / moderate quality agricultural land and the remainder is Grade 4 poor quality agricultural land. Although the loss would be mainly poor quality agricultural land there would be some grade 3 agricultural land loss an overall slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land, a neutral effect.	0		0
F) Supporting retail	The policy contains no retail proposals; a neutral effect is considered.	0		0

G) Meeting housing needs	Option provides for 26 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Bampton is a designated village under policy S13 of the Local Plan Review and is considered appropriate for limited development. Bampton has a reasonable range of services and frequent bus services. The school is adjacent the site enabling public to walk, new development supported by existing services Overall a neutral effect is considered.	0		0
I) Delivering the necessary infrastructure	The site would gain vehicular access via West Street which on its approach to the site is narrow and has no pedestrian facilities. It may be possible to provide a footway/cycleway access between the site and School Close passing though the adjacent old school site. The feasibility of the carriageway link to the adjacent site has been considered and is acceptable, a positive effect. Primary school has recently been expanded to support increased numbers in area and existing consents. Given site access is achievable and recent expansion of school a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impact of the development of this site has the potential to impact upon traffic congestion.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic congestion within Bampton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet the employment needs of Bampton.

Additional Appraisals for Cheriton Fitzpaine allocations

Alternative Option OCF2: Cheriton Fitzpaine Landboat Farm – Amended SA commentary and scoring

Land with a gross site area of 1.91 (ha) at Landboat Farm, Cheriton Fitzpaine is proposed for 55 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are several mature trees, mainly horse chestnuts, within the site. The site is classed as being within the 'Lower rolling farmed and settled valley slopes' landscape character area. This area is defined as being predominantly open, rolling countryside (and further characterised by a tightly rolling, medium to small scale landform). Upon a further site assessment undertaken in response to a representation at the Proposed Submission stage it has been concluded that the existing development forms a backdrop of the site and therefore a neutral effect is considered in terms of landscape impact. A slight negative impact remains as there may be an impact on the mature trees within the site.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for the natural environment and a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	There are no listed buildings although there are some undesignated older (C19) farm buildings sited within the site and which may be worthy of retention as local heritage assets. As the buildings at this time are not designated as heritage assets they do not at this time hinder the score of the objective of this site, however if the buildings are to be assessed as heritage assets in future the SA will be amended to reflect this. In response to a representation made at the Proposed	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	Submission stage a further site assessment was undertaken and it is agreed that the development of the site would impact the connectivity between White Cross and the village resulting in a slight positive score overall.			
C) Mitigating the effects of climate change	A stream runs along the southern part of the site. The southwest of the site is within flood zone 2 and 3 (17%) with the remaining (83%) in flood zone 1. The site could contribute to surface water run off without appropriate mitigation measures. Overall a negative effect is considered. Cheriton Fitzpane has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service, on balance a slight negative effect is considered. This remains uncertain as the impact of the stream is unknown.	-1/?	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. If development avoided areas in flood zone 2 and 3 and a flood risk assessment is undertaken to determine the impact of the stream that runs through the centre of the southern part of the site a neutral effect is considered. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus	+1/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			service. This remains uncertain as the impact of the stream is unknown.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. Site is located on Grade 3 good / moderate agricultural land with some of the site forming agricultural buildings. Given the relatively small size of the site a slight negative impact is considered.	-1		-1
E) Promoting economic growth and employment	In the south western part of the site, there is a group of buildings which are modern, open agricultural storage buildings and other storage facilities. Also contained within the site are a group of three traditional stone barns which link together to form a central yard. In response to a representation made at the Proposed Submission stage a further site assessment was undertaken and it is agreed that the buildings identified above are vacant with no evidence of recent use, therefore there would be no loss of employment land and the pre-mitigation score is proposed to be amended to 0.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 55 new dwellings a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring	Cheriton Fitzpaine is a designated village under policy S13, it has the	0	Retention of the land used for	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
community health and wellbeing	three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect. Some of the land (the strip to the south of Cherry Meadow) already forms some form of informal recreational use with at least one resident having an opening from private gardens onto this land. Under previous planning policy this piece of land was designated as 'Important land for sport and recreation'. In response to a representation made at the Proposed Submission stage it is recognised that development of this site would link the village with White Cross and as such could improve both the built environment and community health and wellbeing. Given the provision of services and facilities, and potential for improvement of community cohesion but potential loss of some important although undesignated recreational land, a neutral effect is considered.		informal recreation and the benefit of improving community cohesion through the development of this site would result in a slight positive effect overall.	
l) Delivering the necessary infrastructure	Access into the site is via a farm track, formed within the past 10 years located approx. mid way along its northern boundary and with a large visibility splay with the Class lll road, and has new Devon banks either side; this access has replaced the original farm access road along the western edge, which has been partially blocked at its egress onto the Class lll road to only now allow for direct pedestrian access on this side. The local highway network of narrow roads has restrictive alignments and the existing access has inadequate visibility however an adequate access is considered achievable. In response to a	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	representation made at the Proposed Submission stage a further site visit was undertaken which identified that an access could be accommodated without significant works. There is existing capacity in the local schools to accommodate development from this individual site. Overall a neutral effect is considered.			

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over capacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Fitzpaine. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Alternative Option New Site Cheriton Fitzpaine – Bramble Orchard

Land with a gross site area of 2.44ha at Bramble Orchard, Cheriton Fitzpaine is proposed for 58 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural	This site lies outside of the existing settlement boundary of Cheriton Fitzpaine. The site falls within the 'Lower rolling farmed	-2	Policy S9 'Environment' and DM1 'High Quality Design' in	-2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
environment	and settled valley' landscape character areas which is typified as having a gently rolling and strongly undulating landscape which is intensively farmed. The landscape is undulating, with the higher parts more sensitive to change and development. The site is located at the top of a hill and would therefore be highly sensitive to development. There are no European wildlife sites or SSSIs located in close proximity to the site and there are no designations located within the site itself. However, the site borders Arthur's Wood which is probably a priority habitat. Given that the site is located outside of the existing settlement limit, and would have a significant negative impact on landscape character, a negative effect is considered.		the Local Plan Review would provide some mitigation. Overall a negative effect remains as the development is located outside of the existing settlement limit and would negatively impact landscape character.	
B) Protection and promotion of a quality built and historic environment	There are no listed buildings located in close proximity. Additionally, based on the information available to the Historic Environmental Record to date it is unlikely that any development will have an impact upon any heritage assets with archaeological interest. However the separation of the site from the main element of the village raises concerns about how well the final design could integrate the existing and proposed development, overall a slight negative effect is considered.	-1	Design could help provide some mitigation in integrating the development with the existing settlement, however due to the divorced nature of the site with the main settlement a slight negative effect would remain.	-1
C) Mitigating the effects of climate	There are no flood risk issues within the site boundary to be aware of. Cheriton Fitzpaine has access to a bus service which could help reduce car travel and therefore carbon emissions.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
change	Overall a slight positive effect is considered.			
D) Safeguarding and minimising resource use	Development is located on a greenfield site which is grade 3 good / moderate agricultural land. Given the size and agricultural quality of the site, a slight negative effect is considered.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No Impact.	0		0
G) Meeting housing needs	Option provides for 58 new dwellings contributing towards future housing needs, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Cheriton Fitzpaine is a designated village under policy S13 and is considered suitable for limited development. The site is divorced from the settlement which may affect community cohesion, a slight negative effect.	-1	A slight negative effect would remain as the site is divorced from the settlement.	-1
I) Delivering the necessary infrastructure	Cheriton Fitzpaine primary school has the capacity to expand through the provision of an additional classroom. The school is located on the edge of the village, so would need to consider whether a safe walking route to the school can be provided. The site is very remote from Cheriton Fitzpaine and would be reliant	-2	Policy S8 could provide some mitigation by setting out that developers would be expected to contribute to, or bear the full cost of new or improved	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	on private motor vehicles as there are no footways and no lighting. There are also concerns relating to the topography of the site and road widths which result in a poor forward visibility from the site. Overall a negative effect is considered.		infrastructure and facilities although the impact remains uncertain given that it is unclear how improved access could be provided and suitable pedestrian access. A negative although uncertain effect remains.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure of services and facilities and impact landscape character.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Cheriton Fitzpaine. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Additional Appraisals for Halberton allocations

Alternative Option New Site Halberton – The Pethers

Land with a gross site area of 0.51ha at The Pethers, Halberton is proposed for 16 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies adjacent to the designated village of Halberton. The site falls within the 'Lowland Plains' landscape character area which is typified as being an open, low lying flat landscape which is agriculturally prosperous. The Great Western Canal Conservation Area and local nature reserve lies to the west of the site but there are no European wildlife sites or SSSI designations in close proximity. The site would be relatively enclosed within the landscape due to its location between 'The Pethers' and 'Lagunas' and its position directly opposite the new housing development Cordwents View. Given the sites location in relation to existing settlement but its proximity to the Great Western Canal Conservation Area and local nature reserve, a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	There are no heritage assets located in close proximity overall a neutral effect is considered.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. Based on evidence set out in the SFRA there may be some residual flood risk from the Grand Western Canal. The site could contribute to surface water run off without appropriate	-1	Mitigation is provided by a policy requirement in the Local Plan Review which seeks the provision of a Sustainable	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	mitigation measures. Halberton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service, on balance a slight negative effect is considered.		Urban Drainage Scheme to deal with all surface water from development and arrangements for future maintenance. Appropriate mitigation measures should be incorporated into the design of development to respond to flood risk from the Grand Western Canal. Given the mitigation of flood risk a slight positive effect is considered as there is the benefit of a bus service in Halberton.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on grade 1 excellent quality agricultural land. Given the loss of Grade 1 excellent quality agricultural land but the relatively small scale of the site, a negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting	No Impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
retail				
G) Meeting housing needs	Option provides for 16 new dwellings contributing towards future housing needs, a slight positive effect is considered.	+1		+1
H) Ensuring community health and wellbeing	Halberton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Halberton Primary School currently has some spare capacity. This site would generate an additional 5 primary school pupils, which can be accommodated at the primary school. Given the small scale of development it is anticipated that this development will not as an individual site put pressure on the local secondary schools. The site would need an estate road to serve the development which may restrict the yield of housing. Given the current capacity within the local schools and that access to the site is achievable a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impact of the development of this site has the potential to impact upon traffic, put pressure on services and faciltiies and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over-capacity issues in the local schools.
Temporary/permanent effects :Timescale: Short	Within the short term, construction traffic associated with the development will increase

(1-5 years), Medium (6-15 years), Long (15+ years)	traffic along Crown Hill Road, Halberton. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Additional Appraisals for Newton St Cyres allocations

Alternative Option New Site Newton St Cyres – New Estate Site A

Land with a gross site area of 1.4ha at New Estate, Newton St Cyres is proposed for 44 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland Plains' which is typified as being an open, low lying flat landscape and the 'sparsely settled farmed valley floors' landscape character area which is typified by the presence of rivers and streams and related flat or gently sloping valley bottoms within the low lying areas of the district. The site is relatively open and flat with the surrounding landscape consisting of agricultural land, trees and occasional isolated dwellings. There are no European wildlife sites or SSSI designations located in close proximity. Overall the site has a slight negative score as the site is highly visible but there is existing development forming a backdrop.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation therefore a neutral effect is considered.	0
B) Protection and promotion of	There are no listed buildings located in close proximity. This proposed development site lies within a landscape where there is a concentration of prehistoric and Romano-British sites recorded	-1/?	Local Plan Review policy DM25 would provide some mitigation by requiring that any planning	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
a quality built and historic environment	on the County Historic Environment Record. Given the possibility of potential for archaeological assets, a slight negative and uncertain effect is considered.		application include sufficient information to enable a description of a heritage asset affected and a consideration of the impact of development upon it. Based on information from Devon County Council this may take the form a programme of intrusive archaeological investigations of areas that will be affected by development here. Overall a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located outside in flood zone 1. However, an ordinary watercourse is within the site boundary. The site could contribute to surface water run off without appropriate mitigation measures. Newton St Cyres has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issue around flooding with the presence of an ordinary watercourse and risk of surface water	0/?	Some mitigation would be provided through policy S9 'Environment' in the Local Plan Review which seeks the provision of sustainable drainage systems to deal with all surface water from the	+2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	flooding but the benefit of a bus and train service overall a neutral and uncertain effect is considered as the impact of the watercourse is unknown.		development. Based on the recommendations provided by Devon County Council, this may require that any development should be accompanied by a suitable drainage strategy to deal with existing surface water flows and any potential increase in surface runoff. Given the mitigation of flood risk using SuDS, and the availability of bus and train service, a positive effect is considered although uncertain given the presence of the ordinary watercourse within the site boundary.	
D) Safeguarding and minimising resource use	Development is located on a greenfield site which is partly (1.11ha) grade 3 good / moderate agricultural land and partly (0.29 ha) grade 1 agricultural land, a negative effect, given the size of the site.	-2		-2
E) Promoting	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
economic growth and employment				
F) Supporting retail	No Impact.	0		0
G) Meeting housing needs	Option provides for 44 new dwellings contributing towards future housing needs, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Newton St Cyres is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	There is existing capacity in the local schools to accommodate development from this individual site. Access to the site option is quite constrained; the junction at Station Road adjacent to the entrance is substandard in terms of visibility and is unlikely to be suitable for increased traffic. The road is narrow with substandard alignments and there are no footways. Highways have raised their concerns over pedestrian safety and have recommended the rejection of this allocation. Given the concerns of the highways agency a significant negative effect is considered.	-3	Policy S8 would provide some mitigation by setting out that developers would be expected to contribute to, or bear the full cost of new or improved infrastructure and facilities. Overall a negative and uncertain effect is considered given the concerns of the highway authority with the solution uncertain without	-2/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			further evidence.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to overcapacity issues in the local schools.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Newton St Cyres. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Alternative Option New Site Newton St Cyres – New Estate Site B

Land with a gross site area of 1.3ha at New Estate, Newton St Cyres is proposed for 41 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland Plains' and 'Sparsely settled farmed valley floors' landscape character areas. The site itself is relatively open and is surrounded by agricultural land, trees and the occasional isolated dwellings. There are no European wildlife sites or SSSI designations in close proximity and no specific designations within the site that would impact on biodiversity. Given that development here would impact landscape character	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation therefore a slight negative effect is considered.	-1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	with limited development backdrop, a negative effect is considered.			
B) Protection and promotion of a quality built and historic environment	There are no listed buildings located in close proximity. The site lies within a landscape where there is a concentration of prehistoric and Romano-British sites recorded on the County Historic Environment Record. 	suitable for increased traffic. The road is narrow with substandard alignments and there are no footways. Highways have raised their concerns over pedestrian safety and have recommended the rejection of this allocation. Given the concerns of the highways agency a significant negative effect is considered.		full cost of new or improved infrastructure and facilities. Overall a negative and uncertain effect is considered given the concerns of the highway authority with the solution uncertain without further evidence.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to overcapacity issues in the local schools.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase the traffic within Newton St Cyres. Once complete the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Additional Appraisals for Sampford Peverell allocations

Preferred Option SP2 – Higher Town, Sampford Peverell: 6ha, 60 dwellings

Land with a gross site area of 6 (ha) at Higher Town, Sampford Peverell is proposed for 60 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The overall rise above Turnpike is significant and there are far-reaching views to and from the site. If suitable access could be achieved, given the steep gradients, it is likely that a substantial length of hedgerow would need to be removed. Visually the character of the area is agricultural and divorced from the village, with only a few low density detached dwellings on the opposite side of Turnpike. Given the impact on the landscape but limited mitigation provided by existing development and potential loss of a substantial length of hedgerow a negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment. Furthermore the policy requires landscaping and design which respects the setting and character of the area. The policy also requires mitigation of any wildlife impact including the protection of hedgerows and provides 2 hectares of Green Infrastructure. Overall a neutral effect is considered.	0
B) Protection and	The site is adjacent to Sampford Peverell Conservation Area to	-2/?	The policy includes green	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
promotion of a quality built and historic environment	North East. The site occupies an area enclosed in the medieval period and archaeological remains associated with the earlier field system and archaeological remnants may be affected by development here. Given the potential impact on the Conservation Area and archaeology a negative and uncertain effect is considered.		infrastructure, landscaping and design which respect the setting and character of the area, conservation area and listed building. It also requires archaeological investigation and appropriate mitigation. Overall a neutral effect is considered although this remains uncertain as the impact on archaeology will depend on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Sampford Peverell has access to a bus and train service which could help reduce car travel and therefore carbon emissions. Given the potential issues around surface water run off and flood risk but the benefit of a bus and train service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan Review seeks mitigation measures through the provision of Sustainable Urban Drainage Schemes to deal with surface water run-off and arrangements for future maintenance. The surface water run off and flood risk can be mitigated and there is a	+2

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			benefit of a bus and train service, overall a positive effect is considered.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 2 very good quality agricultural land. Given the loss of very good quality agricultural land but the relatively small site area an overall negative effect is considered.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 60 new dwellings with 30% affordable housing a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Sampford Peverell is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	Since the Proposed Submission Sustainability Appraisal, there has been confirmation that access is achievable and therefore the uncertainty has been removed. The Highway Authority has advised that any development of the site should only commence	-1	Improvement of the site access would improve visibility. Policy requires no development until the	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	once improvements to the A361 junction at Sampford Peverell have been implemented. There is a footpath on Turnpike from the south east corner of the site which leads into the village. There are no footpaths on Higher Town or on Turnpike to the west. Within the village, pedestrian and cycle links are good, with access to the Grand Western Canal and the cycle path connecting the train station to Tiverton and Willand. Access onto Turnpike would require substantial hedgerow and earth removal. There is existing capacity in the local schools to accommodate development from this individual site. Given that access is achievable but would require additional works a slight negative effect is considered.		completion of improved access works to the A361. Overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site may have an impact on traffic. The policy requires no development until the completion of improved access works to the A361 to ensure the cumulative effect on the A361 is mitigated for.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase the traffic within Sampford Peverell. Once complete the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs associated with the Junction 27 option.

Additional Appraisals for Thorverton allocations

Alternative Option TH1: South of Broadlands – extended site 1.15ha, 20 dwellings

Land with a gross site area of 1.15 (ha) at South of Broadlands, Thorverton is proposed for 20 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is partially screened by the topography of the land adjacent to the east, known as Peter's Hill. There are distant views of the site from the west, but this could be limited through the use of screening. The site itself is fairly level and there would be limited visual impact on the character of Thorverton. As there are distant views of the site from the west a slight negative effect is considered.	-1	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide mitigation and therefore, and overall neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	The site lies just to the north of a large, probably prehistoric enclosure site, a slight negative and uncertain effect.	-1/?	The policy will require archaeological investigation and appropriate mitigation, a neutral effect is considered overall although this remains uncertain as the impact will depend on the results of the investigation.	0/?

C) Mitigating the effects of climate change	Part of the site (south eastern) is within Zone 3 Source Protection Zone. The site is located in flood zone 1, the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures. Thoverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered.	-1	A policy requirement in the Local Plan seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. As the site is within a Source Protection Zone, appropriate forms of sustainable urban drainage should be used, overall a neutral effect.	0
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 1 agricultural land. As the site is small scale but is on excellent quality agricultural land a negative impact is considered.	-2		-2
E) Promoting economic growth and employment	Site option does not result in the loss or gain of employment land, a neutral effect.	0		0
F) Supporting retail	Site option does not contain any retail proposals, a neutral effect.	0		0
G) Meeting housing needs	Option provides for 20 new dwellings with 30% affordable a contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community	Thorverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered	-2	If the allotments were provided elsewhere of similar	+1/?

health and wellbeing	appropriate for a limited level of development, a neutral effect. Development of the site would result in the loss of allotments overall a negative effect is considered.		accessibility the loss of allotments would be mitigated and therefore this impact would be neutral. The policy requires a road widening and provision of a footpath along site frontage which in this case will be beneficial for the wider community as well as the development. Overall a slight positive effect is considered although this is uncertain given an alternative location for the allotments has not been indicated.	
I) Delivering the necessary infrastructure	Access is achievable but would require road widening and footway link. The size of this alternative would require the road to be built to an adoptable standard with a carriageway width of 4.8m and 2x2m footways either side in order to provide adequate visibility to and from oncoming traffic. The access road would need to go through the garages currently near the site. The Mid Devon Community Infrastructure Evidence Report indicates that the local secondary school has capacity however; Thorverton primary school is at overcapacity. The school is popular and has historically admitted pupils from outside its catchment area. Despite the forecast	-3	Policy S8 provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new improved infrastructure and facilities. Overall a neutral effect is considered. If the policy requires road widening built to an adoptable standard with a carriageway width of	0/?

	showing the school to be overcapacity, it is likely that children within the small development will be able to secure a place at the school but developer contributions will be required. Given the need for significant road improvements and footway link and the requirement for developer contributions to provide capacity at the school a significant negative effect is considered.		4.8m and 2x2m footways either side in order to provide adequate visibility this would mitigate any impact and a neutral score is considered. However this would require the garages to be in control of the applicant in order to meet this standard, given the garages are not in control of the applicant an uncertain effect remains.	

