

Notes to the Accounts

3 Material Items of Income and Expense

There were no material items this year.

4 Assumptions Made About the Future and Other Major Sources of Estimation Uncertainty

The Statement of Accounts contains estimated figures that are based on assumptions made by the Authority about the future or that are otherwise uncertain. Estimates are made taking into account historical experience, current trends and relevant factors. However because balances cannot be determined with certainty, actual results could be materially different from the assumptions and estimates.

The items in the Authority's Balance sheet at 31 March 2018 for which there is a significant risk of material adjustment in the forthcoming financial year are as follows:

Note	Item	Uncertainties	Effect if Actual results Differ from
23	Property, Plant and Equipment	Assets are depreciated over useful lives that are dependent upon assumptions about the level of repairs and maintenance that will be incurred in relation to individual assets. The current economic climate makes it uncertain that the Authority will be able to sustain its current spending on repairs and maintenance, bringing into doubt the useful lives assigned to assets.	If the useful life of an asset is reduced, depreciation increases and the carrying amount of the asset falls. It is estimated that the annual depreciation charge for buildings and plant based on a gross value of £39,662k (excl. Council Houses) would increase by £161k for every year that useful lives had to be reduced.
22	Pensions Liability	Estimation of the net liability to pay pensions depends on a number of complex judgements relating to the discount rate used, the rate at which salaries are projected to increase, changes in retirement ages, mortality rates and expected returns on pension fund assets. A firm of consulting actuaries is engaged to provide the Authority with expert advice about the assumptions to be applied. The value of pension assets is estimated based upon information available at the Balance Sheet date, but these valuations may be earlier than the Balance Sheet date. The actual valuations at the Balance Sheet date, which may not be available until some time later, may give a different value of pension assets, but this is not considered to be material.	The effects on the closing defined benefit obligation of changes in individual assumptions can be measured. For instance, a 0.1% increase in the discount rate assumption would result in a decrease in the closing defined benefit obligation to £119,953k and a 1 year increase in mortality rates would increase the closing defined benefit obligation to £126,852k. However the assumptions interact in complex ways.
4	Business Rates Appeals Provision	Estimates have been made for the provision for refunding ratepayers who have successfully appealed against the rateable value of their properties. This includes the current and previous financial years. The estimate is based on those ratepayers who have appealed.	There is uncertainty and risk surrounding the calculation of the provision as future events may affect the amount required to settle an obligation.