Secondary/cumulative/synergistic effects:	Development of this site in combination with other development in the local area could cumulatively lead to overcapacity issues in the other schools.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Thorverton. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Alternative Option New Site Thorverton – Land North East of Silver St

Land with a gross site area of 0.35 ha at the North East of Silver Street, Thorverton is proposed for 13 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland Plains' landscape character area which is typified as being an open, low lying flat landscape. Most parts of the site are well enclosed within the landscape with no far reaching views other than towards the south whereby views consist of agricultural fields and trees. The site is enclosed by a hill towards the south and existing housing development towards the east and west. Given that development of this site would have a good relationship with existing development a neutral effect is considered.	0		0
B) Protection and promotion of a quality built and historic environment	There are no listed buildings located in close proximity. In addition, based on the information available to the Historic Environment Record to date, any development here will have no impact upon any heritage assets with archaeological interest. Therefore, a neutral effect is considered.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk. There are a no flood risk issues within the site boundary to be aware of. Thorverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Overall a slight positive effect is considered.	+1		+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
D) Safeguarding and minimising resource use	The site is located on a greenfield site which is grade 2 good quality agricultural land. A negative effect.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 13 new dwellings contributing towards future housing needs, a slight positive effect.	+1		+1
H) Ensuring community health and wellbeing	Thorverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The Mid Devon Community Infrastructure Evidence Report indicates that the local secondary school has capacity however Thorverton primary school is at overcapacity. The school is popular and has historically admitted pupils from outside its catchment area. Despite the forecast showing the school to be overcapacity, given the scale of the development it is likely that	-1	Policy S8 would provide some mitigation by setting out that developers would be expected to contribute to, or bear the full cost of new or improved infrastructure and facilities.	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	children within this individual small development could secure a place at the school but developer contributions will be required. There are no significant constraints in terms of access, subject to an appropriate estate road. Given suitable access route, but limited capacity in the local Primary School, a slight negative effect is considered.		Overall a neutral effect is considered.	

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site could lead to overcapacity issues in the local schools.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Thorverton. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Alternative Option New Site Thorverton – Land to the West of Lynch Close and Cleaves Close

Land with a gross site area of 1.32 ha at the West of Lynch Close and Cleaves Close, Thorverton is proposed for 41 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site falls within the 'Lowland Plains' landscape character area. The site is relatively enclosed by housing on the eastern side and hedgerows and trees surrounding the remainder. Given the	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	minimal impact on landscape character and the sites relationship to existing settlement, a neutral effect is considered.			
B) Protection and promotion of a quality built and historic environment	There is a grade II listed building (Higher Dunsaller) located adjacent to the southern boundary of the site. Furthermore, the site occupies a position in the landscape where prehistoric activity is recorded in the County Historic Environment Record. Given the sites close proximity to a listed building and the potential for archaeological assets, a negative and uncertain effect is considered.	-2/?	Local Plan Review policy DM25 would provide some mitigation by requiring that development proposals consider the significance, character, setting and local distinctiveness of heritage assets and any opportunities to enhance them. In addition, policy requires that any planning application include sufficient information to enable a description of a heritage asset affected and a consideration of the impact of development upon it. Based on information from Devon County Council this may take the form of 1) an archaeological geophysical	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			survey and 2) a programme of intrusive archaeological investigation of areas that will be affected by development here. Overall a neutral effect although this remains uncertain as the impact will depend on the results of the investigation.	
C) Mitigating the effects of climate change	The site is located in flood zone 1. There are a no flood risk issues within the site boundary to be aware of. Thorverton has access to a bus service which could help reduce car travel and therefore carbon emissions. Overall a slight positive effect is considered.	+1		+1
D) Safeguarding and minimising resource use	The site is located on a greenfield site which is grade 1 excellent quality agricultural land. A negative effect, given the size and scale of the site.	-2		-2
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
G) Meeting housing needs	Option provides for 41 new dwellings contributing towards future housing needs, a positive effect is considered.	+2		+2
H) Ensuring community health and wellbeing	Thorverton is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development, a neutral effect.	0		0
I) Delivering the necessary infrastructure	The Mid Devon Community Infrastructure Evidence Report indicates that the local secondary school has capacity however Thorverton primary school is at overcapacity. The school is popular and has historically admitted pupils from outside its catchment area. There may also be opportunities for expansion if required. There are no significant constraints in terms of access; there are possible access junctions from both north and south. The southern road presents greater opportunity to provide footway and road widening. Given suitable access route, but limited capacity in the local Primary School, a slight negative effect is considered.	-1	Policy S8 would provide some mitigation by setting out that developers would be expected to contribute to, or bear the full cost of new or improved infrastructure and facilities although the impact remains uncertain given the limited capacity to expand the school. Overall a neutral effect is considered given that there is limited capacity to expand the school.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon

	traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site could lead to overcapacity issues in the local schools.
Temporary/permanent effects :Timescale: Short (1-5 years), Medium (6-15 years), Long (15+ years)	Within the short term, construction traffic associated with the development will increase within Thorverton. Once completed the development will be permanent.
Spatial extent: (District wide/local)	This site option will help meet housing needs.

Additional Appraisals for Uffculme allocations

Alternative Site Option - Land west of Uffculme, Uffculme

Land with a gross site area of 3.49 (ha) at Uffculme is proposed for 60 dwellings. Following an appeal decision in February 2016 allowing outline planning permission for a site of 3.49ha with 60 dwellings, the site has been reappraised taking into account the revised proposal and inspectors comments.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site is within the 'Lowland plains' landscape character area. This area is characterised by having an open, low lying flat agricultural landscape. The fields to the north of the B3340 are partially screened from views by the existing field boundaries. The southern field is more open, and offers wider and more distant views to the south, therefore potential landscape impacts. A large number of protected trees adjoin the site on the eastern boundary. As there are distant views to the south and a number of protected trees adjoining the site overall a negative impact is considered.	-2	The appeal decision applies a condition for the submission of an arboricultural method statement and tree protection plan which will ensure the retention of existing trees in the interest of public amenity and the character and appearance of the area. Policy	0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment a neutral effect is considered.	
B) Protection and promotion of a quality built and historic environment	This site occupies a substantial area where prehistoric activity is recorded in the wider landscape. The site is located opposite from the boundary of Bridwell Park, a nationally important grade I listed historic park and garden. However there is little intervisibility between the site and the nearest boundary point, there is an intervening parcel of land and there is screening by hedgebanks and trees along the boundaries of this intervening land, the Historic Environment Appraisal considers there to be no significant impact. An appeal was dismissed in 2007 in Uffculme on the basis that the woodland to the east of this site provides and important and attractive feature defining the end of the village and functioning as an appropriate settlement boundary. However in the more recent appeal decision in 2016. The inspector makes reference to the 2007 appeal decision and although does not disagree with the above observation states that the reference was made in a different context and for the proposal in question considered by this appraisal there	-1/?	The appeal decision applies a condition to secure a scheme of archaeological work with the aim of recording of any features of heritage interest. Overall with mitigation the site scores a neutral effect although the score remains uncertain given the impact on the prehistoric activity is unknown.	0/?

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
	would be no material harm to the character or appearance of the area. A slight negative effect overall is considered given the potential impact on the area of prehistoric activity. Uncertainty is also considered as the impact on the prehistoric activity is unknown.			
C) Mitigating the effects of climate change	The site area includes some flood zone 2 and 3 with the majority of the site located in flood zone 1 the lowest level of flood risk. The site could contribute to surface water run off without appropriate mitigation measures, a negative effect overall. Uffculme has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issues around flooding but the benefit of a bus service on balance a slight negative effect is considered.	-1	The 2016 appeal decision notes that development can be confined to Flood Zone 1 and the Environment Agency does not object to the development. A condition is applied to require the details of materials, boundary treatments, finished floor levels, existing and proposed site levels and proposed road and footpath levels to be included within the reserved matters which will help address flood risk. A condition is also secured to ensure that a surface water drainage scheme is required for the Council's approval and this should be based on SUDs	+1

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
			principles and that dwellings are not occupied until sufficient capacity exists within the public sewerage network. With mitigation and the benefit of a bus service a slight positive effect is considered.	
D) Safeguarding and minimising resource use	Development option is located on greenfield land. The site is located on Grade 3 and 4 agricultural land and is relatively small therefore an overall a slight negative impact.	-1		-1
E) Promoting economic growth and employment	No impact.	0		0
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for 60 new dwellings with 35% affordable housing. A contribution towards future housing need, a positive effect.	+2		+2
H) Ensuring community	Uffculme is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered	0		0

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
health and wellbeing	appropriate for a limited level of development, a neutral effect. The previous SA noted that the location of this site would result in long walking distances to village facilities, with particular reference to the site being 1 mile from the primary school which could restrict young children walking to school however in the 2016 appeal decision the inspector states that in his view the appeal site is within an acceptable and safe walking distance of the village services and facilities. As such overall a neutral effect is considered.			
I) Delivering the necessary infrastructure	Site access is achievable subject to any development requiring the extension of the 30 mph limit. The footway at Culm Valley Way would need to be extended to the site. The Mid Devon Community Infrastructure Evidence Report indicates that the primary school can accommodate additional pupils arising from this development without expansion. Given an adequate site access is achievable but the need for footways an overall slight negative effect is considered.	-1	In the interests of highway and pedestrian safety, the appeal decision in 2016 applies a condition to ensure that vehicular access and footway linking the site to the village is provided prior to occupation of the dwellings. Overall a neutral effect is considered.	0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to over-capacity issues in the local schools.

Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic within Uffculme. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help provide housing in Uffculme.

Additional Appraisals for Willand allocations

Alternative Option WI1: Land east of M5, extended area 14.8ha, 174 dwellings

Land with a gross site area of 14.8 (ha) at land east of M5, Willand is proposed for 174 dwellings with 30% affordable housing.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	The site lies within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. The site is generally flat in nature, and is well screened from views from the west into the site. The existing adjacent housing to the east is well screened by the high trees, and therefore any new developments would only represent an impact when viewed from the west. There is evidence of otters within one of the fields. The site adjoins two areas of deciduous woodland priority habitats, one in the north east and one in the south west. The site is surrounded by hedgerows which can be a haven for wildlife. Given the scale of development which may have an impact on the landscape but the proximity of the site to existing development and the M5 an overall negative impact is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review would provide some mitigation however given the scale of the site a slight negative effect is considered to remain.	-1

B) Protection and promotion of a quality built and historic environment	No anticipated impact on any known heritage assets, a neutral effect is considered.	0		0
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. There is a 25-50% chance of groundwater emergence within the site boundary. Evidence in the SFRA suggests that the site may also have some residual flood risk from the Grand Western Canal or Wimbleball Reservoir. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water runoff and flood risk and the potential for large scale impacts on groundwater, a negative effect is considered.	-2	A policy requirement in the Local Plan Review seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Appropriate mitigation measures should be incorporated into the design of development to respond to the flood risk from the Grand Western Canal or Wimbleball Reservoir. Given the mitigation of surface water runoff and flood risk a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising	Development option is located on greenfield land. Approximately 7 ha of the site lies within grade 1 excellent quality agricultural land and 6.4 ha lies within grade 3 good / moderate agricultural land.	-2		-2

resource use	Overall a negative effect is considered as development of the site would result in the loss of grade 1 agricultural land.			
E) Promoting economic growth and employment	Option provides approximately 174 new dwellings. Development of this scale would be a boost to local construction firms and associated trades who would benefit from being able to undertake contract work on the site. There would therefore be some positive impact.	+1		+1
F) Supporting retail	This option proposes a large scale residential development within a village. The policy contains no retail proposals, a neutral effect.	0		0
G) Meeting housing needs	Option provides for 174 new dwellings with 30% affordable housing a contribution towards future housing need, a significant positive effect.	+3		+3
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The site is located within Cullompton catchment area and therefore has possible off-site air quality impact within Cullompton AQMA. There are also possible concerns regarding developing new housing in close proximity to the M5 whereby noise impact may negatively affect residential amenity. A Public Right of Way runs through the site. The scale of development may also impact community facilities therefore on balance a significant negative effect is considered overall.	-3	The policy should require the provision of a buffer zone and appropriate planting to mitigate noise from the adjacent motorway. It should also require the retention and enhancement of the Public Right of Way. DM4 'Pollution' also provides some mitigation. As the policy requires 'enhancement' of the public right of way which is a slight positive impact but the scale	0

			of development may affect community facilities on balance a neutral effect is considered.	
I) Delivering the necessary infrastructure	An adequate access is achievable and numbers would be dependent on Transport Assessment of the junction with Silver St. Given the scale of development the site may need to deliver a large amount of road infrastructure. The Mid Devon Community Infrastructure Evidence Report indicates that the primary school can accommodate additional pupils arising from this development without expansion. Overall a negative and uncertain effect is considered given the potential for impact on highways and the need for a transport assessment.	-2	Policy S8 provides some mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities. The policy requires a transport assessment of capacity at the junction of Silver Street and Meadow. As mitigation is dependent on the outcome of the transport assessment a neutral although uncertain effect is considered.	0/?

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic, put pressure on services and facilities and the current provision of infrastructure. Development of this site in combination with other development in the local area could cumulatively lead to overcapacity issues in the local schools.
Temporary/permanent effects: Timescale: Short (1-5 years),	Within the short term, construction traffic associated with the development will

Medium (6-15 years) Long (15+ years)	increase traffic within Willand. Once completed, the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Alternative Option WI2: Willand Industrial Estate full site area option

Land with a gross site area of 9.2 (ha) at Willand Industrial Estate, Willand is proposed for 22,000 sqm commercial floorspace.

Sustainability objective	**Commentary**	**Impact**	Mitigation	Post Mitigation
A) Protection of the natural environment	There are a number of protected trees in the site near the south eastern boundary. The site is hidden from the settlement by vegetation. The site area abuts the M5 and may be seen from the M5 if it is developed. The site falls within the 'Lowland plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. Given the loss of protected trees and potential visual impact of the site, a negative effect is considered.	-2	Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment a neutral effect. As the site may be visible from the M5 is developed a slight negative effect is considered.	-1
B) Protection and promotion of a quality built and historic environment	Previous archaeological work undertaken on this site demonstrated the presence of prehistoric activity within this site, a slight negative and uncertain effect. The location of the site, on the edge of the settlement adjoining existing commercial development is considered a sustainable location for employment growth. On balance a neutral effect is considered although there is some	-1	Archaeological investigation and mitigation is required by this policy, which improves the impact score, although this remains uncertain as the impact will depend on the	+1/?

	uncertainty remaining due to the potential impact on the area of prehistoric activity within the site.		results of the investigation. As the site is on the edge of the settlement adjoining existing commercial development and is considered a sustainable location for employment growth a slight positive effect is considered.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water run off without appropriate mitigation measures, a slight negative effect. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water run off but the benefit of a bus service on balance a neutral effect is considered.	0	A policy requirement in the Local Plan Review seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Given the mitigation of surface water run off a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	The site is located on part greenfield and part brownfield land, a neutral effect.	0		0
E) Promoting economic growth and employment	Option provides 22,000 sqm of commercial floorspace helping to diversify the economy, provide opportunities for local employees, reduce out-commuting and encourage inward investment, a positive effect.	+3		+3

F) Supporting retail	No impact.	0		0
G) Meeting housing needs	No impact.	0		0
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The allocation of commercial land within Willand could decrease air quality within the settlement through increased traffic movement and in particular HGV movements, a slight negative effect.	-1	DM4 Pollution provides mitigation, a neutral effect overall.	0
I) Delivering the necessary infrastructure	Much of the site infrastructure is already in place and there is existing access into the site which could be improved to cover the whole of the site, a neutral effect.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site has the potential to impact upon traffic congestion.
Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will contribute towards traffic congestion within Willand. Once completed the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet the employment needs of Willand.

Alternative Option WI2: Willand Industrial Estate residential 2.2ha, 53 dwellings

Land with a gross site area of 2.2 (ha) at Willand Industrial Estate, Willand is proposed for 53 dwellings.

Sustainability objective	Commentary	Impact	Mitigation	Post Mitigation
A) Protection of the natural environment	There are a number of protected trees in the site near the south eastern boundary. The site is hidden from the settlement by vegetation. The original site area abutted the M5 and may be seen from the M5 if it is developed. The site falls within the 'Lowland Plains' landscape character area and is typified as being an open, low lying flat landscape which is agriculturally prosperous. Given the loss of protected trees and potential visual impact of the site, a negative effect is considered.	-2	The site area has been redrawn to only include the south east section and therefore the visual impact of the development to be seen from the M5 has been minimised. Policy S9 'Environment' and DM1 'High Quality Design' in the Local Plan Review provide mitigation for both the impact on the landscape and the natural environment, overall a neutral effect is considered.	0
B) Protection and promotion of a quality built and historic environment	Previous archaeological work undertaken on this site demonstrated the presence of prehistoric activity within the site. The location of the site, on the edge of the settlement adjoining existing commercial development is considered a sustainable location for employment growth and subsequently, this is an unsuitable location for housing, being surrounded on three sides	-3/?	Archaeological investigation and mitigation should be required by this policy, which improves the impact score, although this remains uncertain as the impact will	-2/?

	by existing and forthcoming employment development. Overall the combined potential effect on the area of prehistoric activity within the site and the negative effect of the site being an unsuitable location for housing would lead to a significant negative and uncertain effect.		depend on the results of the investigation. However, as the site is an unsuitable location for housing, being surrounded on three sides by existing and forthcoming employment development, a negative and uncertain effect remains.	
C) Mitigating the effects of climate change	The site is located in flood zone 1 the lowest level of flood risk, a neutral effect. The site could contribute to surface water runoff without appropriate mitigation measures, a slight negative effect. Willand has access to a bus service which could help reduce car travel and therefore carbon emissions. Given the potential issue around surface water runoff but the benefit of a bus service on balance, a neutral effect is considered.	0	A policy requirement in the Local Plan Review seeks the provision of a sustainable urban drainage scheme to deal with all surface water from the development. Given the mitigation of surface water runoff a slight positive effect is considered as there is the benefit of a bus service.	+1
D) Safeguarding and minimising resource use	The site is located on part greenfield and part brownfield land, a neutral effect.	0		0
E) Promoting economic growth and	Option does not result in the loss or gain of employment land. A neutral effect.	0		0

employment				
F) Supporting retail	No impact.	0		0
G) Meeting housing needs	Option provides for approximately 53 dwellings, a contribution towards future housing needs, a positive effect.	+2		+2
H) Ensuring community health and wellbeing	Willand is a designated village under policy S13, it has the three essential services identified in policy S13 and is considered appropriate for a limited level of development. The allocation of housing land in Willand could decrease air quality within the settlement through increased traffic movement. The site is unsuitable for housing development as it is surrounded on three sides by existing and forthcoming employment development which would result in a negative impact on community cohesion and living environment. This would result in a combined significant negative effect.	-3	Policy DM4 'Pollution' in the Local Plan Review provides mitigation, however the location of the development cannot be mitigated as such a negative effect remains.	--2
I) Delivering the necessary infrastructure	Much of the site infrastructure is already in place and there is existing access into the site which could be improved to cover the whole of the site, a neutral effect. There is existing capacity in the local schools to accommodate development from this individual site. Overall a neutral effect is considered.	0		0

Secondary/cumulative/synergistic effects:	The cumulative impacts of the development of this site have the potential to impact upon traffic congestion.

Temporary/permanent effects: Timescale: Short (1-5 years), Medium (6-15 years) Long (15+ years)	Within the short term, construction traffic associated with the development will increase traffic in Willand. Once completed, the development will be permanent.
Spatial extent: (District wide / local)	This site option will help meet housing needs.

Annex 4 – Revised Sustainability Appraisal of Plan

The development of the Local Plan Review has been an on-going and iterative process with key pieces of evidence influencing the selection and rejection of options. Through the Local Plan Review Proposed Submission Consultation (2015) a number of alternatives were proposed, along with the presentation of new information. As a result a number of modifications to the proposed policies and supporting text of the plan are proposed. The full details of these proposed alternatives and new information are provided in annex 2 and 3. Annex 2 also sets out the reasons for selecting/rejecting the alternatives proposed. This annex summarises the main changes to the Local Plan Review following the appraisal of alternatives set out in annex 2, and assesses the overall sustainability of the Local Plan Review.

Strategic Policies

Policy S2: Amount and Distribution of development

An alternative to amend the dwelling target to 7,860 to meet the objectively assessed housing need (OAN) with the additional housing requirements of Junction 27 is preferred due to new information presented in the finalised Strategic Housing Market Area report which became available during the consultation on the Local Plan Review Proposed Submission (2015) and following the Council decision on 22nd September 2016 to propose to allocate land at Junction 27 for a strategic scale employment site. Similarly the higher commercial growth scenario including the Junction 27 option is proposed as a modification to the plan.

Policy S3: Meeting housing needs

Updates to the policy are proposed given the change to the OAN suggested in policy S2.

Policy S4: Ensuring housing delivery

Updates to the policy are proposed given the change to the OAN suggested in policy S2.

Policy S5: Public open space

A change to the wording is proposed to clarify that the policy refers to the parish boundaries of the settlements noted.

Policy S12: Crediton

An additional criterion is proposed in the policy which is as follows 'community and education facilities and other infrastructure to support the development proposed' to reflect the need for a new primary school in Crediton.

Policy S14: Countryside

The removal of reference to the provision of gypsy and traveller accommodation in this policy is proposed to ensure the Plan is in conformity with national policy in which the 'Planning Policy for Traveller Sites' (2015) which requires that new sites for travellers should be very strictly limited in open countryside that is away from existing settlements or outside areas allocated in the development plan.

Site Allocations

Tiverton

TIV1-TIV5 Eastern Urban Extension

The policy is proposed to be amended to consider a housing range of 1580-1830 which reflects the permissions granted on area A and the potential for increased density in area B.

TIV14 Wynnards Mead

The policy is proposed to be deleted to reflect new information regarding the historic environment and flood risk.

OTIV4 Blundells School (Proposed for allocation TIV16)

This site is proposed to be allocated following the Council decision on the 22nd September to allocate land at Blundells School for residential development. New information provided includes the support of developing the site from the Environment Agency which has resulted in this proposed policy scoring more positively than the option considered in the Local Plan Review Proposed Submission consultation (2015).

Cullompton

CU1-CU6 North West Cullompton

Contributions from development to the Town Centre relief road and Junction 28 are proposed as modifications to the policy. In line with the adopted North West Cullompton masterplan a change to the total commercial floorspace is proposed. The re-allocation of land to the south west of the site is also proposed.

CU7-CU12 East Cullompton

An additional criterion is proposed to ensure the setting of listed buildings adjoining the site is respected.

CU19 Town Centre Relief Road

~~Two additional criteria are proposed to ensure the protection of the setting of listed buildings and conservation area, and the provision of archaeological investigation and mitigation.~~

~~CU20 Cullompton Infrastructure~~

~~An additional criterion to state 'provision of works to reduce flood risk' has proposed as a modification to the plan.~~

~~Crediton~~

~~CRE2 Red Hill Cross, Exhibition Road~~

~~Additional supporting text is proposed to reflect the recommendation in the HEA to provide appropriate mitigation for Shobrooke Park to the east.~~

~~CRE3 Cromwells Meadow~~

~~Additional supporting text is proposed to reflect the recommendation in the HEA to provide appropriate mitigation for Shobrooke Park to the east. An additional criterion is also proposed to ensure archaeological investigation and mitigation.~~

~~CRE4 Woods Group~~

~~Additional supporting text is recommended which identifies non-listed heritages within the site.~~

~~CRE5 Pedlerspool~~

~~Amendment to the policy is made which includes the provision of a new school but removes the extra care scheme element in the policy.~~

~~CRE7 Stonewall Lane~~

~~A change to the supporting text of the Plan is recommended to ensure that adequate landscaping is provided to protect the heritage assets associated with the adjoining Creedy Park.~~

~~CRE10 Land south of A377~~

~~A change to the policy is proposed to include a small area to the south of the allocation up to the edge of the swale, covered by recent consent sought by Mole Avon. Although the scoring is lower for the pre-mitigation score of objective c) mitigating the effects of climate change, it is considered appropriate and reasonable to allocate the original site area which has outline consent. Detailed design to mitigate flood risk will be considered at the reserved matters planning application stage. Mitigation through sensitive design with appropriate~~

choice of materials and landscaping is also recommended for inclusion within the policy. An amendment to the supporting text is further proposed to make reference to the latest flood data and implications from redevelopment with mitigation measures such as layout, site and flood levels.

CRE11 Crediton Infrastructure

The following criterion is proposed for inclusion 'provision of works to reduce flood risk'.

Junction 27

Junction 27, M5 Motorway

An additional policy is proposed to reflect the Council decision on 22nd September 2016 to allocate land for tourism, leisure and retail at Junction 27 of the M5 motorway. Changes to the policy are reflected in the sustainability appraisal.

Rural Areas

School Close, Bampton

An allocation for 0.54(ha) 26 dwellings is proposed as a modification to the Plan. The site is currently allocated and was omitted in error as some of the site has been built out. For consistency, similar to other sites in the plan, the remaining area of the allocation which has not yet been built is proposed to remain as an allocation in the Plan.

CH1 Barton, Chawleigh

An additional criterion to state 'design solutions which respects the setting of the conservation area and listed building' is proposed. An amendment to the supporting text is also proposed to ensure appropriate landscaping to mitigate any potential impact on the conservation area and listed buildings.

CF1 Barnshill Close, Cheriton Fitzpaine

An additional criterion to minimise the impact on the conservation area and listed building is proposed.

HA1 Land adjacent Fishers Way, Halberton

An amendment to policy HA1 is proposed to delete reference to the need to 'archaeological investigations and appropriate mitigation measures' given the new information provided by the Devon County Council Archaeology Team that the proposed allocation will not impact on any known heritage assets and state that they would not need to be consulted should an application come forward. The addition of a criterion to ensure mitigation through

appropriate design, materials and landscaping is proposed to protect the setting of Halberton conservation area is also proposed.

HE1 Depot, Hemyock

This site is proposed for deletion given the representations made during the Local Plan Review Proposed Submission (2015) consultation raises an issue with the deliverability of the site during the plan period and is therefore no longer considered a reasonable alternative. The site will have a limited impact on the Local Plan as a whole given its size of 10 dwellings and may still come forward as a windfall site as it falls within the settlement limit.

NE1 Court Orchard, Newton St Cyres

A change to the policy and supporting text is proposed to ensure design which respects the setting of the conservation area.

OSP1 Higher Town, Sampford Peverell (Proposed for allocation SP2)

This site is proposed to be allocated following the Council decision on the 22nd September to allocate land at Higher Town for residential development. Since the proposed submission SA there has been confirmation that access is achievable and therefore the uncertainty has been removed.

OUF3 Land west of Uffculme (Proposed for allocation UF1)

A change to the plan is proposed to allocate this site given a 2016 appeal decision (APP/Y1138/W/15/3025120) allowing outline planning permission for a site of 3.49ha with 60 dwellings. Conclusions in the inspectors report have fed into the sustainability appraisal in which objectives b) built and historic environment and h) ensuring community health and wellbeing score more positively.

WI2 Willand Industrial Estate

The full allocation of 9.2ha, 22,000sqm of commercial floorspace is proposed to be allocated given that the Council's original reasons for not allocating the full site have been addressed as the remainder of the site is now deliverable.

Managing Development

DM28 Other protected sites

The inclusion of reference to compensatory measures is proposed as a change to the policy to raise that in some cases where mitigation measures are not possible then compensatory measures may be appropriate.

Secondary/Cumulative/Synergistic impacts

Tiverton

Additional detail has been provided in the supporting text of S10 to reflect the cumulative traffic impacts on Junction 27 to be considered.

Cullompton

Additional criterion and supporting text has been included under a number of Cullompton allocation policies to reflect the cumulative impact on the road network.

Crediton

Additional text is provided in CRE7 is recognise the need for a Transport Assessment that will comprehensively assess the transport issues related to the development of the site, taking into account the potential cumulative impact of nearby allocations.

J27 Commercial Development

Additional evidence since the previous SA was commissioned specifically to examine the potential related housing implications of the proposed strategic scale employment site at Junction 27 on the M5 motorway. The results suggest a need of an additional 260 dwellings within Mid Devon District Council over the plan period. A Habitat Regulations Assessment of the Mid Devon Local Plan Review including Junction 27 has been undertaken which concludes that the J27 site allocation, alone or in combination with the Local Plan proposals, will not have an adverse effect on the integrity of the Culm Grasslands SAC.

Overall Sustainability of the Local Plan Review

In this latest update to the SA, changes to the Plan are proposed to take into account comments from representations, additional reasonable alternatives considered and new information presented including the latest national policy changes. Updates from the latest appeal decisions and planning applications have also been taken to account to ensure policies proposed are as up-to-date as possible.

Of the changes, the majority propose minor alterations to the proposed policies or supporting text. The main amendments to the Plan include the proposed allocation of land at Junction 27 of the M5 motorway and associated housing and an amended housing total to reflect the most recent evidence on the housing needs in the area. OSP1, Sampford Peverell (proposed as SP4 within the plan) and OTIV4, Blundells School (proposed as TIV16 within the plan) are proposed for allocation in response to the housing implications of allocating the strategic scale employment site at Junction 27 of the M5 motorway. The option to include Junction 27 presents a significant positive impact on promoting economic

~~growth and employment. Controls are set in policy to ensure aspects such as retail development is supported, necessary infrastructure is delivered and housing need is met. As such overall it is considered to result in a positive impact on the plan.~~

~~Wynnards Mead, Tiverton (contingency site) is proposed for deletion due to new evidence provided in relation to issues around flooding and the historic environment. School Close, Bampton (proposed as BA4 within the plan) has been included, which was previously omitted in error. HE1 Deport, Hemyock is proposed for deletion due to an issue of its deliverability within the plan period. OUF3 Land West of Uffculme is also included as an allocation following a 2016 appeal decision (APP/Y1138/W/15/3025120), allowing outline planning permission for a site of 3.49ha with 60 dwellings. Also the full allocation of 9.2ha, 22,000sqm of commercial floorspace is proposed at Willand Industrial Estate given that the Council's original reasons for not allocating the full site have been addressed as the remainder of the site is now deliverable.~~

~~In general, the emerging Local Plan Review has been found to have a wide range of positive and significant positive effects on the objectives both cumulatively and through individual policies, although a number of potentially adverse impacts still remain. Recommendations made in previous iterations of the SA report and this updated SA report as well as controls through policy has provided mitigation for potential adverse effects. Of the main changes proposed in this iteration of the SA, the main negative impact on the Local Plan Review as a whole is the deletion of a contingency site (Wynnards Mead, Tiverton). The deletion of this policy reduces the flexibility of the Plan as a whole given the role of contingency sites in ensuring housing delivery during the Plan period. However on balance the sustainability issues of the site outweigh the benefit of the inclusion of the contingency site. Two other contingency sites in the plan remain and therefore flexibility still remains in the Plan. The other changes to the Plan are considered largely beneficial with the new information and therefore amount to an overall positive effect.~~

Sustainability Appraisal (SA) of the implications of the Council's proposed draft Main Modifications in relation to the housing trajectory and the remedies suggested by the Inspector

July 2019

1.0 Introduction

1.1 Main hearings for the examination of the Mid Devon Local Plan Review 2013 – 2033 were held in February 2019.

1.2 The Inspector issued his post hearing advice note on 21st May 2019. In this advice note he expressed concern about the housing trajectory in the early years of the Plan in particular, and he suggested remedies to maintain a five-year supply of deliverable housing sites (that may require potential Main Modifications to the Plan).

1.3 The Council has prepared in draft a Housing Land Supply Update (June 2019) indicating its proposed response to the Inspector's post hearings advice note. This sets out proposed draft Main Modifications that follow the Inspector's suggested remedies to address his concerns about the housing trajectory.

1.4 This Sustainability Appraisal report assesses the Sustainability Appraisal (SA) implications of the Council's proposed draft Main Modifications in relation to the housing trajectory and the remedies suggested by the Inspector.

1.5 All of the sites assessed in this Sustainability Appraisal report have previously been assessed as part of the Council's Sustainability Appraisal (SA) of the Mid Devon Local Plan Review 2013 -2033[1] (i.e. they are not new sites that have not previously assessed by the Sustainability Appraisal). The purpose of this Sustainability Appraisal report is to assess whether the proposed draft Main Modifications affecting those previously assessed sites have significant implications for the Sustainability Appraisal.

1.6 In summary, the findings of this Sustainability Appraisal report are that the Council's proposed draft Main Modifications will not have a material change on the previous assessment of those sites in the Sustainability Appraisal. Additionally, the findings of this Sustainability Appraisal report are that the assessment of further "reasonable alternatives" is not necessary.

1.7 In particular, the Council's proposed draft Main Modifications seek to expedite development on two sites at Colebrook, Cullompton (Policy CU21) and at Higher Town, Sampford Peverell (Policy SP2). These two sites, have previously been assessed in the Council's Sustainability Appraisal for the Mid Devon Local Plan Review 2013 - 2033. The proposed draft Main Modifications affecting these two sites do not result in environmental or other effects that are of significance in relation to the objectives of the Sustainability Appraisal. However,

[1] The Procedure Guide for Local Plan Examinations (June 2019) advises at paragraph 6.10 that if MMs are likely to involve the allocation of additional sites that did not appear in the submitted plan, the Inspector may ask the LPA to undertake SA and consultation on the additional sites as a separate process, before the schedule of MMs is agreed. (https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/813316/Procedure_Guide_for_Local_Plan_Examinations_June_2019_-_Final.pdf

some factual updating to the Sustainability Appraisal is needed, particularly to reflect new information provided at the examination hearings from Highways England and Devon County Council in relation road improvements to the A361 and also at Cullompton.

1.8 For completeness, this Sustainability Appraisal report assesses Sustainability Appraisal implications of the suggested options for remedy from the Inspector to maintain a five-year supply of deliverable housing sites that the Council has not proposed as draft Main Modifications to the Plan. These suggested options for remedy that the Council does not propose to make includes bringing forward the contingency site at Tidcombe Hall, Tiverton (TIV13) and extending the site allocation WI1 at Willand. There are no significant implications for the Sustainability Appraisal in terms of not proposing Main Modifications in relation to these two sites.

1.9 It is noted that the Inspector's advice seeks to bring forward *deliverable* sites to boost the delivery of housing in the early years of the Plan, and it does not seek to increase the overall housing requirement for the district. In this specific context, sites that do not have a realistic prospect of yielding completions within five years cannot be considered as reasonable alternatives to the measures proposed.

1.10 In the case of the site at Tidcombe Hall (TIV13), the Council has reason to believe that there may be land assembly issues. Planning permission has been refused for increased housing numbers at Willand (WI1), which is currently the subject of a planning appeal (19/000019/WR). Larger urban extensions, or additions to allocated urban extensions, are not considered by the Council to be deliverable in five years.

2.0 Proposed Draft Main Modifications

2.1 The Inspector's post hearings advice note identifies where Main Modifications are necessary or will be required to the Mid Devon Local Plan Review 2013 – 2033 that is under examination. The Council is currently preparing its response to this advice note on matters the Inspector has identified in addition to the housing trajectory. Reference numbers given to proposed draft Main Modifications referred to in this Sustainability Appraisal Report reflect the Council's preparatory work.

2.2 All proposed draft Main Modifications and a further Sustainability Appraisal update will be subject to a future public consultation.

Sustainability Appraisal (SA) of the implications of the Council's proposed draft Main Modifications in relation to the housing trajectory and the remedies suggested by the Inspector					
Inspector's suggested remedies to housing land supply	**Proposed draft MM (provisional draft MM reference)**	**Justification**	**Outcome of proposed draft MM**	**SA implications**	**Amendment(s) needed to the SA**
"Bringing forward other allocated sites that are currently restricted in terms of timing with no good reason" SP2 Higher Town, Sampford Peverell	Yes **Draft MM01** – Replace Table 6: Housing forecast 2013 – 2033 **Draft MM41** - Remove tie to the M5 Junction 27 allocation from Policy SP2 **Draft MM42** - Remove need for improvements to A361 form Policy SP2 through the deletion of criterion b) and deletion of paragraph 3.224c	In response to the Inspector's post hearings advice note: "…Given that the Policy SP2 allocation is designed to address part of that overall housing requirement, the tie serves no purpose. Reference to it should be removed." In response to the Inspector's post hearings advice note: "It was clear from the helpful submissions of the Highway Authority, that the limitation on	Bring site allocation SP2 Higher Town, Sampford Peverell forward into years 2018/2019 – 2022/2023 of the Table 6: Housing forecast 2013 - 2033 The proposed commencement and build out for the Higher Town site has therefore been amended to take account of the removal of any restriction on the timing of its delivery and align with the HELAA market conditions model assumptions. The	The site allocation SP2 Higher Town, Sampford Peverell has previously been assessed through the SA Update 2017, Document SD03 (pp144-146 and pp 309-312). These are consolidated into the SA Update 2018 (incorporating proposed amendments) - Document SA-02 (pages 201-203 and 366–369). The assessment scoring for the site allocation SP2 Higher Town, Sampford Peverell against the Sustainability	Modify SA Update 2018: SA-02 P52. Amend text as follows: "The Highway Authority ~~has~~ previously advised that any development of the site should be phased until after improved access to the A361. However it has subsequently advised that development of the site at Higher Town is not dependent upon improved access works to the A361." Amend text at pp368-9 i) Delivering the necessary infrastructure as follows: p368-9 "The Highway Authority ~~has~~ previously advised that any development of the site should only commence once Improvements to the A361 junction at Sampford Peverell have been implemented. It has subsequently advised that these junction improvements are not necessary in order for the development to proceed. There is a footpath…."

		development until the completion of improved access works to the A361 is unnecessary. Criterion b) needs to be removed." This site is currently subject to an outline planning application for 60 dwellings (17/01359/MOUT).	site is therefore anticipated to fully built out within the initial five year period rather than commencing delivery in 2022/23. This results in 60 dwellings in the five year supply for 2018/19 – 2022/23, a net increase of 48 compared with the position set out in the January 2019 HLS update (Hearing statement MH-MDDC-1-5).	objectives is not affected through proposed draft main modifications MM01, MM41 and MM42 However, amendments will be necessary to SA02 SA Update 2018 (incorporating proposed amendments) at pages 368 and 369 to reflect that Devon County Council has advised that the limitation on development until the completion of improved access works to the A361 is unnecessary.	Amend mitigation column at PP368/9 "Improvement of the site access would improve visibility. ~~Policy requires no development until the completion of improved access works to the A361.~~ Overall a neutral effect is considered." P369.Secondary/Cumulative/synergistic effects. Amend text as follows: "The cumulative impacts of the development of this site may have an impact on traffic. ~~The policy requires no development until the completion of improved access works to the A361 to ensure the cumulative effect on the A361 is mitigated for~~. <u>However, DCC as the Highway Authority has advised that development of the site at Higher Town can come forward without access improvements to the A361."</u>
"Bringing forward the contingency sites" CU21 Colebrook, Cullompton	Yes **Draft MM01** – Replace Table 6: Housing forecast 2013 – 2033 **Draft MM34** - Remove contingency	Devon County Council's Hearing Statement, has recommended that the supporting paragraph (3.149) to Policy CU21 be amended to include additional text	Bring site allocation CU21 Colebrook forward into years 2018/2019 – 2022/2023 of the Table 6: Housing forecast 2013 – 2033	The contingency site CU21 Colebrook, Cullompton has previously been assessed through the SA (pages 298 – 302 of the SA 2015 SD04b Appendix 2 (Part 1 Strategic Policies and	Modify 2015 SD04b Appendix 2 (Part 1 Strategic Policies and Town Allocations) at pages 298 to 302: P298. Amend title: "Policy CU21 Land at Colebrook (<u>Former</u> Contingency <u>site</u>)" P301. Amend I) Delivering the

	status	(italicised) after the words "Site commencement will also need to be deferred until after the completion of the through route linking Willand Road to Tiverton Road, which is being provided as part of the North West Cullompton allocation *unless satisfactory evidence or mitigation to address air quality and highway capacity can be sustained*". Devon County Council has advised in its hearing statement that 100 dwellings at Colebrook can come forward without the Town Centre Relief Road (TCRR) This site is currently subject to an outline	The proposed build out for the Colebrook allocation follows HELAA market conditions model assumptions. This results in an additional 62 dwellings in the supply for the years 2018/2019 – 2022/2023	Town Allocations). A more extensive site comprising 400 dwellings was considered but rejected at PP147-9 of the 2018 Update (SA-02). The 2015 SA assessment scoring for the contingency site at CU21 Colebrook, Cullompton against the Sustainability objectives is not affected through proposed draft Main Modifications MM01 and MM34 However, amendments will be necessary to SA 2015 SD04b Appendix 2 (Part 1 Strategic Policies and Town Allocations) at pages 298 to 302 to reflect that the contingency status of the site has been removed following advice provided by Devon	necessary infrastructure 'Commentary': "The width of Colebrook Lane from Swallow Way may present difficulties with access and would need to be substantially upgraded. Development in this location would increase traffic on Tiverton Road~~, so would not be permissible until a new road linking Tiverton Road to Willand Road has been provided under Policy CU1~~. However, DCC has indicated that 100 dwellings can come forward without the Town Centre Relief Road. ~~The requirements for a transport assessment is an uncertain effect.~~ A planning application will need to be supported by a transport assessment demonstrating that highway impact is acceptable." P301. Amend I) Delivering the necessary infrastructure 'Mitigation': "Criteria within the policy seeks provision of two points of access from Siskins Close. ~~Further mitigation criteria within the policy state that no development should occur until the Town Centre Relief Road has been provided.~~ Given the mitigation measures set out in criteria within the

		planning application (19/00118/MOUT) for 105 dwellings.		County Council that the site is not dependent upon significant additional highways infrastructure. The text at 'temporary / permanent effects: Timescale…' will need to be updated through the deletion of reference to the need for the Town Centre Relief Road to be completed before the development of the site at CU21 Colebrook.	policy ~~and the fact that infrastructure would need to be in place prior to development beginning~~ and revised advice from DCC about the Town Centre Relief Road, an overall neutral impact has been assumed. Page301 I) Delivering the necessary infrastructure –'Mitigation'. Add to end of section: "Policy S8 also provides mitigation by setting out that developers will be expected to contribute to, or bear the full cost of, new or improved infrastructure and facilities; overall a neutral effect is considered. Because s106 contributions will be sought towards increasing education capacity, removing the contingency site status from Colebrook to bring development forward is not considered to materially change the SA scoring." P302 'Temporary/permanent effects'. Amend the text: "Within the short term, construction traffic associated with the development will contribute towards traffic increase in the town. ~~However, as the site could only come forward once the Town Centre Relief Road is in place,~~

					~~development is only likely to take place in the medium-long term.~~ Once completed the development will be permanent."
"Bringing forward the contingency sites" TIV13 Tidcombe Hall, Tiverton	No	No new evidence or advice has been provided by participants at the examination hearings in relation to this contingency site as part of their submissions made for the examination hearings The Council's HLS update June 2019 can demonstrate that a five year supply of deliverable sites will be maintained over the initial five years and subsequent periods with the proposed draft Main Modifications, without the need to bring forward the TIV13 Tidcombe Hall contingency site	Retain the contingency status of TIV13 Tidcombe Hall to provide flexibility within the Local Plan Review	The contingency site TIV13 Tidcombe Hall has previously been assessed through the SA (pages 222 – 226 of the SA 2015 SD04b Appendix 2 (Part 1 Strategic Policies and Town Allocations) and P116-9 and 289-293 of the 2018 Update (SA-02) No amendment is needed to the SA	N/A

CU7 – 12 Cullompton East	Yes **Draft MM01** – Replace Table 6: Housing forecast 2013 – 2033	Advice has been provided to the examination hearings in the Statement of Common Ground between Mid Devon District Council, Devon County Council and Highways England (SCG10). This makes clear that based on technical modelling reports provided (in Devon County Council's hearing statement), Devon County Council and Highways England conclude the first 500 dwellings at East Cullompton (part of CU7 – CU12 Cullompton East) require the delivery of the proposed Town Centre Relief Road (TCRR) A planning application for the TCRR is expected in autumn	The amended trajectory for the East Cullompton allocation sees completions from the initial phase beginning in 2023/24. This is outside the initial five year period so it is not anticipated that the East Cullompton allocation will contribute to the initial five year housing land supply	Policies CU7 -12 Cullompton East have previously been assessed through the SA (pages 264 – 271 of the SA 2015 SD04b Appendix 2 (Part 1 Strategic Policies and Town Allocations) No amendment is needed to the SA	N/A

		2019. The Council is currently working on the precautionary assumption, for Local Plan Review housing trajectory purposes, that the TCRR will be delivered by the very latest in 2023			
"Extending existing allocations to accommodate more dwellings (the policy WI1 Willand for example)"	No	The Council's HLS update June 2019 can demonstrate that a five year supply of deliverable sites will be maintained over the initial five years and subsequent periods with the proposed draft Main Modifications, without the need to extend existing allocations to accommodate more dwellings	Not applicable	There are no SA implications since no draft Main Modifications are proposed to extend existing allocations. Willand has been considered as part of the SA process (p385 of the January 2018 SA Update (SA-02) Planning application reference 18/00175/MOUT was refused on 9th October 2018 for 125 dwellings at Meadow Park, Silver Street, Willand as being out of scale and size to the settlement and	N/A

				available facilities in the settlement. It is therefore inconsistent with the Local Plan's strategy for the distribution of development. It is noted that this application is currently the subject of appeal. Pending the outcome of the appeal, the site is not a reasonable alternative.	
"Increasing densities to allow for more dwellings on allocated sites that are less constrained"	No	The Council's HLS update June 2019 can demonstrate that a five year supply of deliverable sites will be maintained over the initial five years and subsequent periods with the proposed draft Main Modifications, without the need to increase densities for more dwellings on allocated sites that are less constrained	Not applicable	There are no SA implications since no draft Main Modifications are proposed to increase densities on allocated sites that are less constrained It would be difficult to assess the overall impact of increased densities at Plan level, as the impact will be different on a site to site basis. Seeking a blanket increase across	N/A

		Site allocation densities have been assessed at an average of 30-50 dwellings per hectare for the net developable area, allowing for internal roads, landscaping . Strategic urban extensions have been subject to masterplanning that has provided a more detailed assessment of potential development capacity. Higher density ranges were considered in urban areas (see pp5-6 of the Exeter HMA SHLAA Methodology HOU01a). The most appropriate density within these ranges is considered on a site by site basis (see HOU01b-h)		the Plan could not rule out harmful impacts. Density is probably more appropriately considered on a site by site basis at planning application stage.	

		Eventual densities achieved will be dependent on detailed planning proposals stage			
"Allocating a new, large site not constrained by the link road (or motorway junctions) that can come on stream quickly and bolster supply in the early years of the Plan while infrastructure is provided elsewhere"	No	The Council's HLS update June 2019 can demonstrate that a five year supply of deliverable sites will be maintained over the initial five years and subsequent periods with the proposed draft Main Modifications, without the need to allocate a new, large site Large sites are unlikely to contribute to the housing land supply in the first five years of the Plan due to the need for infrastructure provision, site preparation. They would also need	Not applicable	There are no SA implications since no draft Main Modifications are proposed to allocate a new, large site	N/A

		masterplanning and potential land assembly. Reasonable alternative site options have previously been assessed through the preparation of the Local Plan Review and tested through the Sustainability Appraisal

Introduction

1.1 In March 2017, Mid Devon District Council submitted the Mid Devon Local Plan Review for independent examination by a Planning Inspector appointed by the Secretary of State. An integrated Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA) Report relating to the Proposed Submission Consultation version of the Local Plan Review (February 2015[1]) was submitted alongside the Plan, along with an SA Update document (January 2017)[2], which Mid Devon District Council had prepared to take into account comments made during the 2015 Proposed Submission consultation and the proposed modifications to the Local Plan Review.

1.2 In January 2018, LUC prepared an independent review[3] of Mid Devon District Council's SA Update (2017) and as a result of that review the Council undertook some further work on the SA Update and published a revised version in January 2018[4].

1.3 Preliminary public examination hearings were held in September 2018, followed by the main hearings which took place between 14th and 20th February 2019. Following the hearings the Inspector issued a post-hearing advice note (Examination document ID12[5]) in May 2019.

1.4 In that note the Inspector suggested a number of potential remedies to maintain a five-year supply of deliverable housing sites. The Council then prepared a document entitled 'Sustainability Appraisal of the implications of the Council's proposed draft Main Modifications in relation to the housing trajectory and the remedies suggested by the Inspector' (Examination document ED21[6]). That document (ED21) set out some proposed Main Modifications based on the Inspector's suggested remedies for the housing supply issue and considered their SA implications.

1.5 Mid Devon District Council has now prepared a full Schedule of Proposed Main Modifications to the Local Plan Review which will be published for a six-week consultation period in early 2020. The proposed modifications take into account matters raised during the examination by the Inspector and participating representors. These include modifications relating to the housing supply which were previously considered in document ED21. A number of the other proposed modifications had been previously published in the March 2017 schedule of Proposed Minor Modifications which was submitted with the Local Plan Review (see document SD14[7]). On the advice of the Inspector, some of these have now been reclassified as Main Modifications and so are included in the current schedule which this SA Addendum relates to.

1.6 This SA Addendum presents an appraisal of the Proposed Main Modifications and considers their implications for the SA findings reported previously. In relation to the housing supply issue, it builds on and supersedes the appraisal work previously presented in document ED21. In combination with the SA Report that was submitted alongside the Local Plan Review for examination and the SA Update, this SA Addendum represents an appraisal of the Local Plan Review as proposed to be modified, updating the findings presented in the February 2015 SA Report and the January 2018 SA Update. It should be noted that this is an addendum to those SA documents and that they should therefore be read together.

1.7 This SA Addendum focusses on the 'Main Modifications' to the Local Plan Review only. Additional Modifications have also been prepared to address non-substantive matters such as typographical,

factual and grammatical errors. These additional modifications are not subject to SA as they do not have the potential to lead to significant sustainability effects.

Sustainability Appraisal and Strategic Environmental Assessment

1.8 The purpose of Sustainability Appraisal is to promote sustainable development by integrating sustainability considerations into the preparation and adoption of plans. Sustainability Appraisal (SA) is a statutory requirement of the Planning and Compulsory Purchase Act 2004. It is designed to ensure that the Plan-making process maximises the contribution that a plan makes to sustainable development and minimises any potential adverse impacts. The SA process appraises the likely social, environmental and economic effects of the strategies and policies within a Development Plan Document (DPD) - in this case the Mid Devon Local Plan Review - from the outset of its development.

1.9 Strategic Environmental Assessment (SEA) is also a statutory assessment process, required under the SEA Directive[8], transposed in the UK by the SEA Regulations[9] . The SEA Regulations require the formal assessment of plans and programmes which are likely to have significant effects on the environment, and set the framework for future consent of projects requiring Environmental Impact Assessment (EIA)[10]. The purpose of SEA, as defined in Article 1 of the SEA Directive is '*to provide for a high level of protection of the environment and to contribute to the integration of environmental considerations into the preparation and adoption of plans….with a view to promoting sustainable development*'.

1.10 SEA and SA are separate processes but have similar aims and objectives. Simply put, SEA focuses only on the likely environmental effects of a plan whilst SA includes a wider range of sustainability considerations, extending to social and economic impacts. The Government's Sustainability Appraisal guidance[11] outlines how it is possible to satisfy both requirements by undertaking a joint SA/SEA process, and to present an SA report that incorporates the requirements of the SEA Regulations. This integrated approach has been taken to the SA/SEA of the Mid Devon Local Plan Review and throughout the SA documents, the term 'SA' should be taken to mean 'SA incorporating the requirements of the SEA Regulations'.

1.11 Details about how the SA process has informed the preparation of the Local Plan Review at each stage can be found in the February 2015 SA Report which accompanied the examined Local Plan Review and in the January 2018 SA Update.

Reasonable Alternatives and reasons for selecting the proposed Main Modifications

1.12 The February 2015 SA Report which accompanied the examined Local Plan Review, along with the January 2018 Update document, set out how reasonable alternatives were considered and selected as part of the SA and plan-making processes up until Submission, as required by the Environmental Assessment of Plans and Programmes Regulations (2004).

Alternative options for maintaining the housing supply

1.13 As described above, following the Examination hearings the Inspector issued a post hearing advice note (Examination document ID12) in which he proposed four alternative options for maintaining a five-year supply of deliverable housing sites, as follows:

1 Bringing forward other allocated sites that are currently restricted in terms of timing with no good reason, the Policy SP2 site for example.

[8] SEA Directive 2001/42/EC

[9] Statutory Instrument 2004, No 1633

[10] Under EU Directives 85/337/EEC and 97/11/EC concerning EIA.

[11] DCLG (2014) Planning Practice Guidance. Available at: http://planningguidance.planningportal.gov.uk/blog/guidance/strategic-environmental-assessment-and-sustainability-appraisal/strategic-environmental-assessment-and-sustainability-appraisal-and-how-does-it-relate-to-strategic-environmental-assessment/

2 Bringing forward the contingency sites.

3 Extending existing allocations to accommodate more dwellings (the Policy WI1 site for example) or increasing densities to allow for more dwellings on allocated sites that are less constrained.

4 Allocating a new, large site not constrained by the link road (or motorway junctions) that can come on stream quickly and bolster supply in the early years of the Plan while infrastructure is provided elsewhere.

1.14 Mid Devon District Council identified some proposed draft Main Modifications based on its preferred options from these suggested remedies and prepared an SA document relating to these proposed modifications (document ED21) in July 2019. The Council's preferred approach involved:

- Bringing forward the delivery of the allocated site SP2 (Higher Town, Sampford Peverell) which was restricted in the submitted Local Plan Review in terms of timing. As detailed in **Table 1** this delay is no longer necessary.
- Bringing forward the delivery of the site at Colebrook, Cullompton (policy CU21) and removing its contingency status.
- Bringing forward the delivery of the allocated Cullompton East site (policies CU7-12).

1.15 For completeness, the Council's July 2019 SA document (ED21) also sought to assess the SA implications of the Inspector's four suggested options that were not proposed as draft modifications at the time, i.e. the options that the Council had rejected.

1.16 LUC has reviewed the July 2019 SA document as part of the preparation of this SA Addendum and it has been concluded that some supplementary work on the SA of the Inspector's options is required, in order to ensure that the appraisal adequately considers the likely significant sustainability effects of each option were it to be taken forward. In document ED21, the sustainability implications of implementing the preferred options were described, but the implications of the rejected options were only considered in terms of the likely effects of rejecting the options, i.e. that there would not be any sustainability implications. The likely significant sustainability effects of taking those options forward, had they not been rejected, were not clearly described.

1.17 Therefore, **Table 1** below presents a summary of the SA implications of each of the Inspector's four suggested remedies, including variations within them:

- 1. Bringing forward other allocated sites that are currently restricted in terms of timing with no good reason: SP2 Higher Town, Sampford Peverell.
- 2. Bringing forward the contingency site: CU21 Colebrook, Cullompton.
- 2. Bringing forward the contingency sites: TIV13 Tidcombe Hall, Tiverton.
- 2. Bringing forward the contingency site: CU7–12 Cullompton East.
- 3. Extending existing allocations to accommodate more dwellings (the policy WI1 Willand for example).
- 3. Increasing densities to allow for more dwellings on allocated sites that are less constrained.
- 4. Allocating a new, large site not constrained by the link road (or motorway junctions) that can come on stream quickly and bolster supply in the early years of the Plan while infrastructure is provided elsewhere.

1.18 **Table 1** builds on the appraisal work set out in ED21, expanding and revising it where appropriate. There is some uncertainty around whether all of these options are in fact 'reasonable' for the purposes of SA; however, in line with the precautionary approach all have been considered in terms of their SA implications.

1.19 The Council's proposed modifications relating to the housing supply are now included in the complete schedule of Proposed Main Modifications to the Local Plan Review (see **Table 2** further ahead in this document), and their implications for the SA findings reported previously (in the

February 2015 SA Report and in the January 2018 SA Update) are also detailed there along with those of the other Proposed Main Modifications.

1.20 No further reasonable alternatives to the Proposed Main Modifications have been identified, given that reasonable alternatives were appraised up to the submission of the Local Plan, and that preparation of the Proposed Main Modifications was led by the Inspector. Where the Inspector identified alternative options, these have been appraised in document ED21 and in **Table 1** below.

Table 1: SA of the Inspector's alternative remedies for maintaining a five-year supply of deliverable housing sites

Inspector's suggested remedies to housing land supply	SA implications	Included as a Proposed Main Modification?	Mid Devon District Council's reasons for decision making
1. Bringing forward other allocated sites that are currently restricted in terms of timing with no good reason: SP2 Higher Town, Sampford Peverell	The site allocation SP2 Higher Town, Sampford Peverell has previously been assessed in the SA Update 2017 (Document SD03 pp144-146 and pp 309-312). See also the SA Update 2018 (incorporating proposed amendments) - Document SA-02 (pages 201-203 and 366–369). The likely effects of this site on the SA objectives are not affected by the proposal to bring forward its delivery. However, bringing forward the delivery of the site would mean that the effects previously identified would occur earlier in the Plan period. As this option has been taken forward into the Proposed Main Modifications, the SA implications of this proposed modification are considered further in **Table 2** (see MM01, MM42 and MM43).	Yes (see MM01, MM42 and MM43 in **Table 2**)	In response to the Inspector's post hearings advice note: "…Given that the Policy SP2 allocation is designed to address part of that overall housing requirement, the tie serves no purpose. Reference to it should be removed." In response to the Inspector's post hearings advice note: "It was clear from the helpful submissions of the Highway Authority, that the limitation on development until the completion of improved access works to the A361 is unnecessary. Criterion b) needs to be removed." At the time of decision making, this site was subject to an outline planning application for 60 dwellings (17/01359/MOUT).
2. Bringing forward the contingency site: CU21 Colebrook, Cullompton	The contingency site CU21 Colebrook, Cullompton has previously been assessed through the SA (see pages 298 – 302 of the SA 2015 SD04b Appendix 2 (Part 1 Strategic Policies and Town Allocations). A more extensive site comprising 400 dwellings was considered but rejected at pp147-9 of the 2018 Update (SA-02). The likely effects of this site on the SA objectives are not affected by the proposal to bring forward its delivery and remove its contingency status. However, bringing	Yes (see MM01 and MM35 in **Table 2**)	Devon County Council's Hearing Statement has recommended that the supporting paragraph (3.149) to Policy CU21 be amended to include additional text (italicised) after the words "Site commencement will also need to be deferred until after the completion of the through route linking Willand Road to Tiverton Road, which is being provided

Inspector's suggested remedies to housing land supply	SA implications	Included as a Proposed Main Modification?	Mid Devon District Council's reasons for decision making
	forward the delivery of the site would mean that the effects previously identified would occur earlier in the Plan period and the removal of the contingency status means that the effects are more certain to occur. As this option has been taken forward into the Proposed Main Modifications, the SA implications of the proposed modification are considered further in **Table 2** (see MM01 and MM35).		as part of the North West Cullompton allocation *unless satisfactory evidence or mitigation to address air quality and highway capacity can be sustained*". Devon County Council has advised in its hearing statement that 100 dwellings at Colebrook can come forward without the Town Centre Relief Road (TCRR). At the time of decision making this site was subject to an outline planning application (19/00118/MOUT) for 105 dwellings.
Bringing forward the contingency sites: TIV13 Tidcombe Hall, Tiverton	The contingency site TIV13 Tidcombe Hall has previously been assessed through the SA (pages 222 – 226 of the SA 2015 SD04b Appendix 2 (Part 1 Strategic Policies and Town Allocations) and P116-9 and 289-293 of the 2018 Update (SA02). The likely effects of this site on the SA objectives are not affected by the option of bringing forward its delivery and removing its contingency status. However, bringing forward the delivery of the site would mean that the effects previously identified would occur earlier in the Plan period and the removal of the contingency status would mean that the effects would be more certain to occur. A likely significant positive effect was previously identified in relation to SA objective G (meeting housing needs) and a significant negative effect was previously identified in relation to SA objective D (resource use). As this option has not been included as a Main Modification the likely effects of TIV13 remain as presented in the 2015 SA Report and	No	No new evidence or advice has been provided by participants at the examination hearings in relation to this contingency site as part of their submissions made for the examination hearings. The Council's HLS update June 2019 can demonstrate that a five year supply of deliverable sites will be maintained over the initial five years and subsequent periods with the proposed draft Main Modifications, without the need to bring forward the TIV13 Tidcombe Hall contingency site. It is noted that the Inspector's advice seeks to bring forward *deliverable* sites to boost the delivery of housing in the early years of the Plan, and it does not seek to increase the overall housing

Inspector's suggested remedies to housing land supply	SA implications	Included as a Proposed Main Modification?	Mid Devon District Council's reasons for decision making
	2018 Update.		requirement for the district. In this specific context, sites that do not have a realistic prospect of yielding completions within five years cannot be considered as reasonable alternatives to the measures proposed. In the case of the site at Tidcombe Hall (TIV 13), the Council has reason to believe that there may be land assembly issues.
2. Bringing forward the contingency site: CU7–12 Cullompton East	Policies CU7 -12 Cullompton East have previously been assessed through the SA (pages 264 – 271 of the SA 2015 SD04b Appendix 2 (Part 1 Strategic Policies and Town Allocations). The likely effects of this site on the SA objectives are not affected by the proposal to bring forward its delivery. However, bringing forward the delivery of the site means that the effects previously identified would occur earlier in the Plan period (although not within the initial five years, see next column). As this option has been taken forward into the Proposed Main Modifications, the SA implications of the proposed modification are considered further in **Table 2** (see MM01).	Yes (see MM01 in **Table 2**)	The amended trajectory for the East Cullompton allocation sees completions from the initial phase beginning in 2023/24. This is outside the initial five-year period so it is not anticipated that the East Cullompton allocation will contribute to the initial five year housing land supply. Advice has been provided to the examination hearings in the Statement of Common Ground between Mid Devon District Council, Devon County Council and Highways England (SCG10). This makes clear that based on technical modelling reports provided (in Devon County Council's hearing statement), Devon County Council and Highways England conclude the first 500 dwellings at East Cullompton (part of CU7 – CU12 Cullompton East) require the delivery of the proposed Town Centre Relief Road (TCRR). At the time of decision making, a planning application for the TCRR was

Inspector's suggested remedies to housing land supply	SA implications	Included as a Proposed Main Modification?	Mid Devon District Council's reasons for decision making
			expected to come forward in autumn 2019. The Council is currently working on the precautionary assumption, for Local Plan Review housing trajectory purposes, that the TCRR will be delivered by the very latest in 2023.
3. Extending existing allocations to accommodate more dwellings (the policy WI1 Willand for example).	The Willand site has been considered as part of the SA process (p385 of the January 2018 SA Update (SA-02). The likely sustainability effects of extending existing allocations would depend largely on which allocations are extended and in which direction, as the effects will be determined by factors such as the proximity of the extended development area to areas of high landscape sensitivity or designated biodiversity sites for example. Many of the effects of this approach are therefore uncertain at this stage. However, it is likely that extending the existing allocations would result in more negative effects on SA objectives A (natural environment) and B (historic environment). However, it may be that increasing the size of allocations could stimulate the provision of a wider range of services and facilities and infrastructure, which could result in positive effects on SA objectives H (community health and wellbeing) and I (infrastructure). There may also be positive effects on SA objective C (climate change) if increasing the size of allocations means that it becomes viable to provide more employment land, services and facilities within the sites, enabling them to develop as more self-sufficient communities and reducing the need to drive day-to-day.	No	Planning application reference 18/00175/MOUT was refused on 9th October 2018 for 125 dwellings at Meadow Park, Silver Street, Willand as being out of scale and size to the settlement and available facilities in the settlement. It is therefore inconsistent with the Local Plan's strategy for the distribution of development. It is noted that, at the time of decision making, this application was the subject of appeal. Pending the outcome of the appeal, the site was not a reasonable alternative.

Inspector's suggested remedies to housing land supply	SA implications	Included as a Proposed Main Modification?	Mid Devon District Council's reasons for decision making
3. Increasing densities to allow for more dwellings on allocated sites that are less constrained.	Increasing densities on allocated sites could have positive effects on SA objectives A (natural environment) and D (minimising resource use) as it may be possible to deliver more homes without increasing land take, thereby reducing the loss of greenfield land and the potential impacts on the landscape, biodiversity etc. However, increasing densities may reduce the quality of the housing and the wider built environment within those sites, having negative effects on SA objectives B (built environment) and G (meeting housing needs). There may also be a negative effect on SA objective H (community health and wellbeing) if housing density is increased to the detriment of the overall quality of the living environment within the sites.	No	The Council's HLS update June 2019 can demonstrate that a five-year supply of deliverable sites will be maintained over the initial five years and subsequent periods with the proposed draft Main Modifications, without the need to increase densities for more dwellings on allocated sites that are less constrained. Site allocation densities have been assessed at an average of 30-50 dwellings per hectare for the net developable area, allowing for internal roads, landscaping etc. Strategic urban extensions have been subject to masterplanning that has provided a more detailed assessment of potential development capacity. Higher density ranges were considered in urban areas (see pp5-6 of the Exeter HMA SHLAA Methodology HOU01a). The most appropriate density within these ranges is considered on a site by site basis (see HOU01b-h). Eventual densities achieved will be dependent on detailed planning proposals stage. It is noted that the Inspector's advice seeks to bring forward *deliverable* sites to boost the delivery of housing in the early years of the Plan, and it does not seek to increase the overall housing requirement for the district. In this specific context, sites that do not have a

Inspector's suggested remedies to housing land supply	SA implications	Included as a Proposed Main Modification?	Mid Devon District Council's reasons for decision making
			realistic prospect of yielding completions within five years cannot be considered as reasonable alternatives to the measures proposed. Larger urban extensions, or additions to allocated urban extensions, are not considered by the Council to be deliverable in five years. Seeking a blanket increase across the Plan could not rule out harmful impacts. Density would be more appropriately considered on a site by site basis at planning application stage.
7. Allocating a new, large site not constrained by the link road (or motorway junctions) that can come on stream quickly and bolster supply in the early years of the Plan while infrastructure is provided elsewhere.	The likely sustainability effects of a new large site allocation are largely uncertain at this stage as they would depend on its location and its proximity to sensitive receptors such as biodiversity sites. However, allocating a new large, presumably greenfield site is likely to result in more negative effects on SA objectives A (natural environment) and B (historic environment). However, it may be that providing a new large site allocation could stimulate the provision of a wider range of services and facilities and infrastructure within the site, which could result in positive effects on SA objectives H (community health and wellbeing) and I (infrastructure). There may also be positive effects on SA objective C (climate change) if the larger size of the allocation means that it becomes viable to provide more employment land, services and facilities within the site, enabling it to develop as a more self-sufficient community and reducing the need to drive day-to-day. Finally, allocating a site that is unconstrained in terms of	No	Large sites are unlikely to contribute to the housing land supply in the first five years of the Plan due to the need for infrastructure provision, site preparation. They would also need masterplanning and potential land assembly. Reasonable alternative site options have previously been assessed through the preparation of the Local Plan Review and tested through the Sustainability Appraisal.

Inspector's suggested remedies to housing land supply	SA implications	Included as a Proposed Main Modification?	Mid Devon District Council's reasons for decision making
	the road infrastructure could have a positive effect on SA objective G (meeting housing needs) as this approach would mean the housing is more likely to be able to be delivered within the early years of the Plan.		

Appraisal Process

Sustainability Objectives

1.21 Each policy and site allocation has been assessed against a framework of SA objectives throughout the preparation of the Local Plan Review. Development of an SA framework is not a requirement of the SEA Regulations; however it provides a recognised way in which the likely sustainability effects of a plan can be predicted, described, analysed and compared in a consistent way. The SA framework sets out a series of sustainability objectives and associated questions which can be used to 'interrogate' options and policies drafted during the plan-making process. These SA objectives define the long-term aspirations of the District with regard to social, economic and environmental considerations. During the SA, the performance of the plan options (and later, policies) are assessed against these SA objectives and appraisal questions.

1.22 Mid Devon's SA framework is presented in **Appendix 1** and covers all of the topics required in the SEA Regulations. The same SA framework that was used to appraise previous iterations of the Local Plan Review has been used in the appraisal of the Proposed Main Modifications.

1.23 Throughout the SA process, judgements and symbols showing the likely effect that each element of the Local Plan Review would have on each SA objective have been presented in matrices. **Figure 1** below sets out the symbols used to illustrate each type of effect.

Figure 1 Key to symbols and colour coding used in the SA of the Mid Devon Local Plan Review

+3	The policy/proposal will have a significant positive contribution towards achieving the objective.
+2	The policy/proposal will have a positive impact in contributing towards achieving the objective.
+1	The policy/proposal will have a minor positive impact in contributing towards achieving the objective.
0	The policy/proposal will have no impact or will have some positive and some negative impacts thereby having a balanced effect in contributing towards achieving the objective.
-1	The policy/proposal will have a minor negative impact in contributing towards achieving the objective.
-2	The policy/proposal will have a negative impact in contributing towards achieving the objective.
-3	The policy/proposal will have a significant negative contribution towards achieving the objective.

1.24 **Appendix 2** presents an update to the baseline information and review of plans, policies and programmes that was previously set out in the February 2015 SA Report.

SA conclusions for the examined Local Plan Review

SA Report for the Proposed Submission Consultation Local Plan Review (February 2015)

1.25 The policies and site allocations in the Local Plan Review and the reasonable alternatives considered during its preparation were subject to a detailed appraisal against the SA objectives which were developed at the scoping stage of the SA process. It was concluded that the SA has played an integral role in the development of the Local Plan Review. It has been used to consider

the various strategic options and inform the most sustainable approach for the District. The SA has led to the refinement of policies to minimise adverse impacts and has ensured that sustainability issues for the District are addressed. The wording of the specific site policies seeks to ensure that potential negative effects resulting from the development of sites are addressed at masterplanning and/or planning application stage.

1.26 In general, the emerging Local Plan Review was found to have a wide range of positive and significant positive effects on the objectives, both cumulatively and through individual policies, although a number of potentially adverse impacts still remain. Recommendations made in previous iterations of the SA report and the proposed submission SA report have generally been thoroughly addressed, which has provided mitigation for potential adverse effects for both individual policies/proposals and the Local Plan Review as a whole.

SA Update (January 2018)

1.27 The SA Update document (originally published in January 2017 and updated in January 2018) was prepared to take into account comments made during the 2015 Proposed Submission consultation and some proposed modifications to the Local Plan Review. The SA Update document considered additional reasonable alternatives and new information. The majority of proposed changes comprised minor amendments to the policies or supporting text, although more significant amendments to the Plan included the proposed allocation of land at Junction 27 of the M5 and associated housing, as well as an amended housing total to reflect up-to-date evidence on housing needs. The allocation of land at the M5 was found to have broadly positive impacts because it will promote economic growth and employment and because controls are set out to ensure the necessary infrastructure is in place and the resulting housing need is met. While potential negative effects were identified in relation to SA objectives A (natural environment), C (climate change) and D (resource use), these were not found to be significant.

1.28 Recommendations made in previous iterations of the SA report and in the SA Update, as well as controls through policy, have provided mitigation for potential adverse effects. Of the main changes proposed in this iteration of the SA, the main negative impact on the Local Plan Review as a whole was from the deletion of a contingency site (Wynnards Mead, Tiverton). The deletion of this policy reduced the flexibility of the Plan as a whole, given the role of contingency sites in ensuring housing delivery during the Plan period. However, on balance, the sustainability issues of the site were found by the Council to outweigh the benefit of the inclusion of the contingency site. Two other contingency sites in the plan remained and therefore flexibility was still found to remain in the Plan. The other changes to the Plan were considered largely beneficial.

Appraisal of the Main Modifications

1.29 **Table 2** overleaf presents the schedule of Proposed Main Modifications and the Council's reasons for proposing each change, with a final column added to record the implications of each Main Modification for the SA conclusions reported previously. The SA implications have been considered based on whether each Main Modification changes the conclusions of the February 2015 SA Report for the Proposed Submission Consultation version of the Local Plan Review, as updated in the January 2018 SA Update where relevant.

Table 2: Assessment of proposed Main Modifications in relation to the SA conclusions reported previously

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
MM01	Overall Provision of housing and employment	26-27	Replace Table 6: Housing forecast 2013 – 2033 with the following update:	To update the housing trajectory following the Inspector's post hearings advice note. A detailed explanation of the replacement Table 6: Housing Forecast 2013 – 2033 is provided in the Council's "Housing Land Supply Update – Addendum to January 2019 update in response to the Inspector's Post Hearings Advice Note (June 2019)" which is appended to this schedule of Proposed Main Modifications.	**No change to SA findings:** This proposed modification comprises an updated housing forecast table which provides context for Policy S2 and certain site allocations policies, proposed modifications to which are considered separately below.
MM02	S1: Sustainable		Amend criterion i) as follows:	Taken from Submission Document SD14.	**No change to SA findings:** The

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
	Development Priorities		"…recreational trails, ~~**and**~~ accessible land, **and other green infrastructure,** and opportunities…."	Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed to reflect representation made by Natural England during the 2017 modifications consultation.	additional wording relating to green infrastructure reinforces the already significant positive (+3) effects identified in relation to SA objectives A (natural environment), B (built environment), C (climate change) and H (health and wellbeing) for policy S1.
MM03	S2: Amount and Distribution of Development	32	"The diverse needs of the community will be met through the provision of **a minimum of** ~~**approximately**~~ 7,860 ~~7,200~~ dwellings and 147,000 ~~154,000~~ square metres of commercial floorspace between 1st April 2013 and 31st March 2033."	In response to the Inspector's post hearings advice note: "…content that the OAN figure of 78 (393pa) is soundly derived, as is the extent of commercial development envisaged. That said, while I appreciated the headroom allowed for, to comply with the (2012 version of) the Framework, these figures must be expressed as a minima in Policy S2."	**No change to SA findings:** The presentation of the total housing figure for the Local Plan Review as a minimum rather than as an approximate figure is not expected to have a significant effect on the eventual number of homes to be provided. The already significant positive (+3) effect identified for this policy in relation to SA objective G (meeting housing needs) is unchanged.
MM04	S3: Meeting Housing Needs	34	Amend criterion a) as follows: "The diverse needs of Mid Devon will be met through the provision of **a minimum of** ~~**approximately**~~ 7,860 ~~7,200~~ dwellings between 1st April 2013 and 31st March 2033."	In response to the Inspector's advice note: "…content that the OAN figure of 78 (393pa) is soundly derived, as is the extent of commercial development envisaged. That said, while I appreciated the headroom allowed for, to comply with the (2012 version of) the Framework, these figures must be expressed as a minima in Policy S2"	**No change to SA findings:** The presentation of the total housing figure for the Local Plan Review as a minimum rather than as an approximate figure is not expected to have a significant effect on the eventual number of homes to be provided. The already significant positive (+3) effect identified for this policy in relation to SA objective G (meeting housing needs) is unchanged.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
MM05	2.31	36	Amend paragraph 2.31 of the supporting text as follows: "….The need for gypsy and traveller pitches will be accommodated by pitches within larger housing sites, for example at Tiverton Eastern Urban Extension, North West Cullompton, East Cullompton and Pedlerspool in Crediton. **The Council's preferred approach is for on-site provision as part of larger housing proposals TIV1, CU1, CU7 and CRE5. Provision off-site will only be accepted where it is demonstrated that provision on a different site would achieve a more favourable outcome for Gypsies and Travellers as described in Policy DM7. Where such a more favourable outcome can be demonstrated, off-site provision must meet the requirements of Policy DM7, and a mechanism must be put in place to ensure that the pitches are delivered. This will usually be through a s106 agreement requiring the developer to identify and obtain planning permission (which will not be unreasonably withheld by the Council) for the required number and standard of pitches. The pitches will be provided by the development itself or where the land is transferred for a nominal value, by an agreed third party Registered Provider or other agreed private provider, for the sole purpose of occupation and ancillary business by**	In response to the Inspector's post hearings advice note and to ensure consistency with MM proposed for Policy DM7.	**No change to SA findings:** The proposed amendment to the supporting text of policy S3 reflects the proposed changes to the wording of policy DM7, which are considered separately below in terms of their implications for the SA findings.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
Page 1896			**Gypsies and Travellers. The off-site provision of pitches must be provided and made available for occupation before the occupation of a specified proportion of the provision of on-site open market dwellings as part of the larger housing proposal at TIV1, CU1, CU7 or CRE5. Where the off-site provision of pitches generates additional infrastructure needs, developers of the larger housing proposal at TIV1, CU1, CU7 or CRE5 will be expected to contribute fairly towards the cost in accordance with Policies S8 and DM7 of this Plan.** ~~**The Council is working with the travelling showpeople community to approve a large site near Cullompton which would meet the need requirements set out in the GTAA. Policy DM7 (gypsy and traveller accommodation) manages the development of specific sites"**~~		
MM06	S8: Infrastructure	46	Modification to include following text at the end of the policy text: **"Planning permission will be granted only where the impact of development is not considered to be severe. Where severe impacts that are attributable to the development are considered likely, including as a consequence of cumulative impacts, they must be subject to satisfactory mitigation having regard to the latest**	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the policy text does not affect the overall meaning of policy S8, and does not affect the significant positive (+3) effect that has already been identified in relation to SA objective I (infrastructure). While the proposed additional text could provide some additional mitigation for any negative effects from infrastructure development that may arise in

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			infrastructure plan".		relation to SA objectives A (natural environment) and B (built environment), this is not considered to affect the minor negative (-1) and negligible (0) effects already identified for these objectives respectively.
MM07	S9: Environment	48	Amend criterion e) as follows: "The preservation and enhancement of the distinctive qualities of Mid Devon's natural landscape, supporting opportunities identified within the landscape character areas. Within **~~or adjoining~~** the Blackdown Hills Area of Outstanding Natural Beauty, **and within the setting of the Blackdown Hills Area of Outstanding Natural Beauty**, and Exmoor and Dartmoor National Parks, the primary objective will be to protect the special ~~environmental~~ qualities of that landscape and its setting."	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed in response to the representation made by Natural England during the 2017 modifications consultation.	**No change to SA findings:** The additional policy wording relating to protected landscapes reinforces the significant positive (+3) effect already identified in relation to SA objective A (natural environment) for policy S9.
MM08	S9: Environment	48	Amend criterion f) as follows: "The protection and enhancement of designated sites of international, national and local biodiversity and geodiversity importance. On both designated and undesignated sites, development will support opportunities for protecting and enhancing species populations and linking habitats. **If significant harm resulting from development cannot be avoided ~~providing~~ impacts should be adequately**	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed in response to the representation made by Natural England during the 2017 modifications consultation and to reflect the hierarchy in NPPF para 118.	**No change to SA findings:** The proposed amendments to the wording of the policy criterion do not affect the overall meaning of policy S9. While the proposed change provides stronger mitigation in relation to the protection and enhancement of designated biodiversity sites, a significant positive (+3) effect on SA objective A (natural environment) has already been identified for this policy.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			mitigated ~~**mitigation and .**~~ Compensation measures **will only be considered** where appropriate **as a last resort;** and"		
MM09	S11: Cullompton	52	Amend criterion a) as follows: "Make any necessary ~~**improvements to the M5 motorway including junction 28**~~ **strategic mitigations** to maintain highway capacity**,** ~~**and**~~ safety**, integrity, and sustainability including the M5 and local highway network in conjunction with current and relevant infrastructure plans;**"	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the overall meaning of policy S11 or its likely effects on the SA objectives.
MM10	S12: Crediton	55	Add to the end of clause e) "~~.~~ , **including green infrastructure"**	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed in response to the representation made by Natural England during the 2017 modifications consultation.	**No change to SA findings:** The additional reference to green infrastructure will strengthen the mitigation which has already been identified to reduce the original significant negative (-3) effect on SA objective A (natural environment) to minor negative (-1).
MM11	S14: Countryside and paragraph 2.82	59	Amend criterion a) as follows: "a) Affordable and low cost housing to meet local needs, **gypsy and traveller accommodation,** ~~gypsy and traveller accommodation,~~ residential conversion of appropriate existing buildings…" Amend the last two sentences of supporting text in para 2.82 as follows: "National policy requires that new sites for	In response to the Inspector's post hearing advice note: "Make Policy S14 permissive of G&T sites in the countryside while decoupling allocated G&T sites from general housing allocations and deleting the stipulation in relation to need in Policy DM7"	**No change to SA findings:** The proposed modification to policy S14 could mean that Gypsy and Traveller sites are more likely to come forward in the countryside; however the policy already sets out criteria against which all proposals in the countryside will be assessed, and which should help to ensure that they are appropriate and do not have negative sustainability effects, i.e. as a result

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			travellers should be ~~**very strictly**~~ limited in open countryside that is away from existing settlements or outside areas allocated in the development plan. In certain circumstances the development of such sites outside of settlement limits will be appropriate, providing it can meet the criteria set out within Policy DM7 (gypsy and traveller accommodation)**.**"		of adverse impacts on biodiversity, the landscape or cultural heritage. It is also noted that policy DM7 sets out criteria against which proposals for Gypsy and Traveller sites will be assessed and the implications of proposed modifications to that policy are considered separately below (see MM48). The number of Gypsy and Traveller sites that could come forward in the countryside would be very small; therefore the overall neutral (0) effect already identified for policy S14 in relation to SA objective G (meeting housing needs) is unchanged.
MM12	TIV3: Eastern Urban Extension Environmental Protection and Green Infrastructure	70	Amend criterion e) as follows: "Appropriate provision of sewerage system to serve the development ~~**and a Sustainable Urban Drainage Scheme to deal with all surface water from the development and arrangements for future maintenance**~~ ;"	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed following the 2015 Proposed Submission consultation in response to request by the Environment Agency. Reference to Sustainable Urban Drainage is now included in criterion f).	**No change to SA findings:** The proposed amendment to the wording of policy criterion e does not affect the overall meaning of policy TIV3, as reference to SuDS remains included in the policy within criterion f. Therefore, the mitigation which was previously found to change the originally significant negative (-3) effect on SA objective C (climate change) to minor positive (+1), is unaffected.
MM13	TIV4: Eastern Urban Extension Community Facilities	72	Add additional policy criterion as follows: "**f) Contributions towards a new recycling centre to serve Tiverton**"	Modification proposed following Devon County Council's hearing statement, and MDDC's acceptance of Devon County Council's position at the hearings.	**No change to SA findings:** The proposed additional policy criterion will help to facilitate recycling, which will benefit SA objective D

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
					(safeguarding and minimising resource use). A significant negative (-3) effect was previously identified for the Tiverton Eastern Urban Extension policies (TIV1-5); however this is mainly due to the fact that the large new site would be built on high quality agricultural land within the greenfield site. The potential benefits of the additional policy criterion relating to waste management do not affect this overall significant negative effect. A positive (+2) effect was already identified in relation to SA objective I (infrastructure) which is also unchanged. The likely effects of any new recycling centre on the rest of the SA objectives cannot be assessed at this stage as they would depend on its location and design. However, in general the effects of a new recycling facility may include potential negative impacts on SA objectives A (natural environment) and B (built environment depending on the location of the site in relation to biodiversity features; heritage features and areas of high landscape sensitivity. There may also be an increase in traffic movements, with associated negative effects on SA objective C (climate change), although the amount of vehicle traffic

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
					generated is unlikely to be significant from a single facility. It is assumed that any proposal would be subject to detailed assessment at the planning application stage, and would be subject to relevant development management policies within the Local Plan Review, which would help to mitigate any adverse effects.
MM14	TIV4: Eastern Urban Extension Community Facilities	72	Replace criterion b) as follows: "~~**Construction cost for one primary school of 410 places and early years provision**~~ **Provision of a 420-place primary school with early years provision and a children's centre service delivery base funded by appropriate contributions from developers;**"	Modification proposed following Devon County Council's hearing statement, and MDDC's acceptance of Devon County Council's position at the hearings.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion reinforces the already positive (+2) effects that were identified in relation to SA objective H (community health and wellbeing) and I (infrastructure).
MM15	TIV15: Tiverton Infrastructure	83	Add additional policy criterion as follows: **"l) Provision of a replacement recycling centre facility".**	Modification proposed following Devon County Council's hearing statement, and MDDC's acceptance of Devon County Council's position at the hearings.	**No change to SA findings:** The proposed additional policy criterion will help to facilitate recycling, which will benefit SA objective D (safeguarding and minimising resource use). A significant negative (-3) effect was previously identified for the Tiverton Eastern Urban Extension policies (TIV1-5); however this is mainly due to the fact that the large new site would be built on high quality agricultural land within the greenfield site. The potential benefits of the additional policy criterion

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
Page 1902					relating to waste management do not affect this overall significant negative effect. A positive (+2) effect was already identified in relation to SA objective I (infrastructure) which is also unchanged. The likely effects of any new recycling centre on the rest of the SA objectives cannot be assessed at this stage as they would depend on its location and design. However, in general the effects of a new recycling facility may include potential negative impacts on SA objectives A (natural environment) and B (built environment depending on the location of the site in relation to biodiversity features; heritage features and areas of high landscape sensitivity. There may also be an increase in traffic movements, with associated negative effects on SA objective C (climate change), although the amount of vehicle traffic generated is unlikely to be significant from a single facility. It is assumed that any proposal would be subject to detailed assessment at the planning application stage, and would be subject to relevant development management policies within the Local Plan Review, which would help to mitigate any adverse effects.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
MM16	TIV16: Blundells School	84	Add additional criterion as follows: **"k) The creation of additional/compensatory floodplain should secure wider environmental and sustainability benefits."** Amend paragraph 3.60c to insert at the end of the sentence "**subject to the provision of wider environmental and sustainability benefits".**	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed to reflect the representation made by the Environment Agency (6734) which notes that this is a key consideration of the Environment Agency when consulted on development within the floodplain.	**No change to SA findings:** The additional policy criterion will reinforce the positive (+2) effects already identified in relation to SA objectives A (natural environment) and C (climate change) for policy TIV16.
MM17	Paragraph 3.70	89	Amendment to proposed modified text within paragraph 3.70 as follows: "Traffic management measures on Willand Road and Tiverton Road will also be required. Devon County Council queue length monitoring at junction 28 of the M5 motorway indicates congestion at the AM peak. The development will need to mitigate its impact on the junction's capacity through implementation of ~~**an improvement scheme, either to the existing junction or in the form of more extensive junction improvement works involving a second overbridge required in connection with development east of Cullompton under policy CU7**~~ **of the Cullompton Town Centre Relief Road**."	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the supporting text does not affect the overall meaning of policy CU1 or its likely effects on the SA objectives.
MM18	CU2: North West Cullompton Transport Provision	90	Amendment to criterion (h) as follows: ~~**"Financial contributions towards C**~~**e**apacity improvements at Junction 28 of the M5**, to deliver a strategic highway**	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the overall meaning of policy CU2 or

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			improvement as demonstrated by capacity studies completed to assess the impact of the traffic generated from the site."		its likely effects on the SA objectives.
MM19	Paragraph 3.75	90	Amendment to proposed modified text within paragraph 3.75 as follows: "The Development will need to mitigate its impact upon capacity at junction 28 of the M5 ~~**by financial contributions towards junction improvements**~~."	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the supporting text does not affect the overall meaning of policy CU2 or its likely effects on SA objectives.
MM20	CU4: North West Cullompton Community Facilities	93	Replace criterion b) as follows: "~~**Construction costs for 300 places that arise from the development to contribute to a 420 place primary school with provision for early years**~~**; Provision of a 420-place school with early years provision and a children's centre service delivery base funded by appropriate contributions from developers."**	Modification proposed following Devon County Council's hearing statement, and MDDC's acceptance of Devon County Council's position at the hearings.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the positive (+2) effect already identified in relation to SA objective I (infrastructure). While the policy now makes reference to the provision of a children's centre service delivery base, a positive (+2) effect was already identified in relation to SA objective H (community health and wellbeing).
MM21	CU4: North West Cullompton Community Facilities	93	Add additional policy criterion as follows: "**e) Contributions towards a new recycling centre to serve Cullompton**"	Modification proposed following Devon County Council's hearing statement, and MDDC's acceptance of Devon County Council's position at the hearings.	**No change to SA findings:** The proposed additional policy criterion will help to facilitate recycling, which will benefit SA objective D (safeguarding and minimising resource use). A significant negative (-3) effect was previously identified for the Cullompton North West policies (CU1-6); however this is

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
					mainly due to the fact that the large new site would be built on high quality agricultural land within the greenfield site. The potential benefits of the additional policy criterion relating to waste management do not affect this overall significant negative effect. A positive (+2) effect was already identified in relation to SA objective I (infrastructure) which is also unchanged. The likely effects of any new recycling centre on the rest of the SA objectives cannot be assessed at this stage as they would depend on its location and design. However, in general the effects of a new recycling facility may include potential negative impacts on SA objectives A (natural environment) and B (built environment depending on the location of the site in relation to biodiversity features; heritage features and areas of high landscape sensitivity. There may also be an increase in traffic movements, with associated negative effects on SA objective C (climate change), although the amount of vehicle traffic generated is unlikely to be significant from a single facility. It is assumed that any proposal would be subject to detailed assessment at the planning application stage, and would be

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
					subject to relevant development management policies within the Local Plan Review, which would help to mitigate any adverse effects.
MM22	CU6: North West Cullompton Phasing	95	Replacement policy text for criterion (i) of the policy as follows: ~~**Provision of M5 access improvements before any dwellings are occupied and thereafter broadly in step with development.**~~ **Occupation of no more than 600 dwellings prior to the completion of the Cullompton Town Centre Relief Road**	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the positive (+2) effect already identified in relation to SA objective I (infrastructure) as the policy will still require housing delivery to be phased in line with the delivery of road infrastructure.
MM23	Paragraph 3.94	96	Amendment to proposed modified text within paragraph 3.94 as follows: "Devon County Council queue length monitoring at junction 28 of the M5 motorway indicates congestion at the AM peak. ~~**The development will need to mitigate its impact upon the junction's capacity through implementation of an improvement scheme, either to the existing junction or in the form of more extensive junction improvement works involving a second overbridge required in connection with development east of Cullompton under Policy CU7.**~~ **No more than 600 dwellings should be occupied before the Cullompton Town Centre Relief Road is completed and open to traffic. The provision of the Town**	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendments to the supporting text reflect the changes that are proposed to policy CU6, which are considered separately above in terms of their implications for the SA findings.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			Centre Relief Road provides increased capacity at J28 M5.”		
MM24	CU7: East Cullompton	97	Amendment to criterion (f) as follows: “f) ~~**Transport provision to ensure appropriate accessibility for all modes, including a new or improved access and egress onto the M5 motorway**~~ **Provision of transport improvements to ensure safe and suitable access for all modes, including necessary capacity improvements to M5 Junction 28** and pedestrian and cycle links across the motorway to the existing town;”	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the overall meaning of policy CU7 or its likely effects on the SA objectives.
MM25	CU8: East Cullompton Transport Provision	99	Replacement policy text for criterion (a) of the policy as follows: ~~**Provision of mitigation measures to ensure only acceptable impacts occur to J28 of the M5 as a result of traffic generated from the site**~~ **Capacity improvements at junction 28 M5 to deliver a strategic highway improvement as demonstrated by capacity studies completed to assess the impact of the traffic generated from the site;**	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the overall meaning of policy CU8. The positive (+2) effect previously identified in relation to SA objective I (infrastructure) is unchanged.
MM26	CU10: East Cullompton Community Facilities	102	Amend criterion a) as follows: a) ~~**A site of 2.5 hectares for a new primary school at no cost to the Local Education Authority**~~ **A serviced site of 2.5ha for a new**	Modification proposed following Devon County Council’s hearing statement, and MDDC’s acceptance of Devon County Council’s position at the hearings.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the overall meaning of policy CU10. The already positive (+2) effect

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			630 place primary school, or alternatively 3ha of serviced land in two parcels of 1.1ha and 1.9ha appropriately located for the delivery of two new primary schools, at no cost to the Local Education Authority; Amend criterion c) as follows: "~~Construction costs for a 650 place primary school or two 325 place primary schools, including provision for early years education.~~ Construction costs for a primary school **capacity of** ~~**for**~~ at least 630 places plus additional early years provision**, including the requisite land to deliver these facilities**. The required primary school capacity should be delivered through the provision of either one or two schools;"		identified in relation to SA objective I (infrastructure) is unchanged.
MM27	CU10: East Cullompton Community Facilities	102	Add additional policy criterion as follows: "**g) Contributions towards a new recycling centre to serve Cullompton**"	Modification proposed following Devon County Council's hearing statement, and MDDC's acceptance of Devon County Council's position at the hearings.	**No change to SA findings:** The proposed additional policy criterion will help to facilitate recycling, which will benefit SA objective D (safeguarding and minimising resource use). A significant negative (-3) effect was previously identified for the East Cullompton policies (CUL7-12); however this is mainly due to the fact that the large new site would be built on greenfield land, some of which is of the highest agricultural quality. The potential benefits of the additional policy criterion relating to waste

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
					management do not affect this overall significant negative effect. A positive (+2) effect was already identified in relation to SA objective I (infrastructure) which is also unchanged. The likely effects of any new recycling centre on the rest of the SA objectives cannot be assessed at this stage as they would depend on its location and design. However, in general the effects of a new recycling facility may include potential negative impacts on SA objectives A (natural environment) and B (built environment depending on the location of the site in relation to biodiversity features; heritage features and areas of high landscape sensitivity. There may also be an increase in traffic movements, with associated negative effects on SA objective C (climate change), although the amount of vehicle traffic generated is unlikely to be significant from a single facility. It is assumed that any proposal would be subject to detailed assessment at the planning application stage, and would be subject to relevant development management policies within the Local Plan Review, which would help to mitigate any adverse effects.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
MM28	CU12: East Cullompton Phasing	104	Replacement policy text for criterion (f) as follows: f) **~~Provision of the first phase of comprehensive M5 access improvements before any dwellings are occupied, followed by strategic highways infrastructure broadly in step with development~~** **Capacity improvements at junction 28 M5 to deliver a strategic highway improvement as demonstrated by capacity studies completed to assess the impact of the traffic generated from the site;** and	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the overall meaning of policy CU12. The positive (+2) effect previously identified in relation to SA objective I (infrastructure) is unchanged.
MM29	Paragraph 3.116	105	Delete penultimate sentence within paragraph 3.116 of the supporting text as follows: **~~"The first phase referred to in criterion (f) above therefore only relates to the subsequent highway works set out in the Devon County Council Report."~~**	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the supporting text does not affect the overall meaning of policy CU12, changes to which are considered separately above and below in terms of their implications for the SA findings.
MM30	CU12: East Cullompton Phasing	106	Paragraph 3.120, amend as follows: "Subject to viability, affordable housing will be provided at a rate of approximately **~~25%~~** **28%**, in step with the market housing".	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed to correct typographical error and to ensure supporting text is consistent with policy.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion is to correct a typographical error and does not affect the significant positive (+3) effect already identified in relation to SA objective G (meeting housing needs).

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
MM31	CU17: Week Farm	110	Replacement policy text for proposed criterion (g) as follows: (g) "~~**Provision of M5 access improvements before any commercial floorspace is brought into use**~~ **Capacity improvements at junction 28 M5 to deliver a strategic highway improvement as demonstrated by capacity studies completed to assess the impact of the traffic generated from the site**;"	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the overall meaning of policy CU17 and is made to reflect the latest evidence regarding infrastructure requirements for the site. The neutral (0) post-mitigation effect previously identified in relation to SA objective I (infrastructure) is therefore unchanged.
MM32	CU18: Venn Farm	111	Replacement policy text for proposed criterion (g) as follows: (g) "~~**Provision of M5 access improvements before any commercial floorspace is brought into use**~~ **Capacity improvements at junction 28 M5 to deliver a strategic highway improvement as demonstrated by capacity studies completed to assess the impact of the traffic generated from the site;**"	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the overall meaning of policy CU18 and is made to reflect the latest evidence regarding infrastructure requirements for the site. The neutral (0) post-mitigation effect previously identified in relation to SA objective I (infrastructure) is therefore unchanged.
MM33	Paragraph 3.143a	114	Amend paragraph 3.143a as follows: "…the final scheme will need to incorporate design solutions which mitigate such impacts. **Any loss of floodplain at this location should be mitigated by the creation of additional/compensatory floodplain which should secure wider environmental and sustainability**	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed in response to the representation made by the Environment Agency during the 2017 modifications consultation.	**No change to SA findings:** The proposed amendment to the wording of the supporting text does not affect the overall meaning of policy CU19. It will provide some additional mitigation for the effects of the policy in relation to SA objective C (climate change) but is not considered to change the positive (+2) effect that

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			benefits including the provision of appropriate ecological and biodiversity enhancements."		has already been identified post-mitigation. The modification could also provide some additional mitigation for the impacts of policy CU19 on SA objective A (natural environment) although the reference to ecological and biodiversity enhancements is not considered to change the overall negative (-2) score identified previously.
MM34	CU20: Cullompton Infrastructure	114	Add additional policy criterion as follows: **"n) Provision of a replacement recycling centre facility".**	Modification proposed following Devon County Council's hearing statement, and MDDC's acceptance of Devon County Council's position at the hearings.	**Change to SA findings:** The proposed additional policy criterion will help to facilitate recycling, which will benefit SA objective D (safeguarding and minimising resource use). A minor positive (+1) effect was previously identified on SA objective D for policy CU20 as the site identified for the railway station is on brownfield land. **The addition of a new policy criterion relating to a replacement recycling facility would increase this to a positive (+2) effect.** The already significant positive (+3) effect on SA objective I (infrastructure) is unchanged. The likely effects of any replacement recycling centre on the rest of the SA objectives cannot be assessed at this stage as they would depend on its location and design. However, in general the effects of a new recycling facility may include potential negative

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
					impacts on SA objectives A (natural environment) and B (built environment depending on the location of the site in relation to biodiversity features; heritage features and areas of high landscape sensitivity. There may also be an increase in traffic movements, with associated negative effects on SA objective C (climate change), although the amount of vehicle traffic generated is unlikely to be significant from a single facility. It is assumed that any proposal would be subject to detailed assessment at the planning application stage, and would be subject to relevant development management policies within the Local Plan Review, which would help to mitigate any adverse effects.
MM35	CU21: Land at Colebrook	115	Remove contingency status. Modifications proposed as follows: Land at Colebrook **~~CONTINGENCY SITE~~** A site of 4.8 hectares at Colebrook **~~is identified as a contingency site~~ allocated** for residential development **~~to be released in accordance with Policy S4,~~** subject to the following: a) 100 dwellings with 28% affordable housing; b) **~~The development shall not commence until~~** ~~the Town Centre~~	Contingency status removed in response to the Inspector's post hearing advice note. Devon County Council has advised the timing of the development of the site is not dependent on the Cullompton Town Centre Relief Road coming forward as long as financial contributions are made towards the delivery of the relief road. Please refer to the updated housing land supply statement. Criterion b) deleted following Devon County Council's highway consultation	**Change to SA findings:** The removal of the contingency status of this site does not change its likely effects on the SA objectives; however, **the effects previously identified would be more certain to occur. Effects may also occur earlier in the Plan period** now that the allocation of the site is no longer dependent on the relief road. A likely significant positive (+3) effect was identified in relation to SA objective G (meeting housing needs) but no likely significant negative effects were

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			~~Relief Road has been provided~~**~~; completion of the North West Cullompton through route linking Tiverton Road to Willand Road and provision of the first phase of comprehensive M5 access improvements~~**; c) Provision of two points of access from Siskins Chase; d) Provisions of 1.1 hectares of green infrastructure, to include the retention of land in the floodplain as informal amenity open space and for Sustainable Urban Drainage provision; e) Measures to protect and enhance trees, hedgerows and other environmental features which contribute to the character and biodiversity, maintaining a wildlife network within the site and linking to the surrounding countryside; f) Archaeological investigation and appropriate mitigation; and g) Transport assessment and implementation of travel plans and other measures to minimise carbon footprint and air quality impacts. Delete paragraph 3.148 from the supporting text. Delete penultimate sentence from paragraph 3.149 as follows: "**~~Site commencement will also need to be deferred unitl after the completion of the through route linking Willand Road to Tiverton Road, which is being~~**	response to MDDC in March 2019, to the current planning application reference 19/00118/MOUT (outline application for up to 105 dwellings on land at Colebrook Lane). Devon County Council has updated its previous highways advice and there is no longer a requirement for the prior completion of the North West Cullompton distributor road (Tiverton Road to Willand Road link).	identified. The removal of the criterion relating to the timing of the development in relation to road infrastructure does not affect the SA findings. The removal of this criterion reflects the latest evidence regarding the requirements for infrastructure to support the development.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			~~**provided as part of the North West Cullompton allocation.**~~ *Modify the Policies Map as shown on Plan MM35.*		
MM36	Paragraph 3.149	116	Amend paragraph 3.149 of the supporting text as follows: 3.149 ~~If this site comes forward for development, it must contribute to the provision of offsite highways infrastructure.~~ Development in this location has the potential to place pressure on the capacity of both the strategic and local road network. ~~**Devon County Council has therefore stipulated that development should only take place providing there is sufficient network capacity. If released, the site will need to be phased to come forward after further M5 access improvements are implemented.**~~ Any application for development must undertake an assessment of the impact of the proposal on both the capacity of the local road network and Junction 28 of the M5 and permission will only be granted where there are no significant adverse impacts ~~**which cannot be mitigated**~~. Site commencement will also need to be deferred until after the completion of the through route linking Willand Road to Tiverton Road, which is being provided as part of the North West Cullompton allocation. The site is expected to contribute to the provision of off-**site** highways infrastructure. ~~Development in~~	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England. Further amendment to remove the words "…which cannot be mitigated" to improve clarity.	**No change to SA findings:** The proposed amendments to the supporting text reflect the changes to policy CU21, which are considered separately above in terms of their implications for the SA findings.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			~~this location would increase traffic through the town centre, so would not be permissible until the Town Centre Relief Road has been provided, offering an alternative route.~~ The development would also be expected to provide two points of access from Siskin~~s~~ Chase.		
MM37	CRE5: Pedlerspool, Exhibition Road	121	Amendment to criterion (b) to include reference to "**with early years provision and children's centre service delivery base**".	Modification proposed following Devon County Council's hearing statement, and MDDC's acceptance of Devon County Council's position at the hearings.	**No change to SA findings:** The fact that the new primary school is to include early years provision and a children's centre service delivery base will have a positive effect on local health and wellbeing as such centres will provide services such as baby clinics and other family support. A positive (+2) effect was already identified for this policy in relation to SA objective H (community health and wellbeing). It is assumed that any additional trip generation is likely to be minimal and is not considered to affect the SA objectives.
MM38	J27: Land at Junction 27 of the M5 Motorway	128	Replace criterion b) as follows: "~~**Provision of transport improvements to ensure appropriate accessibility for all modes, including new or improved access and egress onto the M5 motorway and pedestrian and cycling link across the motorway to Tiverton Parkway Railway Station.**~~ **Provision of transport improvements to ensure safe and suitable access for all modes,**	Amendment agreed within Statement of Common Ground (SCG-10) between MDDC, Devon County Council and Highways England.	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the overall meaning of policy J27 and is made to reflect the latest evidence regarding infrastructure requirements for the site.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			including necessary capacity improvements to M5 Junction 27 and pedestrian and cycling link across the motorway to Tiverton Parkway Railway Station"		
MM39	J27: Land at Junction 27 of the M5 Motorway and paragraph 3.184d	128	Delete criterion e): "**~~Prior to the approval of any planning permission for the site any required mitigation measures for the Culm Grasslands Special Area of Conservation shall be identified and agreed together with a time scale for their provision and a mechanism for their maintenance.~~**" Para3.184d, amend as follows: "The proposals for a major facility of this nature neds to be considered carefully in terms of its impacts and the policy makes provision for detailed transport assessments, environmental protection and green infrastructure, energy conservation, provision of improved public transport, pollution and drainage considerations, phasing and importantly, master planning with full public consultation prior to any planning applications being approved. **Any loss of floodplain at this location should be mitigated by the creation of additional/compensatory floodplain which should secure wider environmental and sustainability benefits including provision of**	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Deletion of the reference to mitigation measures with regard to the Culm Grasslands Special Area of Conservation to reflect the latest evidence in the J27 proposals: Habitat Regulations Assessment Appropriate Assessment Report (2016) and representation made by Natural England (6242). Reference to floodplain in response to representation made by the Environment Agency (6734) to the 2017 modifications consultation.	**No change to SA findings:** The deletion of criterion 'e' is proposed to reflect the latest evidence regarding the likely impacts of the J27 development on the Culm Grasslands SAC. The HRA for the Local Plan Review has concluded that the J27 proposal would not have an adverse effect on the integrity of the SAC and therefore reference to mitigation is no longer required. The minor negative (-1) effect previously identified for this policy in relation to SA objective A (natural environment) is unchanged as the score was based on other factors as well as potential impacts on the SAC, i.e. potential landscape impacts from a development of this scale.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			appropriate ecological and biodiversity enhancement. Section 106 planning obligations will also make provision for any necessary infrastructure and public transport improvements ~~**and would need to ensure appropriate mechanisms are in place to ensure that the integrity of the Culm Grasslands SAC will not be adversely affected."**~~		
MM40	J27: Land at Junction 27 of the M5 Motorway	128	Include additional criterion in policy as follows: "**a) Any planning application which includes a 'designer outlet shopping centre' should be accompanied by a full Retail and Leisure Impact Assessment".**	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed to ensure the potential impact is appropriately and adequately assessed at the planning application stage. Amendment also reflects comments made by The Crown Estate and TH Real Estate c/o Montagu Evans (6234).	**No change to SA findings:** The requirement for a retail and leisure impact assessment to accompany any application for a designer outlet shopping centre will reinforce the already significant positive (+3) effect previously identified for this policy in relation to SA objective E (economic growth and employment).
MM41	J27: Land at Junction 27 of the M5 Motorway Paragraph 3.184d	129	Include the following text at the end of the paragraph 3.184d: "**Priority habitats exist within the site and in line with criterion c) of Policy J27 should be protected and enhanced**."	Amendment as agreed with Natural England (see Statement of Common Ground SCG-6 MDDC and Natural England)	**No change to SA findings:** The proposed amendment to the supporting text involves cross referring to criterion c within policy J27 itself, which is unchanged.
MM42	SP2: Higher Town Sampford Peverell	146	Amend Policy SP2 as follows: "A site of 6 hectares at Higher Town, Sampford Peverell is allocated for a low density residential development, ~~**to come forward following the commencement of development of the M5 Junction 27**~~	In response to the Inspector's post hearings advice note: "…Given that the Policy SP2 allocation is designed to address part of that overall housing requirement, the tie serves no purpose. Reference to it should be	**Change to SA findings:** The proposed amendment to policy SP2 does not change the likely effects of this site on the SA objectives; however, bringing forward the delivery of the site would mean that **the effects previously identified**

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			~~**allocation,**~~ subject to the following:"	removed."	**would occur earlier in the Plan period**. No likely significant effects, either positive or negative, were identified for this site allocation post-mitigation.
MM43	SP2: Higher Town, Sampford Peverell and paragraph 3.224c	146	Delete criterion b) and re-label the remaining criteria accordingly. ~~**b)No development until the completion of improved access works to the A361;**~~ Delete paragraph 3.224c of the supporting text. ~~3.224c The Highway Authority has advised that any development of the site should only commence once improvements to the A361 junction at Sampford Peverell have been implemented to create west facing slip roads to enable direct access to and from the west. The site is required to meet additional housing need arising from the allocation at Junction 27 of the M5 motorway. Accordingly it shall only come forward following the commencement of development on that site.~~	In response to the Inspector's post hearings advice note: "It was clear from the helpful submissions of the Highway Authority, that the limitation on development until the completion of improved access works to the A361 is unnecessary. Criterion b) needs to be removed."	**No change to SA findings:** The proposed amendment to the wording of the policy criterion does not affect the overall meaning of policy SP2 and is made to reflect the latest evidence regarding infrastructure requirements for the site.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
MM44	SP2: Higher Town, Sampford Peverell	146	Include new criterion: "**Improved access to the village for pedestrians and cyclists**"	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed to provide greater clarity in response to a number of representations from individuals and through agreement of inclusion of criterion by Devon County Council.	**Change to SA findings:** The additional reference to pedestrian and cycle access will reinforce the already positive (+2) effect identified in relation to SA objective C (climate change). **The previously neutral (0) effect on SA objective H (health and wellbeing) is increased to a minor positive (+1) effect** as a result of the additional reference to active travel.
MM45	SP2: Higher Town, Sampford Peverell	146	Amend criterion g) as follows: "~~2~~ **2.5 hectares of Green Infrastructure laid out and managed with landscaping and open space.**" *Modify the Policies Map as shown on Plan MM45.*	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. The area of Green Infrastructure has been further extended to limit the impact of the setting of the listed building.	**No change to SA findings:** The increased provision of green infrastructure will reinforce the mitigation which has already been found to reduce an originally uncertain negative (-2/?) effect on SA objective B (built environment) to an uncertain neutral (0/?) effect. The increase in provision from 2 to 2.5ha is not considered to change the neutral effect to positive, taking into account the other elements of the policy.
MM46	DM1: High Quality Design and new paragraph 4.5b	153-154	Insert additional criteria as follows: "**g) Adequate levels of daylight, sunlight and privacy to private amenity spaces and principal windows;** **h) Suitably sized rooms and overall**	In response to the Inspector's post hearings advice note: "Criteria a) and c) [of DM12] seem to me to be more about design and might	**Change to SA findings:** The proposed new criteria are brought into the policy from the now deleted policy DM12. The addition of these criteria to policy DM1 reinforces the already significant positive (+3)

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			floorspace which allows for adequate storage and movement within the building together as set out in the Nationally Described Space Standard with external spaces for recycling, refuse and cycle storage; and **i) On sites of 10 houses or more the provision of 20% of dwellings built to Level 2 of Building Regulations Part M 'access to and use of dwellings."** Insert additional supporting text as follows: "**4.5b National policy states that planning should always seek to secure high quality design and a good standard of amenity for all existing and future occupants of land and buildings. This is particularly important for the design of the homes that people live in and the spaces that surround those homes. The aim in Mid Devon is to deliver high quality buildings and spaces that meet the needs of users, taking account of an aging population whilst ensuring compatibility with surrounding development and uses. Though compliance is delivered through buildings regulations, criterion i) will be implemented through a condition attached to the planning permission."**	find a more comfortable home as part of Policy DM1. I take a similar view in relation to criterion b)." "the general size and configuration of a dwelling, and the proper handling of recycling, refuse and cycle storage, are design-based considerations and the reference to the Nationally Described Space Standard seems to be unnecessary.' If these criteria are adjusted to make plain that they refer to the design of new housing, and relocated in Policy DM1, then that would be a more efficient way of dealing with the matter." "I am not convinced that the requirement for 30% of houses on sites of 10 houses or more to be built to Level 2 of Building Regulations Part M has been made out. I believe 20, as a carry forward from the existing policy that refers to Lifetime Homes standards is reasonable but again, this requirement could be moved into Policy DM1." Reference to the Nationally Described Space Standard is retained in the policy. This is since MDDC's experience of applying minimum size standards for decision making purposes on	effects on SA objectives B (built environment) and C (climate change) as well as the positive (+2) effect on SA objective H (health and wellbeing) and **increases the positive (+2) effect on SA objective G (meeting housing needs) to significant positive (+3)**. The policy now requires 20% of dwellings on sites of 10 houses or more to be built to Level 2 of Building Regulations Part M 'access to and use of dwellings" where this was previously 30%; however this change is not considered to change the SA effects identified as the policy will still have positive effects in terms of providing a range of accessible housing.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
				development proposals requires that the Nationally Described Space Standards are explicit in local plan policy.	
MM47	DM2: Renewable and Low Carbon Energy	154	Amend the third sentence in Policy DM2 as follows: "Proposals must demonstrate that impacts are or can be made acceptable **<u>in relation to</u>**: ~~**and that the development will preserve**~~:"	In response to the Inspector's post hearings advice note: "I have some concerns about the wording of Policy DM2 because the first part seeks to avoid any significant adverse impacts, but the second part requires renewable and low carbon energy to preserve (which I take to mean cause no harm to) landscape character, the setting of heritage assets, living conditions, and so on. The former is the correct approach and the second part needs to be adjusted to remove the contradiction. This will require a MM."	**No change to SA findings:** The proposed modification does not affect the overall meaning or purpose of policy DM2, or its likely effects on the SA objectives.
MM48	DM7: Traveller Sites and paragraph 4.29	164-165	Amend Policy DM7 as follows: **1) <u>Planning applications for Pitches and Plots</u>** Planning applications for gypsy and traveller pitches, or plots for travelling showpeople, will be permitted where: ~~a)The need cannot be met on another suitable site in Mid Devon which has consent or is allocated for gypsy and traveller pitches;~~ ~~b)Local services can be accessed without the use of a car;~~ a) Suitable onsite facilities will be	In response to the Inspector's post hearings advice note on the provision for Gypsies and Travellers.	**No change to SA findings:** The additional criteria relating to landscape and ecological impacts and flood risk would reinforce the mitigation which has already been found to reduce a negative (-2) effect on SA objective A (Natural Environment) to minor negative (-1). The overall number of pitches to be provided is unchanged. While the proposed modifications could mean that Gypsy and Traveller sites are more likely to come forward in the countryside, rather than within the

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			provided including space for children's play; b) The proposal will have suitable environmental quality for residents including non-isolating boundary treatments; c) **The site will not cause unacceptable landscape or ecological impact and is not located in an area at high risk of flooding;** **d)** Occupation will be limited to those who meet the Government's published definition of gypsies and travellers, including travelling showpeople **or their dependents; and** **e) Safe and convenient access to local facilities is provided** ~~**Where development proposals are considered under S13 "Villages", local services can be accessed without the use of a car.**~~ ~~**Where development proposals are considered under S14, the need cannot be met on another suitable site in Mid Devon which has consent or is allocated for gypsy and traveller pitches.**~~ Sites with associated employment or storage elements ~~**may**~~ **will** be		larger housing site allocations, any development of this nature would be very small-scale and other policies in the Local Plan Review would still apply, including S14 which is a criteria-based policy relating to all types of development in the countryside.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
Page 1924			permitted where there is specific justification and the location**, scale, and nature** of the proposed development will not have harmful impacts on local amenity or the local environment. Gypsy and traveller accommodation may be included as part of the affordable housing requirement. **2. Provision on allocated sites** **Gypsy and Traveller pitches on allocated sites (sought by Policies TIV1, CU1, CU7 or CRE5) should be provided on site unless it is demonstrated that off-site provision will achieve a more favourable outcome for Gypsies and Travellers taking into account:** **i) Pitch numbers;** **ii) Site facilities;** **iii) Accessibility to services, including health and education;** **iv) Early delivery of serviced pitches or plots which are available for occupation; and** **v) The provision of an effective mechanism for delivery.**		

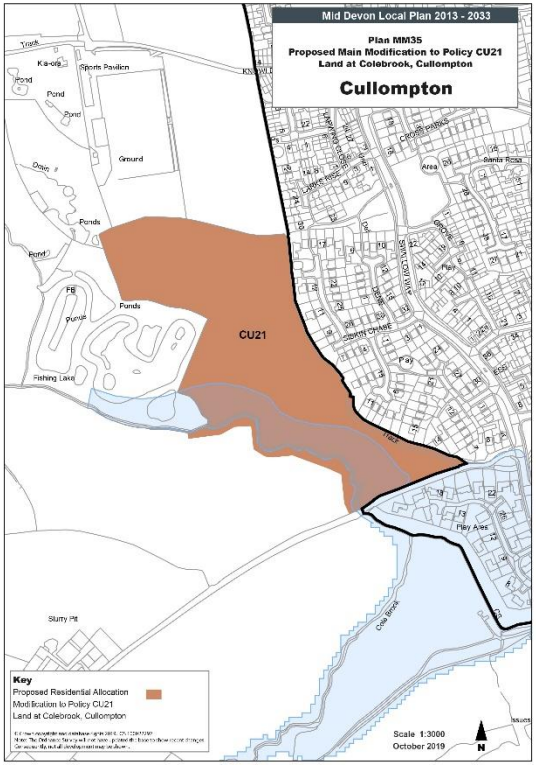
No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			Such sites must also meet the requirements of part 1 of Policy DM7 above, Amend supporting text in paragraph 4.29 as follows: "4.29 There is a need for 35 new pitches for gypsies and travellers for the period 2014-34**, and 11 plots for travelling showpeople for the period 2014-34. The majority of this** ~~**This**~~ need is proposed to be met on the largest ~~**strategic allocations. The travelling showpeople community is predominately based in one large site at Cullompton, which is at capacity. A need for 11 plots has been identified and the Council is in discussions with a landowner to grant permission for one additional site near to the town which will meet the outstanding requirement.** ~~The need for gypsy and traveller accommodation is identified to be in the region of 25 pitches across the plan period.~~ ~~**These are to be included within**~~ allocated developments at Tiverton Eastern Urban Extension, North West Cullompton, and Pedlerspool in Crediton**. Pitches must be provided on-site unless the more favourable outcome described by Policy DM7 is demonstrated. Any proposals for more favourable off-site provision must identify and provide serviced sites in accordance with Policy DM7. A clear mechanism to ensure that pitches or**		

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			plots are delivered in such a way as to achieve a more favourable outcome for the travelling community must be identified. **This will usually be through a s106 agreement requiring the developer to identify and obtain planning permission (which will not be unreasonably withheld by the Council) for the required number and standard of pitches. The pitches will be provided by the development itself or where the land is transferred for a nominal value, by an agreed third party Registered Provider or other agreed private provider, for the sole purpose of occupation and ancillary business by Gypsies and Travellers. The off-site provision of pitches must be provided and made available for occupation before the occupation of a specified proportion of the provision of on-site open market dwellings as part of the larger housing proposal at TIV1, CU1, CU7 or CRE5.** Where gypsy and traveller pitches are provided **on-site** on housing allocations, these are to be counted against the affordable housing targets for that site. ~~**There are also existing consented sites in Mid Devon. Proposals for gypsy and traveller accommodation will not be permitted in other locations, unless it is demonstrated that the existing consented or allocated sites will not be**~~		

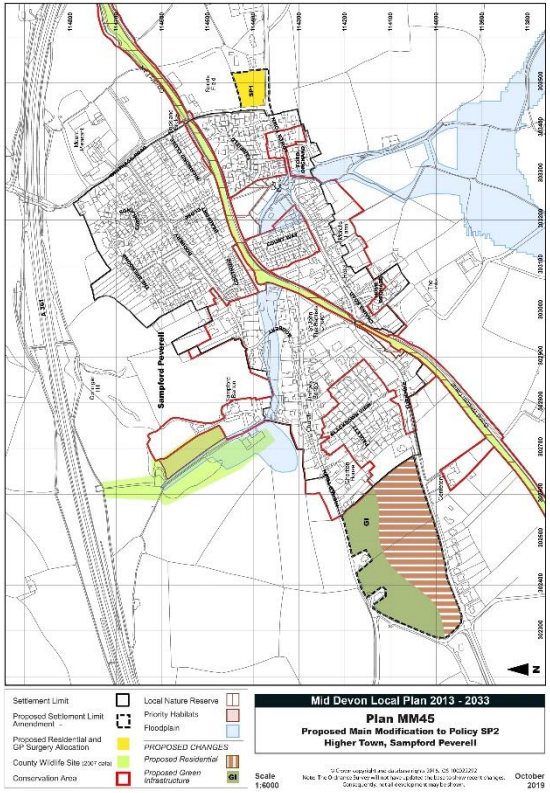
No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			~~**available to the prospective occupiers in a reasonable timescale."**~~		
MM49	DM12: Housing Standards	170	Delete Policy DM12 Housing Standards (incorporating proposed modifications in the 2017 consultation) and move its content, with amendments in accordance with the Inspector's post hearings advice note, to Policy DM1. ~~**Policy DM12**~~ ~~**Housing Standards**~~ ~~**New housing development should be designed to deliver:**~~ ~~**a) Adequate levels of daylight, sunlight and privacy to private amenity spaces and principal windows;**~~ ~~**b) Suitably sized rooms and overall floorspace which allows for adequate storage and movement within the building together as set out in the Nationally Described Space Standard with external space for recycling, refuse and cycle storage;**~~ ~~**c) Private amenity space that reflects the size, location, floorspace and orientation of the property; and**~~ ~~**d) On sites of 10 houses or more the provision of 30% of**~~	In response to the Inspector's post hearings advice note. Please refer to MM46.	**Change to SA findings:** The proposed deletion of this policy means that **the effects previously identified in the SA will no longer occur as a result of policy DM12.** Likely significant positive (+3) effects were previously identified (post-mitigation) in relation to SA objectives B (built environment) and G (meeting housing needs). However, the policy criteria are now proposed to be incorporated into policy DM1; therefore **the likely effects will still occur as a result of that policy** (as recorded earlier in this table).

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			~~**dwellings built to Level 2 of Building Regulations Part M 'access to and use of dwellings'**~~		
MM50	DM19: Protection of Employment Land and paragraph 4.60	179	Delete Policy DM19 criterion c) ~~**c) A sequential viability test has been applied following the unsuccessful marketing of the site, based on the following sequence of testing:**~~ ~~**i) Mixed use of the site that incorporates an employment generating use, then**~~ ~~**ii) Non-employment use.**~~ Amend para 4.60 of the supporting text as follows: **…"~~If there is no interest in the site as a result of marketing, the potential of the site for mixed use development including employment must be considered in preference to the total loss of employment. This will involve determining whether the site still has the potential to be developed viably for mixed use development or can only be viable if the whole site is developed for non-employment uses. In all cases, the proposed use must not significantly harm any other existing uses in the area, or be harmed by those uses. For~~**	In response to the Inspector's post hearings advice note: "There was some discussion about criterion c) of Policy DM19 which deals with the protection of employment land. In my view, if criterion b is satisfied, and suitable marketing (which might include for mixed use purposes) has taken place at an appropriate price, for at least 18 months without any interest, then an alternative use (which may take the form of a mixed use) should be allowed to come forward. Criterion c) which requires an additional sequential viability test is far too onerous a requirement and should be removed through a MM." Supporting text deleted to accord with proposed MM.	**No change to SA findings:** The proposed modification makes the policy requirements slightly less stringent; however, this was because the Inspector felt that the other policy criteria already provide appropriate protection for employment sites. The overall meaning of the policy and likely sustainability effects are unchanged.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			~~**example, housing development may not be acceptable in close proximity to general industry, depending on the nature and scale of the industrial use."**~~		
MM51	DM25: Development Affecting Heritage Assets	186	Amend Policy DM25 as follows: "a) Apply a presumption in favour of **preserving or enhancing all designated** ~~**preservation in situ in respect of the most important**~~ heritage assets **and their settings**; b) Require development proposals likely to affect **the significance of** heritage assets ~~**and their settings**~~, including new buildings, alterations, extensions, changes of use and demolitions, to consider their significance, character, setting (including views to or from), appearance, design, layout and local distinctiveness, and the opportunities to enhance them; c) Only approve proposals that would **lead to substantial harm to or total loss of significance of a designated heritage assets where it can be demonstrated that the substantial harm or loss is necessary to achieve substantial public benefits that outweigh that harm or loss** ~~**be likely to substantially harm heritage assets and their settings if substantial public benefit outweighs that harm**~~ or the requirements ~~**of paragraph 133**~~ of the National Planning Policy Framework are met;	In response to the Inspector's post hearings advice note: "To comply with statute, criterion a) should apply a presumption in favour of preserving or enhancing all designated heritage assets, not just the most important ones. A reference to their setting would assist too". "Criterion b) needs to refer to the significance of heritage assets rather than heritage assets and their settings." "Criterion c) needs to properly reflect the wording of paragraph 133 of the (2012 version of the) Framework by referring to significance. The direct reference to paragraph 133 should be removed because planning applications will be determined using the latest version of the Framework." "Criterion d) should properly reflect paragraph 134 of the (2012) Framework and refer to significance." "Criterion e) could confine itself to 'require developers to make a	**No change to SA findings:** The proposed modifications strengthen the mitigation provided by this policy in terms of the potential impacts of new development on the historic environment; however, the SA had already identified a likely significant positive (+3) effect from this policy in relation to SA objective B (built and historic environment).



No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			d) Where a development proposal ~~would~~ **will** lead to less than substantial harm **to the significance of a designated heritage asset, this** ~~that~~ harm ~~will~~ **should** be weighed against **the public benefits of the proposal** ~~any public benefit~~, including securing **its** optimum viable use; and e) Require developers to make a proportionate but systematic assessment of ~~the~~ **any** impact on **the** setting **and thereby the significance of heritage asset(s)** ~~down in the guidance from English Heritage: "The Setting of Heritage Assets" Historic England: 'The Setting of Heritage Assets: Historic Environment Good Practice Advice in Planning: 3~~."	proportionate and systematic assessment of any impact on the setting and thereby the significance of heritage asset(s)' Pointing to HE guidance in the manner proposed seems to me to run the risk of that guidance changing."	
MM52	Paragraph 4.88	189	Amend paragraph 4.88 as follows: … "Green Infrastructure functions can coexist in one place, so the land coverage does not have to be extensive in every case, **although developments should recognise that floodplain cannot necessarily provide year-round amenity access."**	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed following representation made by the Environment Agency (673) which provides greater clarity of the ability of floodplain to be considered as Green Infrastructure but with limitations of year-round amenity access.	**No change to SA findings:** The proposed modification relates to the supporting text to policy DM26, but the overall meaning of the policy and the policy text are unchanged.
MM53	Paragraph 4.88	189	At the end of paragraph 4.88 include the following sentence: **"Development incorporating green infrastructure will be required to**	Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed following the representation	**No change to SA findings:** The proposed modification relates to the supporting text to policy DM26, but the overall meaning of the policy and



No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			submit management and maintenance details for the proposed green infrastructure.”	made by the Environment Agency to ensure green infrastructure is protected and managed beyond the initial construction/development.	the policy text are unchanged.
MM54	DM27: Protected Landscapes, and paragraph 4.94	190	Amend Policy DM27 as follows: “Development proposals ~~**within or**~~ affecting the Blackdown Hills, Area of Outstanding Natural Beauty, Dartmoor National Park, Exmoor National Park and the North Devon Biosphere Reserve must demonstrate that:..” Amend paragraph 4.94 as follows: “Where major developments are proposed within ~~**or adjoining**~~ protected landscapes **or within the setting of** ~~**or adjoining the**~~ **protected landscapes or** ~~**the**~~ National Parks, **”**	In response to the Inspector’s post hearings advice note: “The phrase ‘development proposals within or affecting’ at the beginning of Policy DM27 is a little confusing. A development proposal within a protected landscape will obviously affect it. If the intention is to offer some protection to views into or out of the protected landscape, which seems reasonable, then it may be clearer to make a specific reference to such views. This would mean a MM. Alternatively, reference could be made to the setting of a protected landscape but that is more difficult and require some form of definition in the explanatory text.” The Council has considered the Inspector’s post hearings advice note and proposes a modification accordingly. The retention of the word “affecting” in the opening sentence of amended Policy DM27 is consistent with Section 62 of the Environment Act 1995, section 11A (2 in respect of National Parks, and also Section 85 (1) of the Countryside and Rights of Way Act 2000 in respect of Areas of Outstanding Natural Beauty.	**No change to SA findings:** The proposed modification does not affect the overall meaning of policy DM27 or its likely effects on the SA objectives. The significant positive (+3) effect already identified in relation to SA objective A (natural environment) is unchanged.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
				Section 62 of the Environment Act 1995 places a duty on the Council to have regard to the purposes of National Parks in exercising any functions in relation to or affecting land in a National Park. Similarly, Section 85 of Countryside and Rights of Way Act imposes a duty on the Council to have regard to the purpose of conserving and enhancing the natural beauty within an AONB in exercising any functions in relation to or affecting land in an AONB. Modification to paragraph 4.94 taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. Modification proposed following representation made by Natural England (6242) to reflect the fact that the special character of protected landscapes includes the setting rather than only the adjoining land and follows National Planning Policy Guidance.	
MM55	DM28: Other Protected Sites and paragraphs 4.102 and 4.95		Amend Policy DM28 as follows: Delete the final paragraph: "~~**Where development proposals would lead to an individual or cumulative adverse impact on Natura 2000 sites, planning permission will be refused unless the proposal complies with criteria b) and c) above, and the**~~	In response to the Inspector's post hearings advice note: "I have a concern that Policy DM28, and in particular the way it approaches mitigation and compensation in criterion c), fails to comply with 'People over Wind' and subsequent judgements. I suggest at this stage that the Council checks this point with their expert	**No change to SA findings:** The modification is proposed to ensure that the policy wording reflects recent case law with regards to HRA; however, it does not affect the overall meaning of the policy and the positive (+2) effect already identified in relation to SA objective A (natural environment) is unchanged.

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
Page 1933			~~**fundamental integrity of the features of the Natura 2000 site would not be affected**~~ Replace the deleted final paragraph with: "**Where development proposals are likely (leaving aside mitigation measures) to have a significant effect on a European site (as defined in regulation 8 of the Conservation of Habitats and Species Regulations 2017), an appropriate assessment will be required. In such cases, planning permission will be refused unless it has been ascertained that with mitigation measures in place the development will not adversely affect the integrity of the site.**" Amend supporting paragraph 4.102 as follows: Delete the sentence: "... ~~**In the case of Natura 2000 sites, compensatory measures may only be considered if the proposal is deemed to be of overriding public interest and would involve engagement with both Central Government and European Commission.**~~" Replace the deleted sentence with: "... **In the case of European sites, where the risk of harm to the integrity of a site has not been ruled out in an**	advisors." MDDC has taken expert legal advice that has considered the wording of Policy DM28 and its supporting text at paragraph 4.102 require modification. Two modifications will be required to paragraph 4.95 to make this consistent with the modifications to Policy DM28 and paragraph 4.102.	

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
			appropriate assessment planning permission may be granted for the development only if there is no alternative solution and the development must be carried out for imperative reasons of overriding public interest. In such cases, any necessary compensatory measures must be secured." Amend the paragraph 4.95 through the deletion of the words "**~~Natura 2000 sites~~**" and "**~~Natura 2000 site~~**" and the replacement of these words with the words "**European Sites**" and "**European Site**".		

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
Plan MM35	CU21: Land at Colebrook	Policies Map		Contingency status removed in response to the Inspector's post hearing advice note. The notation on the Policies Map has been modified to show site allocation CU21 as a proposed residential allocation. This modification is necessary to reflect the proposed Main Modification to the wording of site allocation Policy CU21. Please refer to proposed Main Modification MM35.	**No change to SA findings:** This proposed amendment to the Policies Map reflects proposed modifications to the CU21 site allocation policy, which are considered separately above in terms of their implications for the SA findings (see MM35).

No.	Policy/ Paragraph	Local Plan Page	Proposed Changes	Reason	Implications for SA findings reported previously
Plan MM45	SP2: Higher Town, Sampford Peverell	Policies Map		Taken from Submission Document SD14. Included as a main modification in accordance with the Inspector's post hearing advice note. The area of Green Infrastructure has been further extended to limit the impact of the setting of the listed building. The notation on the Policies Map has been modified to show the increased area of Green Infrastructure to reflect the proposed Main Modification to criterion g) in the site allocation Policy SP2 Higher Town, Sampford Peverell Please refer to proposed Main Modification MM45.	**No change to SA findings:** This proposed amendment to the Policies Map reflects proposed modifications to the SP2 site allocation policy, which are considered separately above in terms of their implications for the SA findings (see MM45).

Conclusions

1.30 As shown in **Table 2** above, the Proposed Main Modifications would result in a small number of changes to the SA effects previously identified for the Local Plan Review (in the February 2015 SA Report and in the 2018 SA Update). These changes are summarised in **Table 3** below.

Table 3: Summary of changes to SA effects as a result of the Proposed Main Modifications

Local Plan Review policy (as proposed to be modified)	Change to SA findings previously identified in the 2015 SA Report and 2018 SA Update
CU20 Cullompton Infrastructure	The proposed additional policy criterion will help to facilitate recycling, which will benefit SA objective D (safeguarding and minimising resource use). A minor positive (+1) effect was previously identified on this objective for policy CU20 as the site identified for the railway station is on brownfield land. **The addition of a new policy criterion relating to a replacement recycling facility would increase this to a positive (+2) effect.**
CU21 Land at Colebrook	The removal of the contingency status of this site does not change its likely effects on the SA objectives; however, **the effects previously identified would be more certain to occur. Effects may also occur earlier in the Plan period** now that the allocation of the site is no longer dependent on the relief road. A likely significant positive (+3) effect was identified in relation to SA objective G (meeting housing needs) but no likely significant negative effects were identified.
SP2 Higher Town Sampford Peverell	The deletion of the criterion relating to the need to deliver this site following the commencement of development of the M5 Junction 27 allocation does not change the likely effects of this site on the SA objectives; however, bringing forward the delivery of the site would mean that **the effects previously identified would occur earlier in the Plan period**. No likely significant effects, either positive or negative, were identified for this site allocation post-mitigation. **The previously neutral (0) effect on SA objective H (health and wellbeing) is increased to a minor positive (+1) effect** as a result of the additional reference to active travel.
DM1 and new paragraph 4.5b	The proposed new criteria are brought into the policy from the now deleted policy DM12. The addition of these criteria to policy DM1 reinforces the already significant positive (+3) effects on SA objectives B (built environment) and C (climate change) as well as the positive (+2) effect on SA objective H (health and wellbeing) and **increases the positive (+2) effect on SA objective G (meeting housing needs) to significant positive (+3)**.
DM12	The proposed deletion of this policy means that **the effects previously identified in the SA will no longer occur as a result of policy DM12.** Likely significant positive (+3) effects were previously identified (post-mitigation) in relation to SA objectives B (built environment) and G (meeting housing needs). However, the policy criterion are now proposed to be incorporated into policy DM1; therefore **the likely effects will still occur as a result of that**

Local Plan Review policy (as proposed to be modified)	Change to SA findings previously identified in the 2015 SA Report and 2018 SA Update
	policy.

Cumulative effects

1.31 Although a small number of changes to SA effects would result from the Proposed Main Modifications, the changes to the SA findings (as summarised in **Table 3** above) do not fundamentally alter the cumulative effects of the Local Plan Review. Any effects that have changed have been made more positive as a result of the proposed modifications, and in most cases the changes are to the timescales over which likely effects already identified would occur. The overall scale of development proposed in the Local Plan Review, and the spatial strategy, are unaffected by the proposed modifications.

Monitoring

1.32 The 2015 SA Report which accompanied the examined Local Plan Review sets out indicators for monitoring the effects identified through the SA of the Local Plan Review. Having reviewed and appraised all the Proposed Main Modifications to the Local Plan Review, it is considered that the same monitoring indicators remain appropriate and no changes to the SA monitoring framework are proposed.

Next Steps

1.33 In LUC's professional judgement, the work carried out and presented in this SA Addendum is appropriate to meet the requirements of the SEA Regulations in relation to the Proposed Main Modifications.

1.34 This SA Addendum will be published alongside the Proposed Main Modifications to the Local Plan Review during a six week consultation period in early 2020.

1.35 Following the consultation, the Inspector will consider the representations raised in respect of the Proposed Main Modifications and will report on the modified Local Plan Review's soundness.

1.36 If the Local Plan Review is found to be 'sound', it can be formally adopted by Mid Devon District Council. Once the Local Plan Review has been adopted, a SA Adoption Statement will be published to report the full plan-making and SA process and the framework for monitoring future effects.

LUC
October 2019

Appendix 1
SA Framework

Table A1.1: SA framework for the Mid Devon Local Plan Review

Sustainability Objectives	Elements covered
A. Protection of the natural environment	Habitats and biodiversity; flora and fauna; protected species; landscape, geodiversity
B. Protection and promotion of a quality built environment	Heritage assets, including listed buildings, conservation areas, scheduled ancient monuments, registered parks and gardens, locally listed assets, archaeology; design and quality of development
C. Mitigating the effects of climate change	Reduced flood risk; promotion of low carbon or renewable energy; reductions in carbon emissions; resilience to climate change; walking and cycling provision; low carbon buildings
D. Safeguarding and minimising resource use	Quality of soils, including contaminated land; water quality, including consideration of water framework directive objectives; water resources; minimisation of waste; impact on best and most versatile agricultural land
E. Promoting economic growth and employment	Increasing jobs; reducing out-commuting; skills training; growth of rural businesses; tourism provision
F. Supporting retail	Safeguarding the vitality and viability of town centres; relationship between new development and town centres; supporting viability of shopping facilities in villages
G. Meeting housing needs	Supply of housing; housing mix; house size; housing affordability; appropriate housing density to location; proximity to services and facilities
H. Ensuring community health and wellbeing	Community support for proposals; access to open space and recreation; limiting air, noise and light pollution to levels that do not damage human health or natural systems; integrated and sustainable forms of travel including walking, cycling and public transport; social deprivation; safe and secure environments
I. Delivering the necessary infrastructure	Roads and transportation; schools; health services; community facilities; green infrastructure; telecommunications

Appendix 2
Baseline and Evidence Base Updates

Baseline information

1.1 Since the publication of the most recent version of the full SA Report (February 2015), the following additional evidence documents of relevance to the SA have been produced by or on behalf of Mid Devon District Council and are described below. They have been taken into account by the Council in both the preparation of the Proposed Submission (incorporating proposed modifications) version of the Local Plan Review and the SA work as appropriate.

1.2 All evidence relating to the Local Plan Review is available on the Council's website.

- Historic Environment Appraisal of Proposed Allocations (Mid Devon District Council, December 2016)
- Mid Devon Employment Land Review Update (Lichfields, April 2018)
- Cullompton Eastern Relief Road and Potential Strategic Motorway Improvement: Flood Risk Assessment (Arcadis, June 2018)

Historic Environment Appraisal of Proposed Allocations (Mid Devon District Council, December 2016)

1.3 This appraisal was prepared in response to a representation made by Historic England during the Proposed Submission consultation for the Local Plan Review. The document provides an assessment of heritage assets affected by proposed development allocations, assesses the level of harm arising and any mitigation proposed. Levels of effects were scored based on a traffic light system. The document was used by the Council to inform the Proposed Submission (incorporating proposed modifications) version of the Local Plan Review, by weighing the benefits of proposals against any harm (if arising) as required by national planning policy.

Mid Devon Employment Land Review Update (Lichfields, April 2018)

1.4 This document updated the Employment Land Review that had previously been prepared in 2013 by GL Hearn. Its purpose was to provide up to date evidence assessing the District's economic development needs. It concluded that the level of employment land need identified in the Local Plan Review was generally appropriate and consultation highlighted significant concern about the implications of providing for any lower level of employment land. A lack of available employment land and floorspace was deemed to be a significant concern and a potential risk to the future well-being of Mid Devon's economy.

Cullompton Eastern Relief Road and Potential Strategic Motorway Improvement: Flood Risk Assessment (Arcadis, June 2018)

1.5 This Flood Risk Assessment (FRA) was undertaken in relation to the construction of a relief road and motorway junction system to the east of Cullompton town centre. It concluded that the scheme is at risk of fluvial flooding but that it is at low risk of flooding from surface water, groundwater and artificial sources and it is not at risk of flooding from coastal sources. A detailed hydrological assessment of the Culm and its tributaries was carried out. The FRA demonstrated that the majority of the scheme will be safe for its lifetime and that suitable measures can be put in place to mitigate the risks for the locations that are at risk from flooding. A number of recommendations were made for the scheme including that flood risk mitigation measures should be refined as part of the detailed design process and that a drainage strategy should be prepared and submitted in support of the planning application.

Review of plans, policies and programmes

1.6 Since the publication of the Proposed Submission version of the Local Plan Review, the following national plans, policies and programmes have been updated/published that are relevant to the Mid Devon Local Plan Review:

- **National Planning Policy Framework (2019)[12]:** The NPPF sets out the government's planning policies for England and how these are expected to be applied. The original NPPF

[12] National Planning Policy Framework, MHCLG, 2019: https://www.gov.uk/government/publications/national-planning-policy-framework--2.

was published in March 2012[13], before being updated in July 2018. The latest version of the NPPF was published in June 2019. Notable changes made since the publication of the original 2012 version include:

- Design policies are considered instrumental in delivering new homes, and local planning authorities (LPAs) must make sure that the quality of approved developments does not materially diminish between permission and completion.
- Planning policies and decisions should promote the diversification of town centres as this is key to their long-term vitality and viability. They should clarify the range of uses permitted in such locations.
- Planning policies and decisions should promote effective use of land, giving substantial weight to the value of using suitable brownfield land. There is also support for upward extensions and for local authorities to take a positive approach to applications for alternative uses on land which is currently developed but not allocated.
- Planning policies and decisions should consider the social, economic and environmental benefits of estate regeneration. There is also additional recognition of the role that planning can play in promoting social interaction and healthy lifestyles.
- Clarity on the ways in which transport should be considered as part of the planning process from the earliest stages of plan-making and development proposals.
- Plans are to have regard to the cumulative impacts of flood risk, rather than just to or from individual development sites.
- Updates also align with the 25 Year Environment Plan, including taking air quality into account in planning policies and decisions.

- **National Planning Practice Guidance (NPPG)[14] :** The NPPG was last updated in July 2019. It now contains further guidance on how Green Belt openness and enhancement can be assessed, guidance on maintaining housing supply and delivery, and the effective use of land.
- **A Green Future: Our 25 Year Plan to Improve the Environment[15] :** This document was published in January 2018 and last updated in May 2019. It sets out government actions to help the natural world regain and retain good health. It aims to deliver cleaner air and water in our cities and rural landscapes, protect threatened species and provide richer wildlife habitats.
- **The Road to Zero[16] :** This document was published in July 2018. It puts the UK at the forefront of the design and manufacturing of zero emission vehicles and aims for all new cars and vans to be effectively zero emission by 2040.
- **UK Plan for tackling roadside nitrogen dioxide concentrations[17] :** This document was published in July 2017 and last updated in October 2018. It is the UK air quality plan for bringing nitrogen dioxide (NO_2) air pollution within statutory limits in the shortest possible time. It contains a number of actions to be undertaken across the UK.
- **Clean Air Strategy 2019[18] :** This document was published in January 2019, replacing the draft version published in 2018. It sets out what actions are required to tackle air pollution, such as Clean Air Zones. The will help ensure that targets set by government to tackle air pollution are met.

[13] For information: the Mid Devon District Council Local Plan Review 2013-2033 is being examined under the 2012 NPPF.

[18] Clean Air Strategy, DEFRA, 2019: https://www.gov.uk/government/publications/clean-air-strategy-2019.

- **Making the country resilient to a changing climate[19] :** This document was published by the National Adaptation Programme in July 2018 and replaces the previous version published in July 2013 that covered the period 2013 to 2018. This document covers the period 2018 to 2023. It sets out the actions the government is and will be taking to address the risks and opportunities posed by a changing climate.
- **Heritage Statement 2017[20] :** This document was published in 2017. It sets out how the government will support the heritage sector and help it to protect and care for our heritage and historic environment in coming years.
